Margins365 — QA & Testing Prompt v20.1

Version 20.1 — 11 November 2026, 20:55 Europe/London. Adds suite GAP (one test per gap GA-01–GA-66 in the Changes pack v20.1), the mandatory end-to-end matrix (suite E2E: real Stripe test-mode accounts, Stripe Dashboard checks and SES email receipt for every flow), the release gate RG-1–RG-4 and exit criteria 18–19.

Full-site build verification: is everything built, and does it all work?

For	QA & Testing team
From	Business & Product (on behalf of Akthar Uddin)
Date	11 November 2026 (Europe/London)
Baseline	**Product Specification v20 FINAL** (`/workspace/v20.1/Margins365-Spec-v20.1.md`, version 20.1, K1–K90, the release gate in 23.22, including section 23, the product architecture, 23.19 for K80–K86, 23.20 for K87 and 23.21 for K88–K90), the SEO spec v20 (K75–K79), the v20 legal documents, and the v19 acceptance tests it keeps
Status	Ready to run. All v20 decisions are made (section 3.3); K84's visitor confirmation without message text awaits Akthar's OK
Test cases	640 (35 added on 11 Nov 2026 for K80–K86 and fix D-1: suite MOB 13, NAV 4, HELP 8, AUTH 5, EML 4, OFF 1; 8 added for K87: HELP-25–HELP-32; 23 added for K88–K90: HELP-33–HELP-37, CAN-14–CAN-25, CHK-43–CHK-46, EML-26–EML-27; v20.1: 66 GAP and 23 E2E tests)

---

1. Your brief (read this first)

You are the QA & Testing team for **Margins365**, a subscription web app at **https://margins365.com**. It shows online sellers (Shopify, Amazon, Etsy) their true profit, a Health Score from 0 to 100, and the margin leaks that cost them most, ranked in pounds.

Your job is to **prove, with evidence, that every feature in the spec has been built and works end to end**. That covers the public site, sign-in, checkout and billing, shops and seats, imports, the calculations, the Control room, cancellation and data deletion, emails, the legal documents, every device size and security. Do not assume something works because it shows on screen. Many features can look finished while the server does nothing behind them.

How to work

1. **Test against the spec, not against the current build.** Where the build and this prompt disagree, raise a defect. Do not "fix" the expected result to match the build.
2. **Evidence for every result.** Each Pass or Fail needs a screenshot or video, the URL, the device and browser, the account used and the time (Europe/London). A Pass with no evidence counts as Not run.
3. **Check what happens behind the screen.** For anything involving money, limits, permissions or deletion, confirm what the server and Stripe did (Stripe test dashboard, the email received, the database or admin view, network requests). A message on screen is not proof.
4. **Try to break it.** Every suite includes boundary, error and abuse cases. Run them all, not just the happy path.
5. **Never test on real customer data or real cards.** Use Stripe test mode and the test accounts in section 5. The only live-mode checks are the low-risk ones in suite CHK, run by Akthar or with his written go-ahead.
6. **Do not change the spec or contact customers.** Raise questions through the defect log, tagged `SPEC-QUESTION`.
7. **Use plain English** in defect reports. Each report should make sense to someone who has not seen the screen.

Result codes: Pass · Fail · Blocked (the test can't run, give the reason) · Not applicable (give the reason).

Priority (use on test cases and defects)

Priority	Meaning	Examples
P0 — Critical	Money, legal, privacy, security or data loss. Or a core journey can't be completed. Blocks release.	Wrong amount charged; cancelled trial still charged; another account's data visible; legal page missing; sign-up impossible
P1 — High	A required feature is missing or broken, with no reasonable workaround. Blocks release.	Shop switcher missing on Scale; refresh drops you on Home; contact form doesn't send
P2 — Medium	A feature works only partly, or has a workaround; wrong copy that changes meaning; an accessibility failure off the core journeys	Wrong error text; one breakpoint has clipped text
P3 — Low	Cosmetic, or a minor wording issue that doesn't change meaning	Spacing; inconsistent capitalisation

---

2. Scope

In scope: everything a visitor, trial user, paying customer, team member or administrator can see or do on margins365.com. That includes the server, Stripe, Amazon SES email, Google sign-in, the legal documents, the old marginos.online domain, and the data lifecycle from upload to deletion.

Out of scope for this pass:

- the TikTok Shop UK Excel importer. It stays "coming soon" (K53). Test only that public copy says so (suite IMP).
- post-launch candidates in spec 9.2 (weekly email, ad connections, alerts, accountant export). Raise a defect if any of them appears on the site.
- penetration testing by an outside firm. This prompt covers in-house security checks only.

---

3. What you are testing against

3.1 Sources, in order of precedence

1. **Product Specification v20 FINAL**, and especially **section 23 (product architecture)**: the route map, account menu, shops, seats and invites, Info, onboarding, Control room, upload, Plan & billing, trial lifecycle, cancellation, Help centre, emails and data retention. Its acceptance IDs (IA-, SH-, ST-, IN-, ON-, CR-, UP-, PB-, TR-, CA-, HC-, FO-, LG-) are referenced throughout. Where v20 and v19 disagree, v20 wins. K64 and K65 replace the 7 Nov 2026 Help centre and footer handoff.
2. **The v20 requirements summarised in section 3.2** (K59–K74).
3. **The v19 sections that v20 carries forward unchanged**, including sections 3, 5, 6, 10, 12 (calculations, limits, subscriptions, cancellation, deletion), 15 (devices and UX), 16 (imports and fees), 17 (sample data) and 22 (brand). The spec's own acceptance IDs (L1–L17, S1–S75, D1–D13) are referenced throughout.
4. **SEO & Discoverability Spec v20** (`/workspace/v20.1/Margins365-SEO-v20.1.md`, K75–K79) and spec 23.14–23.18 for suites SEO, PCALC, CONS and ANL: exact titles, descriptions, robots, sitemap, redirects, structured data and speed targets.
5. **Legal documents** (Terms, Privacy Policy, Refunds & cancellation, DPA & subprocessors). Akthar has approved them, judged against UK and EU rules. They must match what the product actually does.

3.2 v20 requirements (approved by Akthar, 11 Nov 2026)

Ref	Requirement
V1	**Brand:** "Margins365" is written as one word everywhere: site, page titles, meta and Open Graph tags, emails (subject, body, From name), PDFs, legal documents, Stripe (product names, Checkout, receipts, statement descriptor where Stripe allows) and the SES From name. No

Ref	Requirement
	"Margins 365", "MarginOS" or "MarginSeam" is shown to customers.
V2	**Header navigation:** exactly three items, **Home**, **Sample shop** and **Pricing**. "Sample report" is renamed "Sample shop" everywhere.
V3	**Home "Start here":** the green area at the bottom of Home is titled "Start here" and keeps its three buttons. **Compare plans** and **Sample shop** swap positions.
V4	**Scroll to top:** every navigation (header, footer, buttons, links, browser back and forward to a new page) lands at the **top** of the new page. The exceptions are in-page anchors, such as the Pricing header button that scrolls to the plans.
V5	**Real routes and refresh:** every page has its own URL. Refresh keeps you on the same page. Deep links work. Back and forward work. Signed-in pages survive a refresh while you stay signed in.
V6	**Footer:** shows "© 2026 Margins365. All rights reserved." The year updates each year. The sentence "Margins 365. Plans from £39/month including VAT after trial. Cancel in Plan & billing — there is no email cancellation route." is removed with nothing in its place. There is no **Contact** link. The Legal column has Terms, Privacy, Refunds & cancellation and DPA / subprocessors. The Help column has Help centre and Sign in. Every link works.
V7	**Help centre page (new, public):** holds the **Hard limits & billing FAQ** (moved from Pricing) and a **contact form**.
V8	**Contact form (23.11):** Name (required), Phone (optional), Business name (optional), Email (required), Country (required, from a list), Message (required, 10–5,000 characters). Each submission is stored, then sent through SES to **info.marginos@gmail.com** with reply-to set to the visitor. A **confirmation without the message text is emailed to the visitor** (K84). A confirmation **pop-up** appears. Spam protection is a honeypot plus a minimum fill time. Limits are 5 per IP and 3 per email per hour. Messages are kept for 12 months.
V9	**Sample shop page (K66):** the green button in the opening section reads **"Start your own shop"** (signed out), **"Choose a plan"** (signed in with no plan) or **"Go to Control room"** (trial or paid). At the bottom of the first dashboard section is a **shop-icon button**, at least 44×44 px, whose accessible name and tooltip are **"Open Sample Shop"**. It opens `/app/sample` (after sign-in if you're signed out). The signed-out header primary stays "Start 14-day free trial".
V10	**Signed in with a trial or a paid plan:** "Start 14-day free trial" appears **nowhere** (header, banner, pages, footer, emails' calls to action).
V11	**Top-right green button** shows the **business name** and opens the account menu (23.1). Until

Ref	Requirement
	a business name is saved it shows the user's first name, then the email.
V12	**On Scale**, that button also holds the **shop switcher**: list the shops, switch between them, add a shop up to the limit.
V13	**The account menu** has **Info** and **Control room**. The Control room is **one click** away from every signed-in page, through the menu and through the logo (which goes to `/app` when you're signed in).
V14	**Signed-in identity** is the **business name**, not the email, everywhere the user is identified (header, menus, sidebars, team list for the owner's own row, email greetings).
V15	**Shops and multi-shop (23.2):** Starter, Growth and Pro get 1 shop. Scale gets up to 3. Add, rename, switch and remove, plus an "All shops" view on Scale. The order limit is counted **across the whole account on every plan**. Platform slots apply per shop.
V16	**Seats, roles and invites (23.3):** Starter 1, Growth 1, Pro 2, Scale 5. Pending invites count as seats. Invites expire after 7 days. One owner per account. The permissions are in the 23.3 table. A person belongs to one account at a time.
V17	**Trial = the tier selected.** A Starter trial gets Starter features and Starter's limits, and the same for every tier. This **reverses K52** (the Pro reverse trial). Keep Pro, the Pro trial label, "Every trial includes Pro features" and the "features that will lock" reminder list are all removed.
V18	**Info (23.4):** required: your name, business name, country, email, home currency and time zone. Optional: phone, business address, VAT number, website. Sign-up asks only for email and password (or Google) plus acceptance of the Terms. The rest is collected in first-run (23.5).
V19	**Cancellation reason (23.10):** an optional "Why are you cancelling?" picker with 8 options, plus optional free text of up to 500 characters, on the single confirmation screen. It never blocks or slows down cancelling.
V20	**Founding offer (12.5C):** monthly payments 1–6 at 50% (£19.50 / £39.50 / £64.50 / £99.50), then the full price. Annual: 25% off the first year (£292.50 / £592.50 / £967.50 / £1,492.50), then the full price. 100 places, one per account. A place is **reserved** at trial start, **confirmed** at the first payment, and **released** on trial cancellation, final failure of the first payment, or a first-payment refund. The count is enforced on the server and transactional. The display shows the real "[n] places left". A "Founding price ends soon" email goes 14 days before the first full-price payment. Reverses K42.
V21	**Retire marginos.online:** move fully to margins365.com. No customer-facing reference to

Ref	Requirement
	marginos.online is left in links, emails, Google OAuth, Stripe or SES.
V22	**Legal documents on the site:** Terms, Privacy Policy, Refunds & cancellation, DPA & subprocessors, and a Cookie notice (if cookies or similar storage are used) are published. They can be read **before sign-up and at checkout**, without signing in or paying. A customer-specific signed DPA may sit behind sign-in. Each document shows its version and effective date and matches the live product.
V23	**SEO and discoverability (K75, approved 11 Nov 2026, 14:38):** public pages are prerendered HTML with their own title, description, H1, canonical, Open Graph/Twitter tags and JSON-LD; real `<a href>` links; robots.txt, XML sitemap and real 404s; one canonical host with 301 redirects; favicon set and manifest; Core Web Vitals "good" on mobile; Search Console and Bing verified. Details: SEO spec v20.
V24	**Free public calculators (K76, Phase 2):** Etsy UK, Amazon UK, Shopify UK and ecommerce margin calculators that use the product's own calculation module and 16.2 presets; nothing entered leaves the browser (spec 23.15).
V25	**Landing pages and help articles (K77, Phase 2):** `/profit-leak-checklist`, `/multi-channel-profit` and `/help/<topic>` articles; **no competitor comparison page** (spec 23.16).
V26	**Home H1 (K78):** "Know your true profit and where it leaks" (spec 23.17).
V27	**Analytics and consent (K79):** Plausible Analytics on public pages only after "Accept analytics"; equal Accept/Reject; Cookie settings in the footer; legal texts v20.1 (spec 23.18).
V28	**Phones and pop-ups (K80):** every pop-up fits the visible screen, scrolls inside, keeps its buttons reachable and locks the page behind; site-wide mobile check (spec 23.19.1).
V29	**Banner removed (K81):** no "14 days free. Cancel before day 14 and pay nothing. From £39/mo" banner anywhere; trial terms stay on Pricing, the plans pop-up and Checkout (23.19.2).
V30	**Open at the top, instantly (K82):** every page change lands at the top with no animated scroll (23.19.3).
V31	**Suggest a feature (K83)** is stored and emailed to info.marginos@gmail.com with account context (23.19.4).
V32	**Contact us (K84)** is sent server-side to info.marginos@gmail.com signed in and out; the visitor gets a confirmation without the message text; in-page pop-up; spam protection (23.19.5).
V33	**Forgot password (K85)** works end to end with no browser-only fallbacks and a server-built

Ref	Requirement
	margins365.com link (23.19.6).
V34	**Email (K86):** SES identity verified, DKIM and MAIL FROM successful, production access, every email passes SPF, DKIM and DMARC (23.19.7).
V35	**FAQ on Pricing and Help centre (K87):** the 15-question Hard limits & billing FAQ (spec 3.2) shows in full on Pricing and grouped in the Help centre, from one source; links to Suggest a feature and Contact us; Pricing FAQ buttons use “Open Sample Shop” (23.20).
V36	**Contact wording (K88):** pop-up, line under Send, intro and confirmation email say “Thank you for contacting us, we aim to respond within 24 hours.”; no “promise a reply time” disclaimer anywhere (23.21.1).
V37	**Cancellation really cancels (K89):** Stripe shows `cancel_at_period_end` (or canceled) with no upcoming invoice before any success; confirmation pop-up; one SES email; server-backed “Cancelled — access until” status with Stripe line; Resubscribe; failure pop-up; audit log; webhook sync (23.21.2).
V38	**Trial-start confirmation (K90):** one SES email and a pop-up, only after the server confirms the trial, with plan, trial end, first charge to the penny incl. VAT, founding then full price, order limit and the Plan & billing cancel route; nothing on failure (23.21.4).

3.3 Decisions made since the first draft

- **Founding offer (V20, K72):** fully defined in spec 12.5C, including annual handling and the rules for reserving and releasing places.
- **Sample shop buttons (V9, K66):** the text is decided.
- **Full functional design:** spec v20 section 23. Wherever this prompt says "per the v20 design", use section 23. If a detail isn't defined there, log a `SPEC-QUESTION` rather than guessing.

3.4 Known gaps on the live site today (11 Nov 2026), expected to fail until rebuilt

Business & Product found these on the live site and in its published code bundle. Re-test them first. Each is an **expected failure** until Development says it is fixed.

#	Known gap	Tests
G1	**No URL routing.** Every path returns the same app shell, and refresh returns you to Home. robots.txt, sitemap.xml and unknown paths all return the home page HTML with status 200. There is no real 404.	NAV-10–NAV-20, ERR-01
G2	**No scroll-to-top** when the page changes. You land where you were on the	NAV-21–

#	Known gap	Tests
	previous page.	NAV-27
G3	**No screen to add or switch shops, and no seat invite screen**, in the live bundle. The plan settings say 3 shops and 5 seats on Scale, but nothing lets you use them.	SHOP-*, SEAT-*
G4	**The footer links are plain text, not links.** Help centre, Contact, Terms, Privacy, Refunds & cancellation and DPA / subprocessors all do nothing. Only Sign in works.	FTR-*, LEG-*
G5	**The old footer sentence "…Plans from £39/month… no email cancellation route" is still live, and there is no copyright line.**	FTR-02, FTR-03
G6	**The brand still has a space** ("Margins 365") in the page title, meta description and copy.	BR-*
G7	**Product data appears to be stored in the browser** (localStorage keys `marginos.v6`, an audit log and token stores), with no server endpoints for uploads, shops, seats, cancellation, the billing portal, data export or the contact form. If so, seats, cross-device use, tenant isolation, server-side order counting and guaranteed deletion **cannot** work. Development must confirm.	SEC-*, LIM-*, SEAT-*, DEL-*
G8	**The Confirm cancel step seems to run only in the browser.** No server or Stripe cancel request was found.	CAN-*, CHK-*
G9	**The Stripe webhook resets ended subscriptions to a "free" plan.** The Free plan was retired in v18.	CHK-30, DEL-*
G10	**No security headers** (HSTS, CSP, X-Frame-Options, nosniff, Referrer-Policy) on the HTML response.	SEC-20–SEC-24
G11	**The old founding-price fields are still in the price settings**, and the earlier sample figures disagreed (Health 69 against 36, margin 14.2% against 12.4%).	OFF-*, CALC-20–CALC-24
G12	**A Cloudflare cookie (`__cf_bm`) is set and localStorage is used**, but there is no cookie notice.	LEG-30–LEG-33, PRIV-10
G13	**Not search-ready** (SEO audit, 11 Nov 2026): every address returns the same empty HTML shell with the same title ("Margins 365 — margin leak diagnosis"); 0 `<a href>` links (all navigation is buttons); robots.txt, sitemap.xml, favicon.ico and	SEO-*

#	Known gap	Tests
	unknown paths return Home with 200; no canonical, Open Graph, structured data or manifest; www and non-www both serve 200; hashed assets not cached; Lighthouse mobile LCP 2.9 s.	
G14	**Pop-ups can't scroll on phones** (checked 11 Nov 2026, 17:30): at 390 × 664 the plans pop-up is 1,541 px tall, its top is 893 px above the screen, swipes scroll the page behind, and on iPhone Safari the Start 14-day free trial button is cut off. The same shared containers are used by every pop-up. The cookie banner sits above pop-ups.	MOB-01–MOB-09
G15	**The "14 days free… From £39/mo" banner is on every public page**, signed in or out; header plus banner take 199 px of a 664 px phone screen.	MOB-11, MOB-12
G16	**Pages can open at the bottom on iPhone:** whole-page smooth scrolling turns the jump to the top into an animation that Safari can stop part-way.	NAV-33–NAV-35
G17	**Suggest a feature is stored only**; no email to info.marginos@gmail.com.	HELP-17, HELP-18
G18	**Account actions fall back to a browser-only demo** when the server errors (reset shows success with no email; sign-in can appear signed in). The reset link is built from a browser-supplied origin (server code). `/reset-password` is 404.	AUTH-21–AUTH-25
G19	**Contact form:** no honeypot or fill time; browser alert box instead of the pop-up; 4,000-character limit; delivery to info.marginos@gmail.com unproven.	HELP-20–HELP-24
G20	**SES status unproven:** no apex SPF, DMARC `p=none` without reports, DKIM records not visible from outside, sandbox status unknown. Founding prices also show rounded (£40 instead of £39.50, D-1).	EML-22–EML-25, OFF-17
G21	**FAQ (checked 11 Nov 2026, 18:30):** Pricing shows 14 questions with stale answers (“sample report”, “We save it for review”, no founding offer, SES location missing, shops and seats sentences repeated); the Help centre shows 4 different, overlapping questions; the button under the Pricing FAQ says “View sample report” and a trial button shows even when signed in.	HELP-25–HELP-32

#	Known gap	Tests
G22	**Cancellation does not cancel (checked 11 Nov 2026, 19:30–20:15):** Confirm cancel changes the browser only; no server cancel route exists (probes return 405 like a made-up address); Stripe stays Trialing and would charge at trial end; no email; the success text is small grey text in the Profile & sign-in card, off screen; the state reverts on another device. Confirms G8. Contact pop-up says “we can't promise a reply time” (K88).	CAN-14–CAN-25, EML-26, HELP-33–HELP-37
G23	**No trial-start confirmation (checked 11 Nov 2026):** SES sends only email verification; the Stripe webhook sends nothing; the return from Checkout shows no confirmation of the trial, end date or first charge.	CHK-07, CHK-43–CHK-46, EML-05, EML-27
G24	**Gap audit 11 Nov 2026 (v20.1):** 66 gaps (23 P0) — browser-only features (cancel, product data, order limits, audit log, Info fields, cancellation reason, demo sign-in fallback), missing Stripe flows (plan change, portal, webhooks, founding coupon unproven), 10 missing emails, no data wipe or account closure, no seat accept route. See Changes pack v20.1.	GAP-01–GAP-66, E2E-*

---

4. Test environment

Item	Requirement
Environments	**Staging** (a copy of production, with Stripe test mode, an SES sandbox or verified test inboxes, a test Google OAuth client and a separate database) for every destructive, billing and deletion test. **Production** for the read-only crawl, brand audit, headers, legal pages, the redirect and the responsive screenshots. Live-money checks run only as CHK-40–CHK-42, with Akthar's go-ahead.
Clock control	You must be able to move time forward: Stripe **test clocks** for trials, renewals, retries and annual periods, plus a server-side way to run scheduled jobs (deletion, reminders, abandoned imports) on demand. Without clock control, the trial, reminder and deletion suites are Blocked.
Admin access	A read-only admin view or database access for: entitlement records, order usage sets, shops, seats, contact submissions, feature suggestions, cancellation reasons, the founding-offer counter and deletion tombstones.
Email	Test inboxes for Gmail, Outlook.com and Apple iCloud, plus one inbox on a custom domain. Raw headers must be viewable (to check SPF, DKIM and DMARC). Use a

Item	Requirement
	dark-mode mail client for some checks.
Devices (15.3)	A recent iPhone (Safari), an Android phone (Chrome, plus Samsung Internet), an iPad in portrait and landscape (Safari), and Windows and macOS desktops.
Browsers (15.1)	The latest two versions of Chrome, Safari, Edge and Firefox, the latest Samsung Internet, and in-app browsers (Instagram and Facebook) for the Google sign-in fallback.
Viewports (15.5)	320×640, 390×844, 768×1024, 834×1194, 1024×768, 1194×834, 1280×800, 1440×900 and 1920×1080.
Tools	A link crawler, Lighthouse/WebPageTest, axe DevTools plus manual screen readers (VoiceOver on iOS and macOS, NVDA on Windows, TalkBack on Android), browser devtools (network, storage, cookies), an HTTP client for API and permission checks, mail-tester or similar, and DNS lookup tools.

5. Test accounts and data

5.1 Account matrix

Create these on staging. **Each tier** (Starter, Growth, Pro and Scale) needs each **state**:

State	How to create it	Notes
Signed out	—	A new private window
Signed in, verified, no plan	Sign up without checkout	Must still see "Start 14-day free trial" (15.4)
Signed in, unverified	Sign up and don't verify	Uploads and checkout locked
Trialing (monthly)	Checkout with a test card	Day 1, day 11 (reminder) and day 14 using a test clock
Trialing (annual)	As above, annual	
Paid active (monthly / annual)	Advance the test clock past day 15	

State	How to create it	Notes
Paid with founding 50% (one of the first 100)	Start checkout while the counter is below 100	Seed the counter in staging
Paid at full price (101st or later)	Seed the counter to 100 first	
Past due (in retry)	Test card that fails at renewal (`4000 0000 0000 0341`)	
Cancelled, access still running	Cancel in Plan & billing	
Ended / closed	Advance the clock past the access end	Login must be gone
Legacy lifetime	Seed a legacy entitlement	No subscription to cancel (D11)

Roles: an Owner on every tier. A **Member** on Pro (1 member) and Scale (4 members, to fill 5 seats). One **pending invite**. One **removed member**.

Sign-in methods: email and password; Google only; Google linked to an existing email account; an unverified Google email (must be refused as verified).

Scale shops: 3 shops with different platform mixes (Shopify only; Amazon and Etsy; all three).

Two separate accounts (Account A and Account B) for the isolation tests.

5.2 Test files (keep them in a shared QA folder; never use real buyer data)

For **Shopify** (Orders CSV and the optional Payments transactions CSV), **Amazon** (Custom Unified Transaction CSV: UK, US and a German translated file) and **Etsy** (Orders CSV, Order Items CSV and the optional Monthly Statement):

- **Valid:** a small file of about 50 orders; a medium file of 1,000; exact boundary files of 499, 500, 501, 1,999, 2,000, 2,001, 4,999, 5,000, 5,001, 14,999, 15,000 and 15,001 unique orders; a file with 2 lines per order (L5); and an overlap file where 100 of 600 orders already exist (L6).
- **Invalid:** a required column missing; headers in a different column order; an unrecognised language; a wrong file type (`.xlsx` renamed `.csv`, `.pdf`, `.exe` renamed `.csv`); an empty file; headers only; every row invalid; a mix of valid and invalid rows; a corrupt encoding; a UTF-8 BOM; EU decimal commas; Etsy "--" amounts; several date formats; amounts with currency signs and thousands separators.
- **Huge:** exactly 100 MB and 100.01 MB; exactly 50,000 rows and 50,001 rows (Q10 defaults).
- **Duplicates:** the same file uploaded twice; the same orders in a different file; a refund-only

row for an existing order.

- **Personal data:** a file containing buyer name, email, phone, address, city, postcode, company, tax ID, gift message and order notes. Seed each field with a unique marker such as `QA-PII-EMAIL-7731` so you can search for it later.
- **Security:** a CSV with formula injection (`=HYPERLINK(...)`, `+cmd`, `@SUM`), with HTML or script in product names, and a zip-bomb-style XLSX.
- **Calculation fixtures:** the worked examples in suite CALC, each with its expected results calculated by hand and signed off by Business & Product before you run them.
- **Stripe test cards:** `4242 4242 4242 4242` (succeeds); `4000 0025 0000 3155` (3-D Secure); `4000 0000 0000 9995` (insufficient funds); `4000 0000 0000 0341` (attaches, then fails when charged); `4000 0000 0000 0002` (declined).

---

6. Test suites

Each test lists its **ID**, **priority (P)**, **what to do**, the **expected result** and the **spec reference**. Run every test on desktop Chrome first, then on the device matrix where the test or suite RESP says so.

Suite PUB — Public pages, inventory and every link

ID	P	What to do	Expected result	Ref
PUB-01	P0	Signed out, open every public route: Home, Sample shop, Pricing, Help centre, Sign in, Terms, Privacy Policy, Refunds & cancellation, DPA & subprocessors, Cookie notice, and the password-reset request and reset pages.	Each has its own URL, loads with status 200, has a unique `<title>` and meta description containing "Margins365", and shows the right content (not the app shell or Home).	10.1.3, 15.1, V5, V22
PUB-02	P0	Crawl the whole site, signed out and then signed in as a Scale owner (follow every `<a>`, button target and footer link, including the PDFs).	Zero 404s, zero 5xx errors, zero links to marginos.online, zero `href="#"` or empty targets, zero dead elements styled as links. Export the crawl report as evidence.	V6, V21, G4
PUB-03	P1	For every button and link on every public page, record its label → where it actually goes → where it should go (build a link map).	Every target matches the label. "Sample shop" goes to the Sample shop page. "Compare plans" goes to the Pricing comparison. "Start 14-day free trial" goes to sign-up or checkout. Sign in opens sign-in.	15.4, V2, V3
PUB-	P0	Signed out, look for account controls on	None appear. Signed-out API calls (for	5, 10.1.9

ID	P	What to do	Expected result	Ref
04		every public page (upload, Start fresh, billing, export, account settings, Control room).	example `/api/auth/me`) return no account data.	
PUB-05	P1	Home: check the content against 17.5–17.7. That means the differentiation line "Built for single or multi-platform sellers (Shopify, Amazon, Etsy, TikTok coming soon).", the hero sample card, the centred Product section with the headline "See where your profit is leaking.", the six cards with (i) tooltips that open with a tap, Get Started directly under Tools with the two questions, and the "Start here" green area.	All present, word for word. Tooltips and both questions open with a tap or keyboard, not hover only. No "Paid plans unlock the full score breakdown".	S31, S34, S49–S51, S60, V3
PUB-06	P1	Home "Start here" area: check the title, the three buttons and their order, signed out and then signed in on a trial or paid plan.	Titled "Start here". Exactly three buttons, with **Compare plans** and **Sample shop** swapped compared with v19. Signed out, there is one visual primary, "Start 14-day free trial". On a trial or paid plan, the trial button becomes **"Go to Control room"**. Each button goes to its target and lands at the top (V4).	K61, 17.7, 15.4
PUB-07	P1	Pricing: four cards with a monthly/annual toggle; Pro shows "Command centre" above "Most popular"; VAT-inclusive amounts (£39/£390, £79/£790, £129/£1,290, £199/£1,990); the full comparison matrix from 3.1, grouped; Shops and Seats as plain sub-text with no (i) or "?"; no Support target or Email support rows.	All match. **The Hard limits & billing FAQ is no longer on Pricing.** It is on the Help centre (V7). A link to it from Pricing is allowed.	3, 3.1, S53–S55, S62–S63, V7
PUB-08	P0	Pricing copy after V17: search Pricing, the comparison and the cards for "Every trial includes Pro features", "try Pro", "Keep Pro" and the comparison	None of them appears. Trial copy says the trial gives the plan you choose.	V17

ID	P	What to do	Expected result	Ref
		row "14-day free trial includes Pro features".		
PUB-09	P1	Pricing header "Start 14-day free trial" (signed out).	Scrolls to the plan cards and focuses Pro. This in-page scroll is the allowed exception to V4.	S53, 15.4
PUB-10	P0	Pricing with the founding offer: check that the cards and the comparison show the founding offer honestly (see suite OFF).	The full price and the 50% price are both clear, the 6-month length is stated, and the price from month 7 is stated. The offer disappears once 100 paying users are reached.	V20
PUB-11	P1	Sample shop page (`/sample-shop`, formerly Sample report): the heading "What a Margins365 diagnosis looks like", the centred opening section and the first dashboard layout. Check the green opening-section button signed out, signed in with no plan, and on a trial or paid plan. Check the shop-icon button at the bottom of the first dashboard section. Check the header primary.	The opening button reads **"Start your own shop"** (signed out: goes to sign-up, then Choose a plan), **"Choose a plan"** (no plan) or **"Go to Control room"** (trial or paid). The shop-icon button has the accessible name **and** tooltip "Open Sample Shop", is at least 44×44 px with a visible focus ring, and opens `/app/sample` (after sign-in if signed out). The signed-out header primary stays "Start 14-day free trial". Labelled "Sample data".	K66, S52, S61
PUB-12	P1	Search all public copy for "Sample report".	No matches (page titles, nav, buttons, footer, FAQs, emails, meta and alt text included). Every one now reads "Sample shop".	V2
PUB-13	P0	Search all public copy for TikTok.	Only "TikTok Shop UK (Beta): Excel import coming soon" (and the K56 line). No export instructions, no TikTok upload option or chip, and TikTok is not counted in platform slots (1 of 3 / up to 2 of 3 / All 3).	K53, S47, Q32
PUB-14	P1	Search all copy for retired claims: Free plan, Free countdown, upload counter, lifetime, "yours for life", "No subscription", early-bird, the 25% offer,	None found. (The v20 founding 50% offer is now allowed, but only in its approved form.)	22.12.8, K41, K46, K50, V20

ID	P	What to do	Expected result	Ref
		Support target or SLA, "Start trial" or "Start free trial" (mixed labels), "Card required. Cancel before day 14 to pay nothing.", any invitation to email or reply to cancel, and "Delete account".		
PUB-15	P1	Sticky banner (removed by K81).	**No** sticky banner on any page, signed in or out (the K43 banner "14 days free. Cancel before day 14 and pay nothing. From £39/mo" is retired). See MOB-12.	K81, V29
PUB-16	P2	Open Graph and Twitter card tags, the canonical URL and the favicon on every public page.	og:title and og:site_name are "Margins365". The canonical is `https://margins365.com/...`. The image loads. The teal M favicon is used.	V1, V21, 22.6
PUB-17	P2	robots.txt and sitemap.xml.	They return real text and XML files (not HTML). The sitemap lists only public routes on margins365.com. Signed-in routes are disallowed or noindex. Full checks in SEO-08 and SEO-09.	V5, G1, V23

Suite FTR — Footer

ID	P	What to do	Expected result	Ref
FTR-01	P1	On every page that uses the shared footer, signed in and signed out, at phone, iPad and desktop sizes: list the footer columns and items.	Legal: Terms, Privacy, Refunds & cancellation, DPA / subprocessors, Cookies and (once K79 ships) Cookie settings. Help: Help centre, Sign in (or Account when signed in). No Contact link. Navigation column (if present) uses Home, Sample shop and Pricing.	V6, F1
FTR-02	P1	Search every page's footer for "Plans from £39/month including VAT after trial".	It is absent, with no replacement marketing sentence.	V6, F2, G5
FTR-03	P1	Check the copyright line.	Exactly "© 2026 Margins365. All rights reserved." Move the staging server clock to 2027, and only the year changes.	V6, G5
FTR-	P0	Click every footer link.	Each opens the correct document or page (see	V6, G4

ID	P	What to do	Expected result	Ref
04			LEG for PDF behaviour), with no dead text. It lands at the top of the target page (V4).	
FTR-05	P1	Footer legal links when signed out.	They open the public legal pages. No "Sign in to view documents" wall in front of mandatory information (see LEG-04).	V22, F10
FTR-06	P2	Footer focus order and screen-reader names.	Every link is reachable by keyboard in a logical order, has a visible focus ring and is announced with a meaningful name. Targets are at least 44 px.	15.1, WCAG 2.4.4, 2.5.8

Suite BR — Brand string audit ("Margins365", one word)

ID	P	What to do	Expected result	Ref
BR-01	P1	Run a full-text search of the rendered HTML on every public and signed-in page for `Margins 365`, `Margins-365`, `MarginOS`, `Marginos`, `MarginSeam` and `margins 365` (case-insensitive).	Zero customer-visible matches. Only "Margins365".	V1, S73
BR-02	P1	Page `<title>` and meta description on every route.	They use "Margins365". The current title "Margins 365 — margin leak diagnosis" is gone.	V1, G6
BR-03	P1	Every transactional email (suite EML): From display name, subject, greeting, body, footer and logo alt text.	Each uses "Margins365". The From name is "Margins365".	V1, 22.8
BR-04	P1	The PDF report (Growth, Pro, Scale): header wordmark, footer `PRODUCT_NAME` and file metadata (Title, Author, Producer).	"Margins365" throughout.	V1, 22.8
BR-05	P1	Legal documents (HTML and PDF): title, body, headers, footers and file names.	"Margins365" one word, including the defined terms ("Margins365", "we", "us").	V1, V22
BR-06	P1	Stripe test mode: product and price names, the Checkout page heading, the customer portal business name, receipt and invoice emails, the invoice PDF, and the statement descriptor.	"Margins365" wherever Stripe shows it. If the statement descriptor still reads `LINK.COM* MARGINOS` (set by Link or Managed Payments), log it as a defect tagged `EXTERNAL-CONFIG` for Akthar to change in	V1, V21, 20.5.5

ID	P	What to do	Expected result	Ref
			Stripe.	
BR-07	P1	Google sign-in consent screen: app name, logo, and the homepage, privacy and terms links.	The app name is "Margins365" and the links point to margins365.com.	V1, V21, 20.3
BR-08	P2	Browser tab title, PWA or apple-touch names, image alt text, aria-labels and the visually hidden text for the header logo.	"Margins365".	V1
BR-09	P2	Error, validation and toast messages, and the 404 page.	Any product name reads "Margins365".	V1
BR-10	P3	Internal identifiers (CSS `--mo-*` tokens, localStorage keys, repo paths).	Allowed by K58 as long as they are never shown to customers. List any you find in the report so Akthar can decide.	K58, V21

Suite NAV — Navigation, routes, refresh, scroll and how intuitive it is

ID	P	What to do	Expected result	Ref
NAV-01	P1	Signed out, check the header on every public page.	The logo goes to Home. Nav is exactly **Home · Sample shop · Pricing**. One primary button, "Start 14-day free trial". Sign in is secondary. The current page is marked (for example with `aria-current="page"`).	V2, 15.4
NAV-02	P1	Phone header (≤430 px).	Icon-only logo (28 px). The menu reveals the same three items. The menu can be operated by keyboard and screen reader, focus is trapped while it is open, and Escape closes it.	22.6, 22.9, V2
NAV-03	P0	Signed in on a trial or paid plan, on every public and signed-in page: look for "Start 14-day free trial" (header, sticky banner, Home "Start here", Sample shop page, Pricing cards, footer, empty	It appears **nowhere**. Its place is taken by the business-name account button and/or product actions. Pricing cards show	V10

ID	P	What to do	Expected result	Ref
		states).	"Current plan" and Upgrade or Change plan instead of starting a trial.	
NAV-04	P1	Signed in, verified, **no** plan yet.	"Start 14-day free trial" or "Choose a plan" is still the primary action.	15.4
NAV-05	P1	Signed in on a legacy lifetime plan.	No trial button. The account button shows the business name.	V10, V11
NAV-06	P1	Signed in: check the green account button and its menu, as an owner and as a member, on Starter and on Scale.	The button shows the **business name**. The menu shows the business name, your name and email, a role badge (Owner or Member) and a plan badge (for example "Growth · Trial ends 25 Nov"). Then the shop switcher (Scale only), **Info**, **Control room**, Shops (owner), Team (owner on Pro and Scale; read-only for members), Plan & billing (owner), Data & privacy (owner; members see their own export only), Help centre and Sign out. It works with the keyboard and screen readers, and closes on Escape or a tap outside.	23.1, IA-4
NAV-07	P2	Business name edge cases: 1 character; 80+ characters; emoji; Arabic or Hebrew (right to left); `<script>alert(1)</script>`; `&`.	Long names are shortened with an ellipsis and the full name in an accessible label or tooltip. Right-to-left text displays correctly. HTML is shown as text and never runs. The button stays at least 44 px and doesn't push the header off screen at 320 px.	V11, SEC-30
NAV-	P1	Business name not saved yet (for example a	The button shows your first	IA-3,

ID	P	What to do	Expected result	Ref
08		Google sign-up that hasn't finished first-run).	name, or failing that the email, **only** until the business name is saved. First-run asks for it.	23.5
NAV-09	P0	Control room in one click: from Home, Pricing, the Help centre, a legal page, Info and Plan & billing, signed in. Use the logo, and use the account menu.	The logo goes to `/app` when you're signed in (Home when signed out). The Control room is one click away from every signed-in page. Record the clicks.	IA-5, CR-1
NAV-10	P0	Refresh (F5 and pull-to-refresh) on every public route in the 23.1 route map: `/`, `/sample-shop`, `/pricing`, `/help`, `/sign-in`, `/reset-password`, `/legal/terms`, `/legal/privacy`, `/legal/refunds-and-cancellation`, `/legal/dpa`, `/legal/cookies`.	Each loads directly with its own content, and stays the same after a refresh.	IA-1, K63, G1
NAV-11	P0	Refresh on every signed-in route: `/app`, `/app/upload`, `/app/products`, `/app/leaks`, `/app/calculators`, `/app/scenarios`, `/app/costs`, `/app/shops`, `/app/team`, `/account/info`, `/account/billing`, `/account/data`, `/app/sample`, `/welcome`, `/invite/:token`. Also refresh the cancel confirmation and the import review.	You stay on the same page **and the same shop** (the shop is in the URL), still signed in. No flash of the signed-out or Home page.	IA-1, SH-6
NAV-12	P0	Copy the URL of each signed-in page, open it in a new tab (still signed in), then in a private window (signed out).	In the new tab, the same page opens. Signed out, you are sent to Sign in, and after sign-in you return to the **same deep link**.	V5
NAV-13	P1	Back and forward through 10 mixed navigations (public and signed-in).	Each step shows the right page. No loop through the sign-in page, no blank screen and no duplicate history entries.	V5, 15.1
NAV-14	P1	Deep link to a page the user's role or plan can't access (a member opens `/billing`, a Starter user opens a Scale-only shop URL, Account A opens Account B's shop ID).	A clear "not available on your plan or role" state, or a redirect. **No data leak.** See SEC.	V5, V15, V16
NAV-15	P1	Unknown URL `/does-not-exist`.	A real 404 page (HTTP 404) with the header, footer and a link home. Not the Home page with	G1

ID	P	What to do	Expected result	Ref
			status 200.	
NAV-16	P2	URLs with a trailing slash, mixed case and query strings (`?utm_source=x`).	They resolve to the same page, with a canonical URL set. Query parameters survive refresh where the v20 design says they should (for example the plan chosen on Pricing).	V5
NAV-17	P1	Stripe return URLs (`success_url` and `cancel_url`), refreshed after returning.	You land on the right signed-in page with a confirmation. Refreshing shows no duplicate "trial started" message and starts no second checkout.	V5, CHK
NAV-18	P1	Links in emails (verify, reset, reminder → Plan & billing, invite, contact copy).	Each opens the correct deep page on margins365.com, refreshes correctly, and sends you through sign-in when needed.	V5, V21
NAV-19	P2	Hash or anchor links (the Pricing plans anchor, FAQ entries in the Help centre).	They scroll to the anchor, the URL updates, and refresh returns to that anchor.	V5, V7
NAV-20	P2	Two tabs open: sign out in one.	The other tab detects it at its next action and goes to Sign in without showing stale data.	10.2.2
NAV-21	P1	Scroll to the bottom of Home and click each "Start here" button.	The new page opens **at the top**. Focus moves to the main heading (or to a skip target).	V4, G2
NAV-22	P1	From the bottom of every page, click each footer link.	The new page opens at the top.	V4
NAV-23	P1	From mid-page, click each header nav item and each button that changes page.	The new page opens at the top.	V4
NAV-24	P1	Inside the signed-in app, from the bottom of a long Control room tab, switch tab, open Plan & billing,	Each opens at the top (unless the v20 design says a tab	V4, V12

ID	P	What to do	Expected result	Ref
		switch shop and open a product.	switch keeps its position).	
NAV-25	P2	Back after scrolling: scroll Pricing halfway, open Help centre, press Back.	The browser restores your previous position on Pricing (normal browser behaviour). A new navigation always starts at the top.	V4
NAV-26	P2	Screen reader: after each route change, check what is announced.	The new page title or heading is announced, and focus isn't left on a control that has disappeared.	WCAG 2.4.3, 4.1.3
NAV-27	P2	Phone and iPad: repeat NAV-21–NAV-23.	The page heading isn't hidden under the sticky header (there is no banner, K81).	15.3, K81
NAV-30	P1	**How intuitive it is (task-based).** Recruit 5 people who haven't seen the product (or the QA team members least familiar with it). Give each one the tasks in the next row without hints. Record time, clicks, wrong turns and their own ease rating from 1 to 5.	Targets per task: ≥ 4 of 5 people succeed. Median clicks and time are at or under the target in NAV-31. Average ease ≥ 4. Any task that misses its target is a **P1 defect** (UX), with a recording as evidence.	V13, 15.2
NAV-31	P1	Tasks (signed in where needed), with target clicks and time: (1) Find the Control room from Home: 1 click, 10 s. (2) Switch to your second shop (Scale): 2 clicks, 15 s. (3) Add a third shop: 4 clicks, 60 s. (4) Invite a bookkeeper to a seat: 4 clicks, 60 s. (5) Remove that member: 3 clicks, 30 s. (6) Change your business phone number: 3 clicks, 45 s. (7) Find out when you'll next be charged and how much: 2 clicks, 20 s. (8) Cancel your subscription: 3 clicks, 45 s, with the reason optional. (9) Download your data: 3 clicks, 30 s. (10) Contact support: 2 clicks, 90 s including typing. (11) Find the Terms before signing up: 1 click, 10 s. (12) Find the hard order limit of your plan: 2 clicks, 20 s. (13) Upload a Shopify Orders CSV: 3 clicks, 60 s. (14) See the top-ranked leak and its £ impact: 1	Record the actual results. Any task that needs more than 2× the target clicks, or that needs help from the moderator, fails.	V12, V13, V16, V19, V8, 15.2

ID	P	What to do	Expected result	Ref
		click, 10 s.		
NAV-32	P2	Labels and wording audit: in the signed-in app, list every navigation label and section name.	They are consistent (for example "Control room" in one form only, "Plan & billing" in one form only). Sentence case, plain English, and no jargon without help text.	22.11
NAV-33	P0	**iPhone Safari:** scroll to the very bottom of Home. Tap each Start here button, each footer link and each header item (go back to the bottom of Home each time). Record a screen video.	Each new page appears **at the very top, instantly, with no visible scrolling animation**, and is still at the top 2 seconds later. (Live today: smooth scrolling makes the page animate up from the old position, and on iPhone it can stop near the bottom, G16.)	K82, NV-1
NAV-34	P1	Repeat NAV-33 from the bottom of every public page and from long signed-in screens, on Android Chrome, iPad and desktop. Include email links, the redirect after sign-in and Stripe returns.	Same result every time.	K82, NV-2
NAV-35	P1	Throttle the network to a slow 3G profile and repeat NAV-33.	After landing at the top, late-loading sections, images and fonts don't push the view down. The heading isn't hidden under the sticky header.	K82
NAV-36	P2	In-page jumps (Compare plans on Pricing, Control room section links), then Back.	In-page jumps still scroll to their target. Back restores the earlier position.	K82, NV-3, NV-4

Suite AUTH — Sign-up, verification, sign-in, sessions and password reset

ID	P	What to do	Expected result	Ref
AUTH-01	P0	Sign up with email and password, including the consent checkbox (suite LEG).	The account is created and a verification email arrives (EML-01). Uploads and checkout stay locked until you verify.	5, 10.2.1

ID	P	What to do	Expected result	Ref
AUTH-02	P1	Password rules: try 14 characters, 15 characters, a 64-character passphrase, a known breached password (for example `password123456789`), and only spaces.	Below 15 is rejected. 15+ is accepted with no rules about character types. Breached passwords are blocked with a clear message. Errors are accessible.	5
AUTH-03	P0	Verification link: use it once, use it again, use it after 24 hours (test clock) and change one character.	The first use verifies. Later uses show a clear "already used or expired" message with a resend option. A tampered link fails safely.	22.8
AUTH-04	P0	Continue with Google (shown first): a new account, a returning account, and an account where `email_verified=false`.	New and returning accounts sign in. An unverified Google email is not treated as verified. Profile completion (business name and the rest) is asked for before first use (V18).	5, 16.5, K57
AUTH-05	P0	Link Google to an existing email account with the same verified email. Also try a *different* Google email.	The link only works with a matching verified email, under the anti-takeover rules. A different email doesn't silently join the accounts.	16.5
AUTH-06	P1	In-app browser (Instagram or Facebook): tap Continue with Google.	A clear prompt to open the page in Safari or Chrome. Email sign-in still works.	15.1
AUTH-07	P0	Sign in with the wrong password 10+ times, from one IP and then from several.	Rate-limited, with a neutral message that doesn't reveal whether the account exists. No lockout of a real user without a recovery path.	16.5
AUTH-08	P0	Session cookie: inspect it in devtools.	HttpOnly, Secure, SameSite (Lax or Strict), scoped to margins365.com, no token in localStorage. Expiry set as the v20 design says.	10.2.2, G7
AUTH-09	P1	Session expiry: idle past the session lifetime, then click an action.	Sent to Sign in, then returned to the same page. No data shown after expiry, and no half-saved changes.	V5
AUTH-10	P0	Sign out, then press Back.	No signed-in content is shown from cache. Cache-Control on signed-in responses prevents it.	SEC

ID	P	What to do	Expected result	Ref
AUTH-11	P0	Sign out of all devices (Profile & sign-in): sign in on 2 browsers, then use it on one.	The other browser is signed out at its next request.	5, 10.2.2
AUTH-12	P1	Forgot password? appears under the password field.	Present and quiet (not a competing primary).	S65
AUTH-13	P0	Reset request for an unknown email, a Google-only account and a password account.	Exactly the same on-screen message: "If an account exists, we've sent a reset link." The same response time (within normal variation) and the same API response.	S66
AUTH-14	P0	Reset email for a password account.	Subject "Reset your Margins365 password", a Reset password button, "This link expires in 60 minutes and can be used only once.", and the ignore line. Sent through SES eu-north-1. No mention of cancelling. Link on margins365.com.	S67, V1, V21
AUTH-15	P0	Reset link at 59 minutes, at 61 minutes, a second use, an older link after a newer request, and a tampered token.	The 59-minute link works. The others show a clear error and "Send a new link".	S68, S69
AUTH-16	P0	Reset rate limits: 4 requests for one email, and 11 from one IP, inside 60 minutes.	"Please wait before requesting another link". Account existence isn't revealed.	Q34
AUTH-17	P1	Google-only account reset email.	Subject "Your Margins365 sign-in". Tells you to use Continue with Google. No set-password link.	S70
AUTH-18	P0	After a successful reset.	The new password works and the old one fails. Every other session is signed out. The "Your password was changed" email arrives.	S71
AUTH-19	P1	Reset journey on a phone and an iPad.	Meets the K48 type sizes and 44 px targets. No pinch-zoom.	S72
AUTH-20	P1	Sign-up validation: invalid email, an existing email, and a very long email (254 and 255	Clear accessible errors that keep what you typed. Signing up with an existing email doesn't reveal it beyond the approved neutral	16.5

ID	P	What to do	Expected result	Ref
		characters).	message.	
AUTH-21	P0	**End-to-end reset** for a real test password account, on iPhone Safari, Android Chrome and desktop. Open the link on a different device from the one that asked for it.	The email arrives. The link opens the reset page, and the new password works while the old one fails. Other sessions are signed out, and "Your password was changed" arrives.	K85, PR-1
AUTH-22	P0	Block the server (devtools offline, or block `/api/*`). Then try sign in, Continue with Google, Forgot password, Set new password and profile save.	Each shows "We couldn't reach Margins365. Check your connection and try again." Nothing appears signed in, and no reset or verify token is stored in the browser (no `marginos.resetTokens` or `marginos.verifyTokens`). (Live today: demo fallbacks show success, G18.)	K85, PR-2
AUTH-23	P0	With an HTTP client, send a reset request for a test account with `origin` set to `https://evil.example` (and a forged Origin header).	The reset email's link is on `https://margins365.com`. The forged value is ignored.	K85, PR-3
AUTH-24	P1	Open `/reset-password` from a reset email, refresh it, and check the address bar and network requests.	The page loads (200, not 404) and survives a refresh. The token is removed from the address bar, and no analytics or third-party request carries it.	K85, PR-4
AUTH-25	P0	Staging: make SES fail, then request resets for an existing account and an unknown email.	Both show the identical neutral message, with similar timing. An alert is raised, and the email arrives after the retry once SES works again.	K85, PR-5

Suite CHK — Checkout, Stripe, trial, conversion, plan changes and payment failure

Use Stripe test mode and test clocks. Check every result in **three places**: the app UI, the Stripe dashboard and the app's entitlement record (admin).

ID	P	What to do	Expected result	Ref
CHK-01	P0	For each of the **8 combinations** (4 tiers × monthly/annual), start a trial from Pricing.	Stripe Checkout opens in subscription mode with Managed Payments, a card is collected, and **£0.00 is charged today**. The trial is 14 days. The entitlement records the chosen plan and interval, trial	7, 12.5, S17, S18

ID	P	What to do	Expected result	Ref
			start and end, the first charge date and amount, and the founding status.	
CHK-02	P0	Checkout wording for each tier (after V17), before you submit the card.	The pricing card reads "14 days free, then £[price] a month including VAT. You won't be charged until [date]. Cancel any time before then in one click." Checkout states your 14-day free trial **of the plan you chose**, that a card is collected, that you pay nothing today, the exact amount and date of the automatic charge, and that you cancel in one click in Plan & billing. **No** "You'll try Pro" and **no** "not the Pro price". The date and amount use the account's time zone and name it.	12.5A, V17, S23
CHK-03	P0	Verification gate: an unverified account tries to check out.	Blocked, with a "Verify your email" prompt.	10.2.1
CHK-04	P0	Second trial on the same account (cancel, then try again before the account closes); a new account using the same card.	A second trial on the same account is refused and a paid option is offered. Same card: refused where Stripe supports the check, and no card data is shown.	S21, S22
CHK-05	P0	Double-click "Start trial" and open Checkout in two tabs.	Only one subscription is created. The second tab shows a clear "you already have a trial" message.	12.5, 12.10
CHK-06	P0	3-D Secure card, declined card and insufficient-funds card at Checkout.	The 3-D Secure challenge works. A declined card shows Stripe's error. No trial and no partial entitlement is created.	12.10
CHK-07	P0	Trial confirmation email (EML-05).	It states the chosen plan, the amount, the charge date, and cancel in Plan & billing. No email-cancel route. Full K90 content: CHK-43, EML-27.	12.5, 12.5A, K90
CHK-08	P0	**Reminder:** advance the test clock to 3 days before the trial ends.	Exactly one reminder. Subject like "Reminder: your Growth trial ends on [date] — you'll be charged £[amount] unless you cancel". The body has the	12.5A, S20, S30, V17

ID	P	What to do	Expected result	Ref
			chosen plan, amount, date and a link that opens Plan & billing. No list of Pro features that will lock and no Keep Pro (V17). It doesn't ask you to reply or email to cancel.	
CHK-09	P0	**Day 15 conversion** for each tier and interval.	The charge is exactly the displayed chosen-plan amount (with the founding 50% if eligible, see OFF), charged once. Status becomes active. The entitlement and limits stay the same as during the trial, because the trial was already the chosen tier (V17). A receipt arrives.	10.2.8, S39 (updated)
CHK-10	P0	Cancel during the trial (CAN suite), then advance past day 15.	**No charge, ever.** Access continues until the original trial end, then the account is closed.	S19, S25, D2
CHK-11	P0	Late or replayed webhooks: replay `customer.subscription.updated`, `invoice.paid` and `trial_will_end` out of order after a cancellation.	The latest Stripe state wins. A cancelled trial is never charged or revived. Each event is processed once.	12.10, S15, S25
CHK-12	P0	Webhook signature: send a forged webhook with no signature or a bad one.	Rejected (400), with no change to state.	12.6 security
CHK-13	P0	Upgrade mid-period (Starter→Growth, Growth→Scale), monthly and annual.	Takes effect immediately after Stripe confirms the prorated charge. The new limits apply. Current usage is kept. The proration amount shown before you confirm matches the invoice.	S4, 12.4
CHK-14	P0	Change plan **during a trial**: upgrade from Starter to Pro, and downgrade from Pro to Growth while usage is above the Growth limit.	Takes effect straight away for features and limits. The original trial end date stays. No new trial and nothing charged today. The day-15 amount updates everywhere (Plan & billing, the banner, the reminder). After a downgrade below current usage, new uploads are blocked as in 12.4.	12.5B, TR-3, PB-3

ID	P	What to do	Expected result	Ref
CHK-15	P0	Downgrade (Scale→Starter).	Scheduled for the next renewal. Clearly shows the date and what will change (shops, seats, history, platforms). No silent deletion. Extras lock at renewal (Q27) and their data is kept.	S5, Q27
CHK-16	P1	Switch monthly to annual and annual to monthly.	Takes effect at renewal, unless Stripe confirms an immediate prorated switch. Shown clearly before you confirm.	12.5
CHK-17	P0	Annual Pro paid.	£1,290 (or the founding annual amount under the v20 rule) is charged once. 12 months of access. The order usage counter **resets monthly**.	S2, L10
CHK-18	P0	Failed renewal (test card 0341): advance through the retries.	Up to 14 days of retries with access kept. A persistent banner, an update-card route, and emails warning that final failure ends access and wipes the data, with an export offered.	S7
CHK-19	P0	Card recovered during the retries.	Becomes active again with no duplicate subscription and no data lost.	S8
CHK-20	P0	Final failure.	Access ends, the data is wiped immediately, and the deletion confirmation email is sent.	S9, D4
CHK-21	P0	First-payment refund requested within 14 days, **including when that payment was the trial conversion** (OD7 resolved by K74).	A full refund, once per customer. Access ends immediately, the data is wiped, and a founding place (if held) is released. A second refund request is refused. Day 15 or later after the first payment: no contractual refund, and statutory rights are unaffected.	S10, S11, Refunds v20, 12.5C
CHK-22	P1	Dispute created and lost (Stripe test dispute).	Follows 12.5: a lost dispute ends the subscription and the data is wiped at access end.	12.5
CHK-23	P1	Customer portal from Plan & billing: update card, view invoices,	Works, with a return URL to margins365.com Plan & billing (V21).	12.10, V1

ID	P	What to do	Expected result	Ref
		download an invoice PDF.	Invoices show Margins365.	
CHK-24	P0	Cancellation outside the product (Link's or Stripe's own subscription tools).	The webhook treats it like an in-app cancellation: closure and deletion are scheduled for the period end, and the same confirmation email is sent. No half state.	CA-4, 23.10
CHK-25	P0	VAT-inclusive prices: inspect the Stripe price objects and invoices.	Tax behaviour is inclusive. The invoice total equals the published price exactly. VAT is shown as the accountant has approved.	3, 12.9
CHK-26	P0	Tamper: change the price ID, plan or quantity in the checkout request (devtools or a proxy).	The server ignores client-supplied prices and plan state, or rejects them. You can't get Scale at the Starter price, a longer trial or an unearned discount.	12.5 entitlement, SEC
CHK-27	P0	Daily reconciliation job: make Stripe and the app disagree in staging (change Stripe directly).	Reconciliation detects it and alerts. No secrets in the alert.	12.10
CHK-28	P1	Legacy lifetime account.	Permanent access, no subscription charge, no trial button and no Cancel subscription button. A refunded or lost-dispute legacy licence has no access.	S16, D11
CHK-29	P1	Stripe return URLs and success/cancel pages.	They are on margins365.com, with no marginos.online. Cancel returns you to Pricing with your choice kept.	V21, 20.5
CHK-30	P0	A subscription that has ended: inspect the entitlement.	The state is ended or closed. **Not "free"**: there is no Free plan.	G9, 7
CHK-40	P0	**Live mode, run by Akthar or with his written go-ahead only:** a real trial, cancelled straight away.	No charge. The dated closure email arrives.	12.10 live proof
CHK-41	P0	**Live mode:** a real trial converted on day 15 (a low-cost tier).	The exact amount is charged once, and the reminder was received 3 days before.	12.10

ID	P	What to do	Expected result	Ref
			The statement descriptor is recorded.	
CHK-42	P0	**Live mode:** a first-payment refund, followed by deletion.	Refunded. Data wiped. Login removed.	12.10
CHK-43	P0	**Trial-start email (K90):** start a trial (Stripe test mode) for each plan, monthly and annual, with and without a founding place.	One email per trial, after the webhook, with plan, start and end dates (time zone named), first charge date and amount including VAT to the penny, founding amount for the first 6 monthly payments (annual: first year) then the full price, the order limit, the Plan & billing cancel route ("replying does not cancel"), the 3-day reminder, a reference and terms links. Amounts match 23.21.4 and the Stripe price.	K90, TS-1, TS-3
CHK-44	P0	**No email on failure:** abandon Checkout, press Back to `?checkout=cancel`, use a card that fails setup, and make the webhook fail (staging).	No trial-start email and no success pop-up. The account shows no trial. When the webhook later succeeds on retry, exactly one email is sent.	K90, TS-2
CHK-45	P0	**Trial-start pop-up:** complete Checkout on desktop and iPhone; then delay the webhook by 40 seconds (staging).	After confirmation: pop-up "Your 14-day free trial of [Plan] has started" with end date, first charge, limit, cancel route and "We've emailed a confirmation to [email]". With the delay: the "still confirming — no charge has been taken" message, never "started". Plan & billing shows the trial on every device.	K90, TS-4
CHK-46	P1	Replay `checkout.session.completed` and `customer.subscription.updated` 3 times.	No second email. One audit entry for the start and one for the send.	K90, TS-5

Suite OFF — Founding offer: 50% off for 6 months, first 100 paying accounts (V20, K72, 12.5C, FO-1–FO-7)

ID	P	What to do	Expected result	Ref
OFF-	P0	With places left, view Pricing and	The line "Founding offer: 50% off your first 6	12.5C,

ID	P	What to do	Expected result	Ref
01		Checkout for every tier and interval.	months — for the first 100 paying customers. [n] places left." is shown. Checkout shows the exact founding amount, the number of founding payments, and the normal price afterwards: monthly £19.50 / £39.50 / £64.50 / £99.50 then £39 / £79 / £129 / £199; annual £292.50 / £592.50 / £967.50 / £1,492.50 then £390 / £790 / £1,290 / £1,990. All including VAT.	FO
OFF-02	P0	Monthly founding account: convert on day 15, then advance the test clock month by month.	Payments **1–6** are exactly 50%. Payment **7** is the full price. In Stripe, a 50% coupon lasts 6 invoices and was applied on the server.	12.5C, S87
OFF-03	P0	Annual founding account.	The first annual payment is 75% of the full price (25% off), charged once. The renewal is the full annual price.	12.5C, S87
OFF-04	P0	Place lifecycle: start a trial (reserved), cancel it (released); start another (reserved), convert (confirmed); refund the first payment (released); let the first payment finally fail (released). Watch the server count at every step.	"[n] places left" = 100 − reserved − confirmed, and it updates at each step. Released places go back into the pool.	12.5C
OFF-05	P0	**Boundary:** seed reserved + confirmed = 99. Start trial A (takes the 100th place), then trial B.	A gets the founding price. B's Pricing and Checkout show **no** offer and the **full price**, and B is charged the full price. The offer line disappears everywhere when the count reaches 0.	12.5C
OFF-06	P0	**Race:** with 1 place left, open two Checkouts at the same moment (a script or two testers).	Exactly one place is reserved. Reserved + confirmed never goes above 100. The other customer sees the full price **before** submitting a card.	12.5C, FO
OFF-07	P0	Honest display: compare "[n] places left" with the server count.	They are equal. No timers, no invented scarcity, no reset.	12.5C, DMCC Act

ID	P	What to do	Expected result	Ref
				2024
OFF-08	P0	After a released place is taken again, and after a founding account closes and the same person signs up again.	The place can go to someone else, but **never back to the same person** after their account closes.	12.5C
OFF-09	P0	Plan change during the founding period: upgrade from Starter to Pro after founding payment 2.	50% applies to the new plan for payments 3–6. Shown before confirming. Matches the Stripe invoice.	12.5C
OFF-10	P0	Switch from monthly to annual: (a) before any founding payment; (b) after founding payment 1.	(a) The annual first year at 25% off. (b) The remaining discount ends at the switch, and this is shown before confirming.	12.5C
OFF-11	P0	Tamper: send a coupon, promotion code or price ID in the checkout request; replay another account's session.	Rejected. Only the server applies the founding coupon, and only to an account holding a place.	12.5C, SEC
OFF-12	P0	Where the founding facts are disclosed: Checkout, the trial-started email, Plan & billing, the trial reminder, invoices and the in-app trial banner ("£[founding amount] a month for 6 months, then £[normal amount]").	Each shows the founding amount, how many founding payments remain and the normal price after them.	12.5C, 12.5B
OFF-13	P0	"Founding price ends soon" email.	Sent **14 days before** the first full-price payment, with the date, the new amount and a link to Plan & billing. Sent once.	12.5C, 23.12
OFF-14	P1	Terms and Refunds pages.	Describe the offer exactly as 12.5C does.	K74
OFF-15	P1	Admin view of places and the retention of founding records after an account closes.	Accurate. After closure only a count with no personal data is kept.	23.13
OFF-16	P1	Old price settings (`foundingMonthlyGbp` = the full price,	They are replaced by the 12.5C amounts or removed, so no display shows a wrong	G11

ID	P	What to do	Expected result	Ref
		G11).	founding price.	
OFF-17	P0	**Pence shown:** plans pop-up tiles, the trial terms, Pricing cards, Checkout, Plan & billing and the trial email, monthly and annual, while founding places remain.	£19.50, £39.50, £64.50 and £99.50 a month; £292.50, £592.50, £967.50 and £1,492.50 a year. Never rounded (live today: £20, £40, £65 and £100). The trial terms state the exact amount charged (for example "we will automatically charge £39.50 including VAT" for Growth), and it equals the Stripe amount.	K72, 12.5C, D-1

Suite TRL — Trial = the tier you choose (V17, reverses K52)

ID	P	What to do	Expected result	Ref
TRL-01	P0	Start a **Starter** trial.	Starter features only: 1 platform slot, 3 months of history, 1 seat, 1 shop, the simple UK VAT toggle, no overheads, no per-channel ROAS, no own FX rate, no saved scenarios, no PDF. The order limit is **500**.	V17, 3, 8
TRL-02	P0	**Growth** trial.	Growth features: up to 2 platforms, 12 months of history, 2 saved scenarios, PDF, overheads, per-channel ROAS, own FX, full tax. Limit **2,000**. 1 seat.	V17
TRL-03	P0	**Pro** trial.	Pro features, a limit of **5,000**, 2 seats.	V17
TRL-04	P0	**Scale** trial.	Scale features, a limit of **15,000**, 3 shops, 5 seats.	V17
TRL-05	P0	The entitlement record during a trial.	The trial entitlement equals the chosen plan (or the field has been removed, per the v20 design). The UI never gives more than the chosen tier.	V17, 12.5
TRL-06	P0	Search the app and emails for retired reverse-trial items: "Keep Pro", "You're trying Pro", the Pro label on a non-Pro trial, "features that will lock", and "Every trial	None found.	V17

ID	P	What to do	Expected result	Ref
		includes Pro features".		
TRL-07	P1	In-app trial banner, for each tier, with and without a founding place.	"You're on your [Plan] free trial until [date]. Your first payment of £[amount] is on [date]. Cancel any time in Plan & billing." Founding accounts add "£[founding amount] a month for 6 months, then £[full amount]." There is a plan badge in the account menu and Plan & billing. No Keep Pro.	12.5B, 23.9
TRL-08	P0	Conversion: features before and after day 15.	Nothing locks and nothing changes at conversion, because the tier is the same. No data is wiped.	V17, D13 (updated)
TRL-09	P0	Starter trial: try to upload the 501st unique order.	Blocked, with the standard overage message. (This replaces L17: overrun after conversion no longer arises from a Pro trial.)	V17, 12.4
TRL-10	P1	Sample data during a trial.	Labelled sample data. It never counts toward the allowance.	7, 17.1

Suite LIM — Hard monthly order limits and platform slots

Run each L-test on the tier named. Then repeat L1–L4 on Growth (1,999/2,000/2,001), Pro (4,999/5,000/5,001) and Scale (14,999/15,000/15,001).

ID	P	What to do	Expected result	Ref
LIM-01	P0	L1: Starter, 0 used, upload 500 distinct orders.	Allowed. Usage 500.	L1
LIM-02	P0	L2: Starter, 499 used, upload 1 new order.	Allowed. Usage 500. The 80% warning was sent at 400.	L2
LIM-03	P0	L3: Starter, 500 used, upload 1 new order.	Blocked. new_unique 1, projected 501, overage 1. **No rows committed.**	L3
LIM-04	P0	L4: Starter, 450 used, upload 100 new orders.	Blocked in full: projected 550, overage 50. Usage stays 450 and the previous results are exactly the same. The message reads "This file would add 100 new orders, taking you to 550 of 500 orders this billing month, 50 over your limit. Upgrade to Growth to import it. Your	L4, 12.4

ID	P	What to do	Expected result	Ref
			existing results are unchanged." Upgrade and Cancel are offered.	
LIM-05	P0	L5: 100 rows that are 50 orders × 2 lines (450 used).	Allowed. Usage 500.	L5
LIM-06	P0	L6: Growth, 1,500 used, upload 600 of which 100 already exist.	500 new. Projected 2,000. Allowed.	L6
LIM-07	P0	L7: repeat the same import.	No extra usage. A duplicate/reconciliation result.	L7
LIM-08	P0	L8: two concurrent uploads that together exceed what's left (two tabs, two seats, or two Scale shops).	Only what fits is committed, by transaction or lock. Usage never goes above L. **This must be enforced on the server** (G7).	L8
LIM-09	P0	L9/L10: the monthly boundary, and the annual plan's monthly boundary (test clock).	The old period keeps its set. The new period starts at 0.	L9, L10
LIM-10	P0	L11: Starter at 399, import to reach 400.	An in-app notice plus **one** email naming Growth and 2,000 orders. A repeat import sends no second email.	L11, EML-09
LIM-11	P0	L12: a fully duplicate upload at the limit.	Allowed to reconcile. Usage unchanged. No false overage.	L12
LIM-12	P0	L13: an all-invalid file that looks over the limit.	Nothing imported. The raw file is deleted. No usage added.	L13
LIM-13	P0	L14: Starter blocked at 550, upgrades to Growth.	After proration the limit is 2,000 immediately. Re-uploading succeeds.	L14
LIM-14	P0	L15/L16: a blocked import on Pro or Scale; an expired or cancelled subscription.	Results, exports and datasets stay visible, with no partial rows. Cancelled: uploads are blocked and export is available until access end.	L15, L16
LIM-15	P0	**Account-wide limit:** Scale with shop 1 at	Blocked: projected 15,500 counted across the **whole account**. The message names the shop, the overage	SH-4, UP-2,

ID	P	What to do	Expected result	Ref
		10,000, shop 2 at 4,000, and shop 3 uploading 1,500 new orders.	and Upgrade (owner) or "Ask the account owner to upgrade" (member).	UP-3
LIM-16	P0	Scale: the same order ID on two different shops.	Counted as 2 orders (distinct shops or platforms are distinct). The same order uploaded twice to one shop is counted once.	12.7, V15
LIM-17	P1	The usage counter.	"[used] of [limit] orders this billing month" in the Control room status strip, neutral colour, counted across the whole account.	23.6, 22.9
LIM-18	P1	Start fresh, Clear sample data, a time-zone change and a re-upload: then check usage.	**Not reset.**	17.4.3
LIM-19	P0	Platform slots: Starter tries to add a 2nd platform, and Growth a 3rd.	Refused, with an upgrade prompt naming the plan that allows it. TikTok isn't selectable and is shown as "Excel import coming soon". Pro and Scale: all 3.	3, Q32, K53
LIM-20	P0	Scale platform allowance **per shop**: shop 1 Shopify, shop 2 Amazon and Etsy, shop 3 all 3.	All allowed, because each shop has its own allowance.	12.7, V15
LIM-21	P1	History windows: upload data covering 30 months on each tier.	Starter shows 3 months, Growth 12, Pro 24, Scale all. Older rows are hidden (not deleted), with an upgrade prompt. Upgrading restores them immediately.	12.4
LIM-22	P1	Fair use: Scale with 500,000 stored orders.	The fair-use rule from 12.4 applies, with a clear message. The monthly limit still applies.	12.4

Suite IMP — Upload and import (Shopify, Amazon, Etsy)

ID	P	What to do	Expected result	Ref
IMP-01	P0	Upload a valid Shopify Orders CSV, then the same file with the optional Payments transactions CSV.	The first imports with fees labelled **estimated**. With the Payments CSV, payment fees are **actual**. The import review appears before results.	6, 16.1

ID	P	What to do	Expected result	Ref
IMP-02	P0	Amazon Custom Unified Transaction CSV (UK, US and German headers).	The header row is found below the description lines. Translated headers are mapped. Transfer rows are skipped. FBA rows are treated as fulfilment fees. Posting dates are used.	16.1
IMP-03	P0	Etsy: Orders CSV only; Order Items only; both; both plus the Monthly Statement.	Either single file fails, naming the missing required file. Both succeed. With the Statement, the actual card-processing fees are used. "--" is read as empty, not zero.	6, 16.1
IMP-04	P0	A required column missing; columns reordered; extra columns; a UTF-8 BOM; header case and spacing changed (for example "Lineitem sku").	A missing required column fails, naming the column. Reordered, extra, BOM and case variants import correctly.	16.1
IMP-05	P0	Wrong format: `.xlsx` renamed `.csv`, a PDF, an `.exe` renamed `.csv`, an empty file, headers only, corrupt encoding.	A clear plain-English rejection. Nothing imported. Raw file deleted. No usage added. Previous results unchanged.	6, 18
IMP-06	P1	Mixed valid and invalid rows.	Valid rows import. Invalid rows are listed with their row number and reason. All-invalid imports nothing.	6
IMP-07	P1	Locale formats: EU decimal commas, currency symbols, thousands separators, and the date formats in 16.1.	Parsed correctly. Spot-check 10 rows against the source file.	16.1
IMP-08	P0	Size limits: 100 MB and 100.01 MB; 50,000 rows and 50,001 rows.	At the limit it is accepted. Over the limit it is rejected **before parsing**, with a message naming the limit. No browser crash on an iPad or a mid-range Android phone.	Q10
IMP-09	P0	**Removing personal data:** import the file seeded with markers (`QA-PII-*`). Then search the cleaned rows, the import preview, errors, exports (Download my data), the PDF, server logs, error reports, browser storage, the	**Zero** markers found anywhere. Country and the permitted US, Canadian and Australian region are kept.	6, 10.2.3

ID	P	What to do	Expected result	Ref
		network responses and support tooling.		
IMP-10	P0	Raw files deleted: after a success, a failure, a cancellation, and an import left unfinished for 61 minutes (then run the 15-minute job).	The original file is gone from all storage. It is never in exports, logs or backups.	6, 10.2.4, 19.4.2
IMP-11	P0	Duplicates and merging: re-upload the same file; overlapping files; a refund-only row for an existing order.	Identical rows are skipped and changed rows updated. A refund links to its original order. No double counting. Usage counts canonical orders.	12.7
IMP-12	P0	The first real upload clears sample data. Also try a failed, a blocked and a template-only upload first.	A successful real order upload removes every sample row, label and cost in the same step. Failed, blocked and template-only uploads leave the sample data as it was.	17.1, Q11
IMP-13	P0	CSV injection: product names starting with `=`, `+`, `-` or `@`, and HTML or script in names.	Shown as text in the app. In Download my data, the cells are escaped so a spreadsheet won't run them.	SEC
IMP-14	P1	Cost template CSV and manual cost entry: valid, invalid decimals, a negative cost, a missing SKU, the wrong currency.	Validated row by row. Overheads only on Growth and above.	6
IMP-15	P1	Ad spend entries with date ranges that partly overlap the period.	Pro-rated by overlapping days, shown in Show the maths.	12.0
IMP-16	P1	Currency: orders in EUR or USD with an ECB rate; a currency with no ECB rate on Starter compared with Growth.	Converted with the ECB rate. Starter excludes the orders with no rate and shows the count and total. Growth and above can enter a "user rate".	6
IMP-17	P1	Scale: upload to shop 2 while shop 1 is selected in another tab.	The upload goes to the shop shown on the upload screen. The shop is named on the confirmation. There is no way to upload to the wrong shop by accident.	V15
IMP-	P1	TikTok on the upload screen.	No TikTok option or file type works.	K53,

ID	P	What to do	Expected result	Ref
18			"TikTok Shop UK (Beta): Excel import coming soon" is shown.	S47
IMP-19	P2	Upload on a phone (from Files, iCloud or Google Drive) and on an iPad.	Works, with progress shown. Cancelling works. Leaving the page mid-upload asks you to confirm.	15.3

Suite CALC — Calculations, Health Score and the sample shop figures

Business & Product signs off the expected value of each fixture before you run it. Use decimal arithmetic with half-up rounding (12.3). Check every result in the UI, in Show the maths, the PDF and the CSV export.

ID	P	Fixture	Expected result	Ref
CALC-01	P0	Net margin 10%, no ads, returns 3%, product mix 0%, actual fees within 1 percentage point of the preset, net shipping 5%.	Ads dropped (not applicable, so confidence isn't lowered). Weights rescaled to 80. Score = (35×50 + 15×100 + 10×100×3) ÷ 80 = **78.125 → 78**, band **Needs attention**. The breakdown says Ad efficiency was dropped and why.	12.1
CALC-02	P0	Every part at its midpoint: net margin 10%, ROAS exactly 1.0× break-even, returns 9%, mix 25%, fees 5.5 points above, shipping 10%.	Each part 50. Score **50**, band **Needs attention** (the lower edge).	12.1
CALC-03	P0	Ad efficiency part at ROAS of 0.75×, 0.875×, 1.0×, 1.25× and 1.5× break-even.	0, 25, 50, 75 and 100 points.	12.1
CALC-04	P0	A fixture whose unrounded score is 79.5, and one at 49.5.	They round to 80 (**Strong**) and 50 (**Needs attention**). Rounding happens before banding.	12.1
CALC-05	P0	Contribution margin ≤ 0% with ad spend.	Ad efficiency is 0, with "Every ad pound loses money" (in the home currency's name, for example "dollar").	12.1
CALC-06	P0	Fees presets only, or a mix of actual and preset.	The Fees part is dropped and confidence lowered. Fee drag never fires.	12.1, 12.3

ID	P	Fixture	Expected result	Ref
CALC-07	P0	Confidence: a 10-day period, 25 orders, cost missing on 12% of revenue, and a High returns leak using estimated units.	Each lowers confidence by one level (Low at the lowest), and each reason is listed. A warning that the period is under 14 days.	12.1
CALC-08	P0	Store revenue of 0.	No score. You're asked to check the file.	12.1
CALC-09	P0	Product verdicts: net margin 9.95%, 9.94%, a net profit of −£0.004, and costs with no revenue.	Healthy (rounds to 10.0%), Thin (9.9%), Losing money, No revenue. A product whose sales were all refunded shows Losing money.	12.2
CALC-10	P0	Unprofitable ads: ad spend £1,000 and CM £800 (ROAS below 1.0× break-even); then CM −£100.	Impact £200, then £1,000 (the most it can be is the ad spend). Between 1.0× and 1.5× break-even, no leak.	12.3
CALC-11	P0	High returns: 20 orders, unit return rate 20%, store average excluding this product 5%, return cost £400.	Triggered (above 2× the average). Target rate 5%. Impact £400 × (1 − 5/20) = **£300**. Single-product store: 14% → no leak, 16% → leak with a 15% target. Fewer than 10 orders → no leak.	12.3
CALC-12	P0	Shipping subsidy: net shipping cost £700 on £10,000 of shipping-eligible revenue; then exactly £500.	Impact **£200**, then no leak. FBA orders are left out of both figures.	12.3
CALC-13	P0	Fee drag: compared actual fees 7.5% against a 6.0% preset on £10,000 of compared revenue; then 7.0%.	Impact **£150**, then no leak (exactly 1 point doesn't trigger).	12.3
CALC-14	P0	Thin pricing: target margin 10%, product net margin 6%, revenue £5,000; then set the target to 5%.	Impact **£200**, then no leak.	12.3
CALC-15	P0	Monthly scaling: a 60-day period with a leak of £400 over the period.	Shown as **£200 a month**. Leaks are rounded to whole pounds. No impact is ever negative. **No total of all leaks is shown.**	12.3
CALC-16	P0	v17.1 regression set: a £20.00 target price gives exactly 10.0% net margin with shipping charged; a blended	All exact.	10.3

ID	P	Fixture	Expected result	Ref
		£21.10 gives 10.0% and £21.09 doesn't; a £30 order-level refund gives 0.6 and 0.3 estimated units.		
CALC-17	P0	Allocation: £10 shipping charged across lines worth £30 and £10; £10 across three equal lines.	£7.50 / £2.50, and £3.33 / £3.33 / £3.34 (the remainder on the last line), flagged "allocated".	12.0
CALC-18	P0	Break-even: CM 25%; CM 0%.	Break-even ROAS 4.00× and ACOS 25.0%. At 0%, ROAS is "not reachable".	12.0
CALC-19	P0	Target price edge cases: a denominator ≤ 0; a result ≤ 0; already at target; a VAT-inclusive seller; multiple platforms.	"Can't reach the target margin at any price" (naming the cause); 0.01 with the note; "Current price already reaches your target margin (target price £X)"; ×(1+tax), rounded up; the platform mix named in Show the maths.	12.3
CALC-20	P0	**The sample figures match everywhere:** the Home hero card, the Product-section proof line, the Sample shop page, the signed-in sample shop dashboard, the sample PDF, meta descriptions and any marketing figure.	The **same** Health Score, true profit, net margin and top leak everywhere (Home says £840 a month, true profit £2,691, Health 69; the earlier mismatch was Health 69 against 36 and margin 14.2% against 12.4%). Every place is labelled "Sample data".	17.6, G11
CALC-21	P0	Recalculate the sample shop by hand (or in a spreadsheet) from the sample dataset.	The displayed values equal the formula results. If the dataset has changed, the Home proof number has been updated to match.	17.6
CALC-22	P1	Show the maths on every figure.	It opens with a tap or keyboard, shows the inputs, the formula, "allocated" and "estimated" labels, and the stated assumptions (ad spend per unit held, units sold unchanged in scenarios).	12.0–12.3
CALC-23	P1	Scenarios (Growth and above): change price only; change ad spend; change the return rate.	Units sold stay the same, and ad spend per unit is held when only the price changes. A product priced at its target shows exactly the target margin.	12.3

ID	P	Fixture	Expected result	Ref
CALC-24	P1	Scale "All shops" view.	Money figures (true profit, revenue, leak £) are shown per shop and in total, and the totals equal the sum of the shops. The **Health Score is not combined or averaged**: it stays per shop.	23.2

Suite CR — Control room (the signed-in workspace) and plan gating

ID	P	What to do	Expected result	Ref
CR-01	P0	First results after an upload.	Leads with the highest-£ ranked fix and the top three leaks, then the Health Score, products and detail. The same order on a phone.	10.1.5, 15.2.4
CR-02	P0	Every tier: check what each tier gets against the 3.1 matrix. Yes on all: true profit, Health Score with full breakdown, verdicts, all six leaks with £ impact, ranked fixes, Show the maths, SKU charts, price and target calculator, break-even ROAS and ACOS, Download my data. Growth and above: per-channel ROAS, overheads, own FX, full tax, PDF, scenarios (Growth 2 saved, Pro and Scale unlimited). Starter: simple UK VAT toggle.	Exact match. No blurred data and no locked placeholders. A gated feature shows one contextual upgrade prompt that names the plan.	3.1, 8, 10.1.6–7
CR-03	P0	Gating is enforced on the server: call a Growth-only feature's API (PDF, scenarios save, overheads) from a Starter account.	Refused (403), however the UI is changed.	12.5, SEC
CR-04	P1	PDF report (Growth, Pro, Scale).	Beside the results, not in the header. A4, always light, Margins365 lock-up, "x of y" footer, verdicts readable in black and white. No PDF icon anywhere on Starter.	8, 22.8, K27
CR-05	P1	Growth: save a 3rd scenario.	Refused, with an upgrade prompt. Comparisons are unlimited.	3.1
CR-06	P1	Suggest a feature: submit, then submit 1,001 characters.	Saved with timestamp, account, plan, submitter and text, **and emailed to**	Q33, S58,

ID	P	What to do	Expected result	Ref
			info.marginos@gmail.com (HELP-17). Thank-you message with no promise of a reply. A limit of 1,000 characters. Admin can see it.	K83
CR-07	P1	Clear sample data.	Only offered while sample data exists. The confirmation names what is removed. Cancel is the default. Your own data is untouched.	17.2
CR-08	P0	Start fresh: Cancel, Escape and Back; then confirm.	Cancel changes nothing. Confirm removes datasets, costs, ads, overheads, scenarios and samples, and **keeps** the account, subscription, billing, shops, team and settings. Usage isn't reset. The confirmation shows the real counts and "This can't be undone".	17.3, 17.4, S14
CR-09	P1	Light only.	No dark-mode toggle or dark theme. The header has no PDF icon.	K26, 22.12
CR-10	P1	Brand colour rules: buttons against Healthy and Strong chips.	They follow K21: a solid teal button with a verb label, and a tinted green chip with a word and ✓, not interactive. Colour is never the only signal.	22.2–22.4
CR-11	P2	Empty states: a new account with no upload; a shop with no data; a product with no costs.	A helpful next step (for example Upload your first file), never a blank panel. "Cost missing" warnings.	15.2

Suite SHOP — Shops and multi-shop (V15, V12, 23.2, SH-1–SH-7)

ID	P	What to do	Expected result	Ref
SHOP-01	P0	First-run: add the first shop (name and platforms within the plan's slots).	Required before you can upload. Created and selected. Its name is shown in the Control room header.	23.5, 23.2
SHOP-02	P0	Starter, Growth and Pro owner: click Add shop; then	Add shop opens the upgrade explainer "Add up to 3 shops on Scale (£199/mo)." It never creates a	SH-1

ID	P	What to do	Expected result	Ref
		try to create a shop through the API.	second shop. The API refuses (403 or 409).	
SHOP-03	P0	Scale owner: add shops 2 and 3 (from the account menu and from Shops). Then try a 4th.	2 and 3 are created, each opening empty with its own upload prompt. At 3 shops the button is replaced by "Scale includes up to 3 shops". The API refuses a 4th.	SH-2
SHOP-04	P0	Shop names: 0 characters, 1, 60, 61; the same name as another shop; HTML.	1–60 characters, unique within the account. A duplicate shows an inline error. HTML is shown as text. Renaming takes effect everywhere at once.	23.2
SHOP-05	P0	Scale switcher in the account menu: switch from Leaks in shop 1 to shop 2.	The current shop is ticked. You stay on the same kind of page (Leaks → Leaks), at the top. The shop is in the URL. Refresh keeps it. Every figure, the upload target, the PDF and the export change to shop 2.	SH-6, V12
SHOP-06	P0	Switch quickly 10 times while an upload runs in another tab.	Data from two shops never mixes. The upload lands in the shop it was started in.	SH-3, UP-1
SHOP-07	P0	Separation: check orders, costs, results, exports, the PDF and search in each shop. Also put shop 1's ID in a shop 2 URL.	Data never appears in another shop. Another account's shop ID returns 403 or 404.	SH-3
SHOP-08	P1	"All shops" view (Scale).	Read-only. True profit, revenue and leak £ shown per shop side by side and in total. The **Health Score stays per shop** and isn't averaged. The totals add up correctly.	23.2
SHOP-09	P0	Remove a shop (Scale, owner, more than one shop).	The confirmation names the shop, the item counts that will be deleted and "This can't be undone", and the owner must type the shop name. After confirming, the shop's data is deleted (backups within 7 days). Order usage already counted this month is **not** refunded.	SH-5
SHOP-10	P0	Try to remove the last shop. Upload while a shop is being removed. Remove the same	Not allowed (use Start fresh instead). The upload is refused with a clear message. The second tab sees "This shop has already been removed".	23.2

ID	P	What to do	Expected result	Ref
		shop from two tabs.		
SHOP-11	P0	Scale downgrades to Pro at renewal with 3 shops: (a) the owner picks the shop that stays active; (b) the owner doesn't choose.	The other shops become **locked** (kept, not visible, no uploads). If no choice is made, the oldest shop stays active. Upgrading unlocks them with their data. Locked shops are deleted only at access end.	SH-7
SHOP-12	P0	Members and shops.	Members can view, switch and upload in every shop. They can't add, rename or remove shops (UI and API).	23.3
SHOP-13	P1	Starter, Growth and Pro: the shop name with Rename in the Control room header (owner).	There is no switcher. Rename works.	23.1
SHOP-14	P1	Phone and iPad: the switcher and Shops screens.	Usable at 320 px, targets at least 44 px, long names shortened. Works with VoiceOver and TalkBack.	15.3

Suite SEAT — Seats, roles and invites (V16, 23.3, ST-1–ST-7)

ID	P	What to do	Expected result	Ref
SEAT-01	P0	Seats on each tier, counting pending invites.	Starter 1, Growth 1, Pro 2, Scale 5. Seats used = active members (including the owner) + pending invites. Plan & billing shows the seats used.	ST-1
SEAT-02	P0	Starter and Growth: open Team and try to invite (UI and API).	Invite is disabled with "Your plan includes 1 seats. Pro includes 2, Scale includes 5." (check the grammar: it should read "1 seat") and an upgrade link. The API refuses.	23.3
SEAT-03	P0	Pro owner: invite one member.	The invite email "[Business name] invited you to Margins365" arrives through SES from margins365.com, with Accept linking to `/invite/:token`.	ST-2, ST-3

ID	P	What to do	Expected result	Ref
			The invitee signs in or signs up with **the same, verified email**. Membership becomes active and they land in the Control room of the current shop.	
SEAT-04	P0	Pro: a second invite while one is pending. Scale: a 5th member plus 1 pending invite.	Refused, because the seats are full including the pending invite.	ST-1
SEAT-05	P0	Invite link: use it twice; after 7 days (test clock); after it's been revoked; with a different email signed in; tampered.	One use only. Expired or revoked: "This invite is no longer valid. Ask the account owner for a new one." Wrong email: "This invite is for a different email. Sign out and use [masked email]." Tampered: a safe error.	ST-2, 23.3
SEAT-06	P0	Invite someone who already belongs to another account; invite an existing member again.	"This person already uses Margins365 with another business." Duplicates are refused.	23.3
SEAT-07	P1	Revoke a pending invite; send a new one.	The seat is freed. The old link no longer works.	23.3
SEAT-08	P0	**Member permissions (23.3 table).** As a member, **allowed**: view everything in every shop; upload and review imports; edit costs, ads and overheads; create scenarios and datasets; download the PDF (on tiers that include it); Download my data; edit your own name, phone, password and Google link. **Refused** (check UI **and** API): add, rename or remove shops; invite, revoke or remove; edit the business name, country, VAT number or address; Plan & billing; Cancel; Start fresh; Clear sample data.	Allowed actions work. Every refused action is hidden or read-only in the UI **and** returns 403 from the API. `/account/billing` shows "Only the account owner can manage billing." Members never see "Cancel subscription". The Team page is read-only for members.	ST-4, ST-7, PB-1
SEAT-09	P0	Owner removes a member who is currently signed in.	Their session ends at their next request. They get the email "You no longer have access to [Business name] on Margins365". Their uploads and edits stay with	ST-5

ID	P	What to do	Expected result	Ref
			the account. The seat is freed.	
SEAT-10	P0	Downgrade below the current seats at renewal: (a) the owner chooses who stays; (b) no choice.	The others become `locked`: they can't sign in to this account and are told why. With no choice, the most recently added are locked first. Upgrading restores them. Nothing is deleted.	ST-6
SEAT-11	P0	The owner cancels the subscription.	Members get the dated warning email. At access end every membership ends, along with the account.	23.3, K51
SEAT-12	P1	Identity: a member's header and account menu.	The account button shows the **business name**. The menu shows their own name and email and a **Member** badge. The team list shows each person's name.	23.1, V14
SEAT-13	P1	Ownership transfer.	Not offered. The Help centre explains that the owner keeps control of billing. No partly working option is hidden in the UI or API.	23.3
SEAT-14	P1	Invited member onboarding.	Skips the plan and shop steps and asks only for their own name.	ON-4
SEAT-15	P1	Audit events for invite, accept, revoke, remove and lock.	Each is logged with type, time, account ID, the user who did it and the plan. No message bodies.	23.0

Suite PROF — Info (account profile) and identity (V18, V14, V13, 23.4, IN-1–IN-6)

ID	P	What to do	Expected result	Ref
PROF-01	P0	Sign-up form.	Asks only for email and password (or Continue with Google), plus acceptance of the Terms with a Privacy link. No	IN-1

ID	P	What to do	Expected result	Ref
			phone or business fields at sign-up.	
PROF-02	P0	First-run `/welcome`: try to continue with each required field empty.	You can't finish without your name, business name and country.	IN-2
PROF-03	P0	Info fields at `/account/info`.	Required: your name, business name, country, email, home currency and time zone (the last two default from the country and browser). Optional: phone, business address, VAT number, website. Optional fields can be left empty.	23.4, IN-3
PROF-04	P1	Validation: names and business names of 0, 1, 100 and 101 characters; phones as +44, +1 and +61 numbers plus invalid ones; a VAT number of 21 characters; choosing the country by typing; an invalid email.	Limits are enforced with accessible errors and what you typed is kept. A visible "Saved" confirmation, and the change survives refresh.	23.4
PROF-05	P0	Change the email.	It needs verification **before** it takes effect. Until then the old email keeps working.	IN-5
PROF-06	P0	Change the business name.	The account button updates straight away, and so do menus, the team list, invites and the PDF.	IN-4, V11
PROF-07	P0	As a member: edit the business fields (UI and API). Edit your own name and phone.	Business fields are view-only, and the API returns 403. Your own fields save.	IN-6
PROF-08	P1	Sign-in management within Info: password change, link or unlink Google, sign out of all devices.	All work. There is no Delete account control anywhere.	5, K29
PROF-09	P1	Settings sections.	Info (which replaces "Profile & sign-in"), Plan & billing and Data & privacy, all reachable from the account menu.	23.1
PROF-10	P0	Download my data contains the profile. After closure the profile is deleted.	Yes to both.	12.6, 23.13

ID	P	What to do	Expected result	Ref
PROF-11	P1	Identity everywhere: header, menus, email greetings.	The business name, falling back to first name and then email only until a business name is saved.	IA-3
PROF-12	P1	The phone number is used only for contacting the owner about the account.	It isn't used for marketing, and the Privacy Policy says so.	23.4

Suite ONB — Onboarding and first run (23.5, ON-1–ON-4)

ID	P	What to do	Expected result	Ref
ONB-01	P0	A brand-new user: sign up → verify → About your business → Choose a plan → Checkout → Add your first shop → Upload → Add costs → First results, on a phone, an iPad and a desktop, with no help.	Completed. Each step has its own route. The progress indicator shows steps 4–7 and can be dismissed.	ON-1
ONB-02	P0	Refresh at every step, and sign out and back in mid-way.	It resumes at the first step you haven't finished.	ON-2
ONB-03	P0	Abandon Checkout and cancel Checkout.	No charge. You return to Choose a plan with "No card was charged." The header shows the signed-in, no-plan state.	ON-3
ONB-04	P1	An invited member.	Skips the plan and shop steps.	ON-4
ONB-05	P1	The sample shop is reachable from the Control room header and from the Sample shop page at every stage.	Yes. Labelled Sample data and never counted.	23.5

Suite BILL — Plan & billing

ID	P	What to do	Expected result	Ref
BILL-01	P0	During a trial (each tier).	Shows: "Your trial ends on [date]. You won't be charged if you cancel before then.", the chosen plan, the first charge amount (founding price if eligible) and date, with the time zone named, and a clearly labelled **Cancel trial**. No Keep Pro.	12.5A, V17
BILL-02	P0	Paid.	Plan, interval, usage, the next payment date and amount (showing when the founding price ends and the price from month	5, V20

ID	P	What to do	Expected result	Ref
			7), invoices, change plan, update card, and a clearly labelled **Cancel subscription** you don't have to hunt for.	
BILL-03	P0	As a member.	Billing actions aren't available (SEAT-08).	12.5A
BILL-04	P1	Past due.	A persistent banner with an update-card button and the deletion warning.	S7
BILL-05	P1	Cancelled, with access still running.	"Cancellation scheduled — access ends [date/time]", the deletion date and Download my data. Undo is offered if Stripe still shows the subscription as active.	12.5A

Suite CAN — Cancellation, including the optional reason (V19, 12.5A, K50, K51)

ID	P	What to do	Expected result	Ref
CAN-01	P0	Owner, trial: Plan & billing → Cancel trial.	**One** confirmation step: "You will not be charged. You keep access until [exact date and time]. Your account will be closed and your data will be permanently deleted on [the same date and time]. Download your data before then. This cannot be undone." Download my data is prominent. Two actions: **Confirm cancel** and **Go back** (Go back is the default).	12.5A, S28, S29
CAN-02	P0	Owner, paid: Cancel subscription.	The paid wording ("Your subscription will not renew…") with the paid-period end date.	12.5A
CAN-03	P0	**The reason is optional:** confirm **without** choosing or typing a reason.	Cancels straight away. No error, no extra step and no delay.	V19
CAN-04	P0	The reason is on the same step. Check that choosing a reason doesn't add a screen, an offer or a delay, and that Confirm cancel is never hidden, disabled or moved off screen because of it.	One screen: the 12.5A wording, an optional "Why are you cancelling?" picker (Too expensive; Not using it enough; Missing a feature I need; Hard to use; My data or files didn't work; Switching to another tool; Business closed or paused; Other), an optional free-text box (up to 500 characters), then Confirm cancel and Go back.	23.10, CA-1
CAN-	P0	Choose a reason and type	The reason and text are stored when given (CA-2),	CA-2,

ID	P	What to do	Expected result	Ref
05		501+ characters including HTML, then confirm. Also make storing the reason fail (in staging).	with the text escaped and limited to 500 characters without blocking. If the reason fails to save, the cancellation **still** completes.	V19
CAN-06	P0	The reason after access end.	It stays linked to the account until access end, then is kept with **no** account or personal link (for reporting only). Check the database: no email, name or account ID left.	23.13
CAN-07	P0	**On the server:** after Confirm cancel, check Stripe.	The subscription is set to cancel at the period or trial end (`cancel_at_period_end`), or cancelled, per 12.5. The entitlement records the closure date and the deletion due. **Not just a message on screen** (G8).	12.10, G8
CAN-08	P0	After confirming.	An in-app confirmation, plus an email (EML-11) repeating the access-end date, that the account will be closed, the deletion date, no charge or no renewal, and the export link.	12.5A
CAN-09	P0	Access after cancelling.	Full access and export until the stated end. Uploads are allowed while access remains (per 12.4). No early wipe.	D1, D2
CAN-10	P1	Undo with "Keep my plan" before access end.	Resumes the same trial or period only if Stripe still shows it as active. No new trial. Members are told.	23.10, 12.5A
CAN-11	P0	Look everywhere for any other way to cancel: Help centre, FAQ, the contact form, emails, Refunds and Terms.	Cancellation is only in Plan & billing. No email, phone or ticket route. The contact form's confirmation and the copy emailed to the user don't offer cancellation.	K50, S35
CAN-12	P0	No retention maze: count the steps and look for offers.	One confirmation step and no retention offer (none was approved at launch). Cancel is as easy as keeping the plan.	12.5A
CAN-13	P1	Cancel on a phone and an iPad, with VoiceOver.	Can be completed. Dates are read out. Go back is reachable.	15.2.6
CAN-14	P0	**Stripe really changes (K89):** owner on a trial	`cancel_at_period_end` is true and the Dashboard shows “Cancels [trial-end date]” (or the status is	K89, CX-1,

ID	P	What to do	Expected result	Ref
		(Stripe test mode) presses Cancel trial → Confirm cancel. Open the subscription in the Stripe Dashboard.	Canceled). **No upcoming invoice.** The network log shows one server call; nothing is decided in the browser alone.	G22
CAN-15	P0	Same for a paid monthly and a paid annual subscription.	`cancel_at_period_end` is true, with the cancel date equal to the paid-period end. No renewal invoice is scheduled.	K89
CAN-16	P0	Confirmation pop-up after CAN-14 and CAN-15, on desktop and iPhone.	An in-page pop-up (K80) with “Your trial is cancelled” or “Your subscription is cancelled”, access-until date and time with the time zone, “You won't be charged” or “No further payments will be taken”, the deletion date, a reference and “We've emailed a confirmation to [email]”. Download my data and Close.	K89, CX-2
CAN-17	P0	**Failure never claims success:** in staging, make Stripe refuse the update, make the server time out, and make the no-invoice check fail.	The failure pop-up shows (“We couldn't cancel… Nothing has changed — you will still be charged on [date] unless you cancel”). Plan & billing still shows the trial or plan with Cancel. Stripe is unchanged. No email. An audit entry “failed”.	K89, CX-5
CAN-18	P0	Double-tap Confirm cancel, and send the same request twice.	Stripe is updated once. One audit “confirmed” entry, one email, one reference.	K89
CAN-19	P0	**Plan & billing on every device:** after cancelling, sign out and in, open a private window, a second device and an iPhone.	Each shows “Cancelled — access until [date]”, the reference, “You won't be charged” and the Stripe line. Cancel is replaced by Resubscribe. It never reverts to the trial after a refresh.	K89, CX-4
CAN-20	P1	Resubscribe before access ends, trial and paid.	One confirmation with the charge date and amount. Stripe `cancel_at_period_end` becomes false with the same end date. No new trial. Pop-up and email confirm it. Audit “resubscribed”.	K89, CX-6, 12.5A
CAN-21	P0	Audit log after CAN-14 to CAN-20.	One entry per attempt with time, account, user, role, plan, Stripe subscription ID, action, `cancel_at`, the no-invoice check result, reference and IP. Admins only.	K89, CX-7

ID	P	What to do	Expected result	Ref
CAN-22	P0	Cancel in the Stripe Dashboard (and through Link, where possible) instead of the app.	The webhook gives the same Plan & billing status and one email. No “free” plan is set when it ends (G9).	K89, CX-8
CAN-23	P0	**No charge at trial end:** use a Stripe test clock to move a cancelled trial past its end.	No invoice and no payment. The subscription ends. The account closes and the data wipe runs at the stated time (K39, K51). No trial reminder was sent after the cancellation.	K89, CX-9
CAN-24	P1	A member (not owner) calls the cancel route directly.	Refused (403). Stripe unchanged. Audit entry.	K89, 12.5A
CAN-25	P1	Follow spec 23.21.3 (Akthar's check) on a test cancellation.	Every step matches what the Dashboard and app show.	K89

Suite DEL — Account closure and data deletion

ID	P	What to do	Expected result	Ref
DEL-01	P0	Advance the clock past the access end of a cancelled trial and of a cancelled paid plan. Run the jobs.	Every category in 12.6 is gone from the live app, exports, search indexes, caches and derived stores: orders, costs, ads, overheads, settings, datasets, results, PDFs, scenarios, samples, **shops, team and member links, profile, contact and suggestion links to the account** (per Privacy). The login no longer works.	D3, D10, 12.6
DEL-02	P0	Sign up again with the same email after closure.	A new, empty account. Nothing restored. No second trial (one per account or card, per the v20 rule). Founding eligibility per the v20 rule.	D6, S12
DEL-03	P0	Backups: check the backup retention setting and a restore.	Retention ≤ 7 days. A restore test re-applies the deletion records before access, so deleted data never comes back.	D7, D8, 19
DEL-04	P0	Missed job: stop the scheduler for a day, then restart it.	It catches up once, alerts support, doesn't extend access and doesn't send duplicate notices. Access rules cut off at the stated time even if the job is late.	D9, 19.3
DEL-05	P0	**Is data stored on the server or in the browser?** Inspect	Product data is stored on the **server** and appears on the second device. Nothing about the product is left	G7,

ID	P	What to do	Expected result	Ref
		localStorage, IndexedDB and Cache Storage after an upload. Then sign in on a second device.	in browser storage after sign-out or deletion (G7).	10.2
DEL-06	P1	A legacy lifetime account.	Its data is not wiped. Start fresh still works.	D11
DEL-07	P1	What remains after access end.	Only Stripe's records, the legally required invoice, payment and tax records, and a deletion record that identifies no one. They match what the Privacy Policy says.	12.6

Suite HELP — Help centre and contact form (V7, V8)

ID	P	What to do	Expected result	Ref
HELP-01	P0	Open the Help centre signed out, signed in, and as a closed or locked-out user.	It is a public page with its own URL. Reachable from the footer (and from the account menu, per the v20 design).	V7, F8
HELP-02	P1	The **Hard limits & billing FAQ** is here **and on Pricing** (K87; see HELP-25).	Every 3.2 question is present and **updated for v20**: the trial is the tier you choose (no "Starter, Growth and Pro trials include full Pro features", no "Keep Pro", no "during a trial the active limit is Pro's 5,000"); the founding offer is described; the copy says "Margins365"; and any "look at the sample report" wording now says Sample shop. Pricing still shows the same FAQ (K87).	V7, V17, V20, S56, S64
HELP-03	P1	FAQ items open with a tap, the keyboard (Enter or Space) and a screen reader (`aria-expanded`). Deep-link to one answer.	They work, and a refresh keeps the opened answer if the v20 design supports anchors.	15.3, V5
HELP-04	P0	Contact form fields and the notice.	Name (required), Phone number (optional), Business name (optional), Email (required), Country (required, from a list), Message (required, 10–5,000 characters). Signed in, the name, business name, email and country are pre-filled and can be edited. No attachments. The notice	23.11

ID	P	What to do	Expected result	Ref
			reads: "We use these details to answer your message. Don't include passwords or card details. See our Privacy Policy." (with a link).	
HELP-05	P0	Validation: leave each required field empty; a 9-character and a 5,001-character message; an invalid email or phone; only spaces; emoji; right-to-left text; HTML or script. Also send a crafted request that skips the page.	An accessible error next to each field, with what you typed kept. The server applies the same rules. HTML is stored and shown as text.	HC-2
HELP-06	P0	Submit a valid message.	**After** the message has been stored, a pop-up appears: titled "Message sent" with the body exactly "Thank you for contacting us, we aim to respond within 24 hours." (K88). It is shown in the page, **not the browser's alert box**. It has a Close button and keeps focus inside it. Closing returns focus to the form, which is then cleared.	23.11, HC-5, K88
HELP-07	P0	Check the **info.marginos@gmail.com** inbox (or a staging stand-in set up the same way).	One email per submission, sent through SES from margins365.com, with the subject "Margins365 contact: [Name] — [Business name]", every field, the time and reply-to set to the visitor. It passes SPF, DKIM and DMARC and isn't in spam.	HC-3
HELP-08	P0	Check the visitor's inbox.	One confirmation: "We've received your message", **without their message text** (K84, HELP-21), containing “Thank you for contacting us, we aim to respond within 24 hours.” (K88). If the message mentions cancelling, one line: "To cancel, the account owner uses Plan & billing." Margins365 branding, a plain-text version, passes SPF, DKIM and DMARC.	HC-4, 23.11

ID	P	What to do	Expected result	Ref
HELP-09	P0	Abuse: 6 submissions from one IP in an hour; 4 to one email in an hour; filling the honeypot; submitting faster than the minimum fill time; scripting 100 submissions.	Limited to 5 per IP and 3 per email per hour, with a clear wait message. Bot submissions are silently refused. There is no third-party captcha. Someone else's inbox can't be flooded beyond 3 copies an hour (see section 10, gap 4).	23.11, HC-2
HELP-10	P0	Failures: (a) network or storage fails; (b) storage succeeds but SES sending fails.	(a) No pop-up, an error, and what you typed is kept. (b) The success pop-up **is** shown (the message is stored), an admin alert is raised, and the email is retried until sent. Check that both emails eventually arrive.	23.11
HELP-11	P0	Double-click submit, and retry after a timeout.	Only one record and one pair of emails.	HC-6
HELP-12	P0	Admin inbox.	Viewable only by the authenticated admin (the owner of the business that runs Margins365). Ordinary and signed-out requests are refused. Messages are deleted 12 months after receipt (test with the clock).	23.11, 23.13
HELP-13	P1	Logs.	The message body, phone number and email address don't appear in application or error logs.	Nov 7, 19.3
HELP-14	P1	Phone and iPad: fill in and send.	The right keyboards appear (email, tel). Targets ≥ 44 px. The pop-up fits the screen. The country picker can be used.	K48
HELP-15	P1	The Privacy Policy covers contact submissions: what is collected, why, the legal basis, how long it's kept, that Google (Gmail) is a recipient, and international transfers if any.	Covered, and accurate.	V22, UK GDPR Art 13
HELP-16	P2	Other Help centre content (how to start, sign-in, files needed, shops and seats, downloads, cancelling and data, refunds, legal PDFs,	Accurate for the v20 product, with no "[TO COMPLETE]" left, and every link working.	V7

ID	P	What to do	Expected result	Ref
		suggest a feature).		
HELP-17	P0	**Suggest a feature**, signed in: send a suggestion. Check info.marginos@gmail.com and the admin list.	One email, from margins365.com through SES. Subject "Margins365 feature suggestion: [Business name] ([Plan])". It contains the text, name, account email, business name, plan and status, role, number of shops, account ID, time (Europe/London) and screen, with **Reply-To set to the submitter**. The suggestion is also stored. A success message shows in the page. No copy goes to the user. (Live today: stored only, no email, G17.)	K83, FS-1, FS-2
HELP-18	P1	Suggest a feature: 6 in an hour; a double tap; 1,001 characters; signed out (the form, plus a direct request to the server); staging SES failure; storage failure.	Limited at 5 per hour and 20 per day. A double tap sends once. 1,001 characters are refused. Signed out, the form isn't offered and the server refuses the request (401). SES failure: success is shown, an alert is raised and the email is delivered after the retry. Storage failure: an error is shown and the text is kept.	K83, FS-3–FS-5
HELP-19	P2	FAQ answer about recommending a feature (Pricing FAQ copy and Help centre).	It matches spec 3.2 entry 3 (K87): "Signed in, open Suggest a feature, write a short note and send it. It goes straight to the Margins365 team. We can't promise a reply." followed by the sign-in line and the Contact us link.	K83, K87
HELP-20	P0	**Contact us**, signed out and then signed in: send one message each. Check info.marginos@gmail.com and the browser's network request.	Exactly one notification per send, from margins365.com, with Reply-To set to the visitor. Signed in, it also shows the account email, business name, plan and status, role and account ID (all from the session), plus a flag when the form email differs. Signed out, it's marked "Signed-out visitor". The browser request contains no recipient address.	K84, HC-7, HC-8
HELP-21	P0	Check the visitor's confirmation email.	Subject "We've received your message — Margins365". It contains **no message text, phone number or other fields**, and Reply-To is info.marginos@gmail.com. The cancel line appears only when the message mentions	K84, HC-9

ID	P	What to do	Expected result	Ref
			cancelling.	
HELP-22	P0	Spam checks: fill the hidden honeypot; submit within 3 seconds of opening the page; send a forged X-Forwarded-For to dodge the IP limit; restart the server between submissions.	Honeypot and too-fast submissions are refused silently (no email). The IP limit uses the real client IP, so forged headers don't bypass it. Limits survive a restart and apply across servers.	K84, HC-11
HELP-23	P1	Message of 9, 10, 5,000 and 5,001 characters, in the page and directly to the server.	10 to 5,000 are accepted and 9 and 5,001 are refused, with the same rules in both places (live today: 4,000).	K84
HELP-24	P1	Failure paths: storage fails; storage works but the notification fails; the visitor confirmation fails.	Storage failure: no pop-up, an error, and the text kept. Notification failure: the success pop-up, an admin alert, and both emails arrive after the retry. A failed visitor confirmation doesn't block success.	K84, HC-12
HELP-25	P1	**Same FAQ, one source (K87):** compare the Hard limits & billing FAQ on Pricing and in the Help centre, word for word, with spec 3.2. In staging, change one answer in the content source.	Both pages show the same 15 questions and answers (the 14 from the live Pricing list plus “Is there a founding offer?”). Pricing uses the 3.2 order. Editing one answer updates both pages, their prerendered HTML and their JSON-LD.	K87, FQ-1
HELP-26	P1	Help centre FAQ structure, signed out and signed in.	Five group headings (Getting started; Trial, plans and billing; Order limits, shops and seats; Data and privacy; Feedback and contact) in the 23.20 order, plus the separate Sign-in and account section. **No question appears twice.** The old Help-only items (“What happens during the free trial?”, “What are the unique-order limits?”, “How many shops and seats do I get?” and the second “Can I cancel anytime?”) are gone.	K87, FQ-2
HELP-27	P1	Accordion, on both pages: tap, mouse, Enter and Space; VoiceOver or NVDA; open several; open `/help#faq-annual` and `/pricing#faq-vat` directly;	Answers start closed and open and close with every method. `aria-expanded` is announced. Several can be open at once. An anchor link opens and scrolls to its answer, and it stays open after a refresh. Targets are at least 44 px. Answer text is	K87, FQ-3, K75

ID	P	What to do	Expected result	Ref
		refresh.	in the HTML before JavaScript runs.	
HELP-28	P1	Links: in Q3, tap **Suggest a feature** signed in and signed out; tap **Contact us**; from the bottom of the Help FAQ, tap a link to Pricing or a legal page.	Signed in, it opens the Suggest a feature box. Signed out, it goes to Sign in and then returns to that box. Contact us shows the Help centre form. Links to other pages open at the very top (K82).	K87, FQ-4, K83, K82
HELP-29	P0	**Answer content audit**, on both pages.	The trial is the plan you choose (no Pro trial or Keep Pro). Founding: 50% off the first 6 monthly payments for the first 100 paying customers, with pence (£19.50 / £39.50 / £64.50 / £99.50), and 25% off year 1 on annual plans (£292.50 / £592.50 / £967.50 / £1,492.50). Cancelling: Plan & billing only, owner only, never by email. No “sample report”. No “Cancel before day 14” banner phrase (K81). SES located in the EU (Stockholm). A suggestion “goes straight to the Margins365 team” (K83). The shops and seats answers don't repeat sentences.	K87, FQ-6, K69, K72, K50, K81, K83
HELP-30	P1	The buttons under the Pricing FAQ: signed out; signed in without a plan; on a trial; on a paid plan.	Signed out: **Start 14-day free trial**, **Open Sample Shop**, **Sign in**. No plan: **Choose a plan**, **Open Sample Shop**. Trial or paid: **Go to Control room**, **Open Sample Shop**. **“View sample report” appears nowhere.** No trial button for trial or paid users, and no Sign in or Account button when signed in. Each button opens its page at the top.	K87, FQ-5, K60, K66, K67
HELP-31	P2	FAQPage JSON-LD on Pricing and the Help centre.	It matches the visible questions and answers word for word, comes from the same source, and validates. No question is marked up twice on one page.	K87, K75, SEO 191
HELP-32	P2	Both FAQs on a phone (320 and 390 px) and an iPad.	No sideways scrolling. Long answers are readable without zooming. Links are tappable (44 px). Opening an answer doesn't jump the page unexpectedly.	K87, K80, MOB-10
HELP-33	P0	**Contact wording (K88):** send a valid message signed	The pop-up title is “Message sent” and the body is exactly “Thank you for contacting us, we aim to	K88,

ID	P	What to do	Expected result	Ref
		out, then signed in, on desktop and on an iPhone.	respond within 24 hours.” The line under Send shows the same sentence. The pop-up appears only after the message is stored.	23.21.1
HELP-34	P0	Read the contact form intro.	Exactly “We read every message and aim to respond within 24 hours. Do not use this form to cancel.”	K88
HELP-35	P0	Visitor confirmation email after HELP-33.	Body contains “Thank you for contacting us, we aim to respond within 24 hours.” and the date and time with the time zone named. Still no message text (K84). The cancel line appears only when the message mentions cancelling.	K88, K84
HELP-36	P0	Search the built app, prerendered pages, emails and legal pages for “promise a reply time”, “can't promise a reply time” and “don't promise a reply time”.	No matches. Only “We can't promise a reply” about feature ideas (Suggest a feature, FAQ entry 3) remains.	K88
HELP-37	P1	Pricing cards, comparison table and Terms.	No support target row, no “priority support” and no reply-time promise in the Terms. The 24-hour aim appears only in the contact flow and its email.	K88, K41

Suite LEG — Legal documents and compliance on the site (V22)

Judge everything against UK and EU rules: UK GDPR and the EU GDPR; PECR and the ePrivacy rules on cookies; the Consumer Contracts Regulations 2013; the Electronic Commerce Regulations 2002; the Companies Act trading-disclosure rules; the DMCC Act 2024; and the EU Consumer Rights Directive. Legal confirms how each applies. QA checks that what is published is **present, reachable, consistent and true to the product**.

ID	P	What to do	Expected result	Ref
LEG-01	P0	Find each document on the site: **Terms**, **Privacy Policy**, **Refunds & cancellation**, **DPA & subprocessors** and the **Cookie notice**.	Each is published and reachable from the footer on every page, signed out.	V22
LEG-02	P0	Before you sign up: on the sign-up	Links to the Terms and the Privacy Policy are shown	V22

ID	P	What to do	Expected result	Ref
		form and the Google button.	**before** the account is created. A consent checkbox (if the v20 design uses one) is **not pre-ticked**, links to the current versions, and is required. The version accepted and the time are recorded on the server.	
LEG-03	P0	At checkout, before the card is entered.	Links to the Terms and Refunds & cancellation (and the founding-offer terms) are visible. Pre-contract information is complete: who the trader is, the total price including VAT, the trial length, when and how much the automatic charge is, the founding price and how long it lasts, how to cancel, and the refund policy.	V22, 12.5, CCR 2013
LEG-04	P0	Signed out, open each document (HTML and PDF).	Readable with **no sign-in or payment** needed. A customer-specific signed DPA may need sign-in. The generic DPA template and the subprocessor list must be public. No "Sign in to view documents" in front of required information.	V22, F4, F10
LEG-05	P1	Open each legal document from the footer, sign-up, Checkout and the Help centre.	Each opens in a **new tab** (`target="_blank" rel="noopener noreferrer"`). The PDF and HTML are A4-readable, use "Margins365" in the file name, and work on iPhone and iPad (no blank tab, no download loop). The right	K74, LG

ID	P	What to do	Expected result	Ref
			content type is set.	
LEG-06	P0	Every document shows a **version number and effective date**, and the HTML and PDF versions match.	Yes. There is a "last updated" date. Earlier versions are kept (or there is a change log) if the v20 design says so.	V22
LEG-07	P0	**No placeholders left:** search each document for "[TO COMPLETE]", "DRAFT", "TBC", "XXX" or "lorem".	**None.** Any found is P0.	V22
LEG-08	Pre-launch	**Business identity details:** the documents use the trading name **Margins365**, with a working contact (the Help centre form and info.marginos@gmail.com). Registered address, company number, company type, country of registration and ICO registration number are not published yet.	Registered address, company number and ICO number to be added before launch if required (UK Companies Act trading disclosures). This is a **pre-launch check, not a P0 release blocker**. Record whether the details are present; do not fail the build on their absence.	E-Commerce Regs 2002 reg 6; Company Names & Trading Disclosures Regs 2015
LEG-09	P0	**The documents match the product.** Check each fact against how the product actually behaves: trial = the tier you choose, 14 days, card upfront; charged on day 15; reminder 3 days before; cancel only by the owner, in-platform, in one step with an optional reason; access until the end of the period; account closed and **all data wiped** at the end of access, with backups gone within 7 days; first-payment refund within 14 days, once; founding offer 50% for 6 months for the first 100 paying users; hard order limits; shops and seats per tier; no email cancellation.	Every fact matches the live behaviour **and** the other documents. Any mismatch is P0.	V22, 12.5–12.6
LEG-	P0	**The processor list matches reality:**	All listed with their role,	V22, UK GDPR

ID	P	What to do	Expected result	Ref
10		DigitalOcean (London LON1: app, database, backups); Amazon SES / AWS (Stockholm, eu-north-1: email); Stripe / Link (payments); Google (sign-in, and **Gmail** as the contact-form inbox); Cloudflare (the `__cf_bm` cookie shows it is in use as a proxy or CDN); and any logging or monitoring tool.	location and transfer safeguards, including Cloudflare (the `__cf_bm` cookie) and Gmail. Anything in use but not listed is P0.	Art 28 and 13(1)(e)–(f)
LEG-11	P0	Privacy Policy contents: who the controller is and how to contact them; a privacy contact that works without signing in; the purposes and legal bases; the recipients; international transfers; how long data is kept (account, billing, contact form, cancellation reasons, logs); people's rights; the right to complain to the ICO (and an EU supervisory authority, if relevant); whether giving data is required; and any automated decision-making (none).	All present and accurate.	UK GDPR Art 13
LEG-12	P1	DPA: Article 28 terms (instructions, confidentiality, security, subprocessors with authorisation and notice of changes, help with data-subject rights, breach notice, deletion or return, audit).	Present. A change-notice method is defined. A public template is available.	Art 28
LEG-13	P0	Refunds & cancellation: owner-only cancellation in Plan & billing; access until the end; the closure and deletion dates; the first-payment refund rule and **how to request it**; statutory rights unaffected; no email cancellation; and what happens to the founding price.	All present, consistent with the Terms and the product.	V22, K50
LEG-14	P0	Terms: the service description, plans and prices including VAT, the trial and automatic renewal, order limits, shops	Present, with no placeholders and consistent	V22

ID	P	What to do	Expected result	Ref
		and seats, the founding-offer terms, how to cancel, refunds, data and deletion, liability, changes to terms and prices (with notice), and the governing law and courts.	with the product.	
LEG-20	P1	Contract confirmation on a durable medium: after checkout, does the user receive the key terms (or a link to the version accepted) by email?	Yes: the trial confirmation includes them or links to the accepted version.	CCR 2013 reg 16
LEG-21	P1	EU consumer withdrawal function (if EU consumers can subscribe).	Legal confirms whether it applies. If it does, there is an easy online withdrawal or cancel function. Plan & billing cancellation may meet this; record the result.	EU Directive 2023/2673 (legal to confirm)
LEG-30	P0	**Cookie and storage inventory:** with an empty browser, visit each public page, then sign in. List every cookie, localStorage, sessionStorage and IndexedDB item (name, provider, purpose, how long it lasts).	Every item is listed in the Cookie notice with its purpose. Currently at least the Cloudflare `__cf_bm` cookie, the session cookie, and localStorage keys (`marginos.*`, banner dismissal, tokens, audit).	V22, PECR reg 6, G12
LEG-31	P0	Non-essential storage (analytics, ads, preferences that aren't strictly needed).	None set **before** consent. With K79 the only optional item is Plausible analytics (no cookies), loaded only after Accept; the banner has equally easy Accept and Reject, no pre-ticked boxes, and consent can be withdrawn later (suites CONS and ANL).	PECR, ePrivacy, K79
LEG-32	P1	Third-party requests: check the network on every page.	Only the services listed (Stripe on checkout, Google on sign-in, Cloudflare). No third-party font servers	22.11

ID	P	What to do	Expected result	Ref
			(fonts are self-hosted). The only analytics host is Plausible's, and only after Accept (ANL-01, ANL-08).	
LEG-33	P1	The Cookie notice is linked from the footer (or the Privacy Policy) and has a version and date.	Yes.	V22
LEG-40	P0	Honest pricing everywhere (DMCC Act 2024): the full price is shown up front; nothing extra added at checkout; the founding offer's countdown or "places left" is true; any "was / now" price is genuine.	Pass, with no misleading urgency.	V20, DMCC Act 2024
LEG-41	P1	Accessibility statement (if the v20 design includes one).	Published and accurate.	WCAG

No marketing in transactional mail. The footer says why you got it and gives the support contact. No invitation to reply or email to cancel. Logo alt text "Margins365". Readable in dark mode. 600 px single column.	22.8, V1, V21
EML-20	P1	Every email: delivery	Lands in the inbox, not spam, at Gmail, Outlook and iCloud. A mail-tester score of 9/10 or higher.	16.5
EML-21	P1	Bounces and complaints	SES bounce and complaint handling is set up. A bounced address is flagged. A failed reminder raises a support alert (12.5).	12.5A
EML-22	P0	**SES evidence:** screenshots of the SES console (eu-north-1).	The margins365.com identity shows **Verified**, DKIM **Successful**, and MAIL FROM `mail.margins365.com` **Successful**. The account dashboard shows **production access** (not sandbox).	K86, ES-1, ES-2
EML-23	P0	Send a reset and a contact confirmation to a **fresh, unverified** Outlook address and a fresh iCloud address.	Both arrive in the inbox, which proves production access. Raw headers show SPF pass, DKIM pass `d=margins365.com` and DMARC pass.	K86, ES-3
EML-24	P1	DNS lookup: apex TXT, `_dmarc`, `mail`. MX and TXT, and the 3 DKIM CNAMEs.	Apex SPF `v=spf1 include:amazonses.com ~all` is published. DMARC has a reporting address, with the move to quarantine dated. The MAIL FROM records are present. The DKIM CNAMEs resolve.	K86, ES-5
EML-	P1	Every email's headers,	Reply-To is set as K86 says (notifications to Akthar → the	K86,

ID	P	Email	Expected result	Ref
25		and the SES mailbox simulator (bounce and complaint addresses).	sender; customer emails → info.marginos@gmail.com). No email asks for a reply to a margins365.com address. Simulated bounces and complaints are flagged and not mailed again.	ES-4
EML-26	P0	**Cancellation email (K89)** after CAN-14 and CAN-15.	One email from Margins365 via SES. Subject “Your Margins365 trial is cancelled — you won't be charged” or “Your Margins365 subscription is cancelled”. It contains the reference, plan, date and time cancelled, access until, the no-further-charges statement, the data deletion date, the Download my data link and how to resubscribe. Plain-text version; SPF, DKIM and DMARC pass; Reply-To info.marginos@gmail.com; it doesn't ask for a reply.	K89, CX-3, EML-11
EML-27	P0	**Trial-start email (K90)** after CHK-43.	Subject “Your Margins365 [Plan] trial has started — first charge on [date]”. From Margins365 via SES; Reply-To info.marginos@gmail.com; plain-text version; SPF, DKIM and DMARC pass; no “Pro trial” wording.	K90, EML-05

Suite DOM — Moving off marginos.online (V21)

ID	P	What to do	Expected result	Ref
DOM-01	P0	Search the built bundle, the HTML, emails, PDFs, legal documents, meta tags, the sitemap and the Stripe and Google settings for `marginos.online` and `marginos.com`.	No customer-facing matches. (The contact inbox info.marginos@gmail.com is approved in K65 and appears in the Terms. That is allowed, but log it for Akthar, see section 10.) Code identifiers such as storage keys may stay (K59).	K73
DOM-02	P0	Google OAuth client.	margins365.com origins and redirect URIs work. marginos.online entries are removed once the switch is proven. The consent screen links point to margins365.com.	V21, 20.5.3
DOM-03	P0	SES.	The margins365.com identity is verified, with DKIM, SPF and MAIL FROM. No sending from a marginos.online identity.	V21, 20.5.4
DOM-04	P0	Stripe: success, cancel and portal return URLs, the webhook endpoint, business website, support URL and the terms and	All on margins365.com.	V21, 20.5.5

ID	P	What to do	Expected result	Ref
		privacy links.		
DOM-05	P1	The old domain while it still exists: `http://` and `https://marginos.online/any/path?x=1`.	A 301 redirect to the same path on `https://margins365.com` (today it redirects to the home page only). HSTS on the new domain.	V21
DOM-06	P0	**Retiring the old domain.** Under K73, the marginos.online redirect stops when the domain is cancelled.	Confirm (with Development) that nothing still depends on it: no old reset or verify links still valid, no customer-facing URLs, no OAuth or SES dependency. Record the cancellation date. Recommend Akthar keeps the domain registered but parked to prevent impersonation (see section 10).	K73
DOM-07	P1	`www.margins365.com`	Redirects (301) to `https://margins365.com`, or is set as canonical.	V21

Suite MOB — Phones and pop-ups (K80, K81; spec 23.19.1–23.19.2)

Run on a real iPhone (Safari, with the address bar both shown and hidden; scroll a little to hide it), an Android phone (Chrome), Samsung Internet and an iPad (portrait and landscape). Also run on the smallest supported phone size, 320 × 568 (iPhone SE class). Record a screen video for every Fail.

ID	P	What to do	Expected result	Ref
MOB-01	P0	Open the **plans / free-trial pop-up** from every entry point (header, Start here, Pricing cards, Sample shop), signed out and signed in with no plan. Try to reach the top and the bottom.	**Close** stays visible. The content scrolls **inside** the pop-up. **Start 14-day free trial** and **Not now** can be reached and tapped without zooming, and never sit behind the Safari toolbar or home indicator. The page behind doesn't move. (Live today: the pop-up is 1,541 px tall on a 664 px screen and can't be scrolled, G14.)	K80, MOB-1, MOB-2
MOB-02	P0	Sign in, Sign up, verify email, profile completion, Forgot password and Set new password pop-ups, with the on-screen keyboard open on each field.	The focused field and the submit button stay visible or reachable while the keyboard is open. Close stays visible. Nothing is cut off.	K80, MOB-4
MOB-03	P0	**Cancel trial / Cancel subscription** confirmation with the 8 optional reasons and the note, at 320 × 568	**Confirm Cancel** and **Go Back** are reachable whether or not a reason is chosen. The	K80, K71

ID	P	What to do	Expected result	Ref
		and 390 × 664.	reason never blocks cancelling.	
MOB-04	P1	**Clear sample data** and **Delete my shop data** confirmations.	Both buttons are reachable, and the text can be read in full.	K80
MOB-05	P1	Contact success pop-up, account menu, shop switcher (Scale), invite and remove member, and the phone navigation menu, in portrait and landscape.	Every control is reachable. Each scrolls inside if it's longer than the screen.	K80
MOB-06	P0	First visit (no consent stored): open any pop-up while the cookie banner is showing.	The pop-up sits **above** the cookie banner, and the banner never covers a pop-up control. The cookie banner's own buttons sit clear of the home indicator.	K80, MOB-3, D-2
MOB-07	P1	Background lock: scroll halfway down a page, open a pop-up, then swipe inside it and on the dimmed area. Close it.	The page behind doesn't scroll, and swipes inside the pop-up don't pass through to it. After closing, the page is exactly where it was.	K80, MOB-2
MOB-08	P1	Keyboard and VoiceOver / TalkBack with each pop-up.	Focus moves into the pop-up and stays there. Escape and Close both close it. Focus returns to the button that opened it, and the pop-up title is announced.	K80, MOB-5, WCAG 2.4.3
MOB-09	P1	With a pop-up open: rotate the device; set iOS text size to the largest; zoom the browser to 200%.	Every control is still reachable. No content is lost.	K80
MOB-10	P0	**Site-wide mobile check:** every public page and every signed-in screen at 320, 375, 390, 414 and 430 px wide, on iPad portrait and landscape, on iPhone Safari (bar shown and hidden), Android Chrome and Samsung Internet.	No sideways page scrolling. Nothing hidden behind fixed bars. Every button is reachable and at least 44 × 44 px. Forms work with the keyboard open. Body text needs no pinch-zoom. Log a pass or fail per page and device.	K80, MOB-6, 15.3
MOB-11	P1	The sticky header in portrait on a 390 × 664 screen, on every public page.	It takes no more than about a sixth of the screen height (live today: header plus banner take 199 px) and never covers a	K80, K81

ID	P	What to do	Expected result	Ref
			page heading.	
MOB-12	P1	**Banner removed:** on every page, signed in and out, on every device, and in a text search of the built site and the prerendered HTML.	No "14 days free. Cancel before day 14 and pay nothing. From £39/mo" banner and no dismiss control. The header is the top element, with no empty strip.	K81, BN-1, BN-2
MOB-13	P0	After the banner removal, check the trial terms.	The terms required before purchase are still shown on the Pricing cards, in the plans pop-up and at Checkout (LEG-03, CHK-02).	K81, BN-3

Suite RESP — Phone, iPad and desktop layout (K45, K48)

ID	P	What to do	Expected result	Ref
RESP-01	P0	**Screenshot matrix:** capture every public page (Home, Sample shop, Pricing, Help centre including the form and pop-up, Sign in, reset, Terms, Privacy, Refunds, DPA, Cookie notice, 404) and the core signed-in screens (Control room, upload, import review, Info, Plan & billing, cancel confirmation, shop switcher, team and seats) at 390×844, 768×1024, 834×1194, 1024×768, 1194×834, 1280×800, 1440×900 and 1920×1080, plus 320×640.	Each screenshot is marked pass or fail against: type sizes, 44 px targets, content width, no empty region on one side, hero scaling, and no zoomed-out page. **Any fail blocks release.**	15.5, S33
RESP-02	P0	Type sizes, measured with devtools: body text ≥ 16 px; section headings ≥ 24 px (phone) and ≥ 28 px (larger); page headlines ≥ 28, 32, 36 and 40 px at the four widths.	They pass at every breakpoint.	15.5
RESP-03	P0	Pricing comparison on a phone and on iPad portrait and landscape.	Stacked rows, or a table that scrolls sideways **inside the table only**, with the Capability column fixed and a visible hint that there's more. iPad landscape is readable without scrolling sideways or pinch-zooming.	15.3 (regression surface)
RESP-04	P0	Home hero on iPad (the 6 Nov regression	It follows K48: the image scales with the text, no	15.5, S59

ID	P	What to do	Expected result	Ref
		surface).	floating card, no empty band wider than 12% on one side.	
RESP-05	P1	The sticky header on short tablet screens.	It never covers headings or tables. No sticky banner (K81).	15.3, K81
RESP-06	P1	Sample card and ranked leaks on a phone and an iPad.	No clipping of £ amounts or leak names, and no pinch-zoom needed.	S57
RESP-07	P1	The business-name button, the shop switcher and the account menu at 320 px.	Usable, with nothing overlapping. The header doesn't wrap onto two lines.	V11, V12
RESP-08	P1	Rotate the device mid-task (upload, cancel, contact form).	No data lost, and the layout adjusts.	15.3
RESP-09	P1	200% and 400% browser zoom (reflow at 320 CSS px).	Content reflows with no sideways scroll for core tasks and no content lost.	WCAG 1.4.10, 15.1
RESP-10	P2	Large desktop (2560 px).	Centred, with the content up to 1,440 px wide and equal margins.	15.5

Suite XB — Browsers

ID	P	What to do	Expected result	Ref
XB-01	P0	The core journeys (sign up → trial → upload → results → invite → switch shop → cancel; contact form; legal PDFs) on Chrome, Safari, Edge and Firefox (latest 2 versions each), Samsung Internet, iOS Safari and Android Chrome.	All pass.	15.1
XB-02	P1	Safari private mode and blocked third-party cookies.	Sign-in, checkout return and Google sign-in still work.	15.1
XB-03	P1	JavaScript disabled.	Public legal pages are still readable (server-rendered HTML or static	V22,

ID	P	What to do	Expected result	Ref
			pages), and other pages say clearly that JavaScript is needed.	15.1
XB-04	P2	A slow 3G connection and offline mode.	Clear loading and offline states. No double submissions.	15.2.10

Suite A11Y — Accessibility (WCAG 2.2 AA)

ID	P	What to do	Expected result	Ref
A11Y-01	P0	Run axe on every page in the RESP-01 list.	Zero serious or critical issues.	15.1
A11Y-02	P0	Keyboard only: every core journey, including the account menu, shop switcher, invite dialog, cancel confirmation, the contact-form pop-up, FAQ panels and tooltips.	Everything can be reached and used. The order is logical. Focus is always visible (a 3 px teal ring). No keyboard traps. Escape closes dialogs. Focus returns to where it was.	2.1.1, 2.4.3, 2.4.7, 2.4.11
A11Y-03	P0	Screen readers (VoiceOver on iOS and macOS, NVDA, TalkBack): the same journeys.	Names, roles and states are announced. Errors are announced. Route changes are announced (NAV-26). The shop-icon button is announced as "Open Sample Shop". The Health Score is announced with its band and confidence.	4.1.2, 4.1.3, 1.1.1
A11Y-04	P0	Colour contrast: text ≥ 4.5:1, large text and interface parts ≥ 3:1. Colour is never the only signal.	Pass. The section 22 tokens hold.	1.4.3, 1.4.11, 1.4.1
A11Y-05	P1	Target size ≥ 24 px (WCAG 2.2), with the product standard of 44 px.	Pass.	2.5.8, 15.1
A11Y-06	P1	Form labels, instructions, autocomplete, error suggestions, and not asking for information already given (prefill).	Pass: contact form, Info, sign-up, reset, cancellation reason.	1.3.5, 3.3.1–3.3.3, 3.3.7
A11Y-	P1	Accessible sign-in: no puzzle	Pass.	3.3.8

ID	P	What to do	Expected result	Ref
07		that relies on memory or thinking. Paste is allowed in password fields. Password managers work.		
A11Y-08	P1	Charts have text alternatives. Tables have headers. Headings are in a logical order. Each page has a unique title. A skip link exists.	Pass.	1.1.1, 1.3.1, 2.4.1, 2.4.2
A11Y-09	P2	Reduced motion and animation.	`prefers-reduced-motion` is respected.	2.3.3
A11Y-10	P1	PDFs (legal documents and the report).	Tagged, with a reading order, a title and language set, where possible.	1.3.1

Suite SEC — Security, isolation and permissions

ID	P	What to do	Expected result	Ref
SEC-01	P0	**Tenant isolation:** signed in as Account A, request every API object of Account B by changing IDs (shops, datasets, results, PDFs, exports, invoices, members, invites, contact records, suggestions, cancellation records).	403 or 404 every time. No data and no metadata leaked.	12.6, V15, V16
SEC-02	P0	**Role checks (IDOR):** as a member, call every owner-only endpoint (cancel, billing, portal session, invite, remove, shop add/remove, Start fresh, profile edit, export if restricted).	403.	V16, 12.5A
SEC-03	P0	**Plan checks:** call Scale-only and Growth-only endpoints from a lower plan; send a modified plan, limit or seat count in requests.	Refused. Every entitlement is checked on the server.	12.5
SEC-04	P0	Protected files: report PDFs, exports, signed DPAs. Try a direct URL signed out, as another account, with a HEAD or range request, after sign-out, and via a cached copy.	Refused every time. No CDN or cache leak. No long-lived tokens in links.	F6, F7
SEC-	P0	Browser storage after sign-out (G7).	No product data, tokens or	G7,

ID	P	What to do	Expected result	Ref
05			personal data left in localStorage, sessionStorage or IndexedDB.	10.2.2
SEC-06	P0	CSRF: send state-changing requests from another origin.	Refused (SameSite cookies plus a CSRF token or origin check).	12.6
SEC-07	P0	Upload security: oversize files, a zip-bomb XLSX, wrong MIME types, path traversal in the file name.	Refused safely, with no server crash.	6, Q10
SEC-08	P0	Rate limits: sign-in, sign-up, reset, verify, contact form, invite, checkout creation, suggestions.	Each is limited, with neutral messages. Rate limits are stored so they survive restarts and work across server instances (not just in memory).	16.5, V8
SEC-09	P0	Secrets: search the bundle, HTML and network responses for API keys (Stripe secret, AWS, Google client secret, database URLs).	Only publishable keys.	16.4
SEC-10	P0	Logs: trigger errors with personal data, tokens and passwords in the input.	Not logged.	10.2.2, 19.3
SEC-20	P0	HTTPS: HTTP → HTTPS redirect; TLS 1.2+ only; a valid certificate on the apex and www domains.	Pass.	—
SEC-21	P1	Security headers on HTML and API responses: Strict-Transport-Security (with includeSubDomains), Content-Security-Policy, X-Content-Type-Options: nosniff, a frame-ancestors / X-Frame-Options policy, Referrer-Policy and Permissions-Policy.	Present and sensible (currently missing, G10).	G10
SEC-22	P1	Clickjacking: load the app in an iframe on another site.	Blocked.	G10
SEC-23	P1	CORS on the API.	Only margins365.com is allowed. Credentials aren't allowed from other origins.	—
SEC-	P1	Caching of signed-in responses.	`Cache-Control: no-store` (or	AUTH-1

ID	P	What to do	Expected result	Ref
24			private) on personal data.	0
SEC-30	P0	Cross-site scripting (XSS): enter `<img src=x onerror=alert(1)>` in every free-text field (business name, shop name, member name, contact message, cancellation reason, suggestion, product names inside CSVs). Then view it in the app, emails, the PDF and the admin views.	Shown as text everywhere and never runs.	SEC
SEC-31	P1	Email header injection through the contact form (line breaks in the name or email).	Cleaned out. No extra recipients.	V8
SEC-32	P1	Admin pages (contact inbox, suggestions, the founding counter).	Need admin sign-in checked on the server (two-factor recommended). Not reachable by ordinary users.	Nov 7 AC4
SEC-33	P1	Google OAuth: `state` and nonce checks; the ID token checked on the server (issuer, audience, expiry, signature).	Pass. The live bundle calls Google's userinfo endpoint from the browser, so confirm the server checks the ID token itself.	16.5

Suite PRIV — Privacy and data rights

ID	P	What to do	Expected result	Ref
PRIV-01	P0	Download my data (CSV).	Contains the cleaned orders, costs and settings (and the profile, per the v20 design). Never the original file or buyer personal data. Available until access end. Opens correctly in Excel and Sheets (UTF-8, cells protected against formulas).	10.2.5, 12.7
PRIV-02	P0	Data locations: check the infrastructure settings.	App, database and backups in DigitalOcean LON1. Email through SES eu-north-1. Matches the Privacy Policy.	K36, 19.4.1
PRIV-03	P1	Subject requests (access, correction, erasure) through the privacy contact while signed out or closed.	The route exists and is published. Not hidden behind sign-in.	LEG-11

ID	P	What to do	Expected result	Ref
PRIV-04	P1	Collect only what's needed: list every field collected (sign-up, Info, contact form, cancellation, invites).	Each one is justified in the Privacy Policy. Nothing undisclosed is collected (for example, no device fingerprinting).	UK GDPR Art 5(1)(c)
PRIV-10	P0	Cookies and storage: LEG-30 and LEG-31.	Pass.	PECR

Suite PERF — Performance

ID	P	What to do	Expected result	Ref
PERF-01	P1	Lighthouse and WebPageTest on Home, Pricing, Sample shop and Help centre (mobile, simulated 4G, mid-range phone).	LCP ≤ 2.5 s, INP ≤ 200 ms, CLS ≤ 0.1.	15.2.10
PERF-02	P1	Results ready after the reference upload (1,000 orders) on a mid-range phone with 4G.	Usable within 3 seconds after processing.	15.2.10
PERF-03	P1	Large import: 50,000 rows.	Finishes within the time set in the v20 design, with a progress indicator. No browser freeze. Processed on the server.	Q10
PERF-04	P2	20 people using the app at once and 5 uploading at once (load test on staging).	No errors. Order limits stay correct (L8).	L8
PERF-05	P2	JavaScript bundle size.	Recorded. Flag anything over 500 KB compressed on the first load (the current bundle is about 870 KB uncompressed).	—

Suite SEO — Search engines, metadata and discoverability (K75, `/workspace/v20.1/Margins365-SEO-v20.1.md`)

Run on the production build at margins365.com (staging must be noindexed, see SEO-07). Use curl or "View source" for anything about the **HTML before JavaScript**, a headless crawler (for example Screaming Frog with JavaScript off, then on) for links, Google's Rich Results Test and the Schema.org validator for structured data, and Lighthouse for speed. The exact titles and descriptions are in SEO spec 5.1. Akthar or a developer with access verifies Search Console and Bing.

ID	P	What to do	Expected result	Ref
SEO-01	P0	`curl` each public route (`/`, `/sample-shop`, `/pricing`, `/help`, five `/legal/...` pages) with no JavaScript.	Each response contains that page's full visible text (H1, headings, body copy, prices, FAQ answers, legal text) and the header/footer links. It is not the empty `<div id="root">` shell, and no two routes return identical HTML.	SEO 3, A1
SEO-02	P0	Compare the no-JavaScript HTML with the rendered page for each public route, using a normal browser user agent and then Googlebot's.	Same content for both user agents (no cloaking). The rendered page doesn't remove or replace the prerendered text. Hydration causes no visible jump.	SEO 3.3
SEO-03	P1	Signed-in pages `/app`, `/app/shops`, `/account/info`, `/welcome`, `/invite/<token>`.	Each sends `X-Robots-Tag: noindex`, is disallowed in robots.txt, isn't in the sitemap and isn't linked from public pages except through Sign in.	SEO 3.5, 6
SEO-04	P0	Each public page: read `<title>` and meta description from the raw HTML.	They match SEO spec 5.1 exactly. Every title is ≤ 60 characters, unique and contains "Margins365". Every description is ≤ 155 characters and unique. No "Margins 365", "MarginOS" or "Sample report".	SEO 5, V1, V2
SEO-05	P1	Each public page: count H1s; list the heading order.	Exactly one H1, matching spec 5.1. H2/H3 levels never skip (no H1 → H3).	SEO 5, 11
SEO-06	P0	Each public page: read the canonical and robots meta.	`<link rel="canonical">` is the absolute `https://margins365.com/<route>` of the page itself (no www, no trailing slash, no query). Indexable pages have `index, follow`; `/sign-in` `noindex, follow`; `/reset-password` `noindex, nofollow`.	SEO 5.1
SEO-07	P0	Production and staging: check the `X-Robots-Tag` header and robots meta on Home.	Production has **no** site-wide noindex. Staging has `noindex, nofollow` and a password.	SEO 6
SEO-08	P1	Fetch `/robots.txt`.	Status 200, `text/plain`, content exactly as SEO spec 6, including the Sitemap line. Lighthouse "robots.txt is valid" passes.	SEO 6, A4

ID	P	What to do	Expected result	Ref
SEO-09	P1	Fetch `/sitemap.xml` and validate it.	Status 200, XML content type, valid sitemap. It lists exactly the indexable public pages (absolute https://margins365.com URLs, no www) with real `lastmod` dates. No signed-in, sign-in, reset, PDF or marginos.online URLs. Every listed URL returns 200 and is canonical to itself.	SEO 13
SEO-10	P0	Request `/this-does-not-exist`, `/pricing/extra`, `/legal/nothing`.	Status **404** (not 200), branded 404 page with the spec 5.1 title, `noindex`, links to Home, Pricing and Help centre.	SEO 4, ERR-01, A4
SEO-11	P1	Request `https://www.margins365.com/pricing?x=1`, `/pricing/`, `/Pricing`, `/sample-report`.	Each 301-redirects in **one hop** to `https://margins365.com/pricing?x=1`, `/pricing`, `/pricing` and `/sample-shop`.	SEO 7, A7
SEO-12	P0	From a normal internet connection, request `http://margins365.com/help` and `http://www.margins365.com/help`.	One 301 hop to `https://margins365.com/help`. The HTTPS response has `Strict-Transport-Security` with max-age ≥ 31536000.	SEO 7, A14, SEC-20
SEO-13	P1	Request `https://marginos.online/pricing?a=1`, `http://marginos.online/`, `https://www.marginos.online/help` (while the domain is still held).	301 to the same path and query on `https://margins365.com`. www.marginos.online either redirects the same way or the gap is logged for Akthar.	SEO 7, K73, DOM
SEO-14	P1	Crawl the site with JavaScript **off**, starting at Home.	Every public page is found by following `<a href>` links alone. Header, footer, "Start here", Sample shop and Help links are `<a href>` elements, not buttons. No `href="#"` or `javascript:` links.	SEO 11, A3
SEO-15	P2	List every internal link's text on public pages.	Descriptive text; no "click here" or "read more" alone. Internal links match the linking map in SEO spec 11.	SEO 11
SEO-16	P1	Each public page: read the Open Graph and Twitter tags.	`og:title`, `og:description`, `og:url` (= canonical), `og:type` website, `og:site_name` "Margins365", `og:locale` en_GB, `og:image` (absolute https), `og:image:width` 1200, `og:image:height` 630, `og:image:alt`;	SEO 8, PUB-16

ID	P	What to do	Expected result	Ref
			`twitter:card` summary_large_image with title, description, image and alt.	
SEO-17	P2	Paste Home, Pricing and Sample shop links into LinkedIn Post Inspector, the Facebook Sharing Debugger, WhatsApp and Slack.	Correct title, description and image show. No founding-offer price appears in the image.	SEO 8
SEO-18	P2	Fetch the OG image.	1200 × 630, PNG or JPG, < 300 KB, status 200, long cache. Text inside the centre safe area.	SEO 8
SEO-19	P1	Fetch `/favicon.ico`, `/icon.svg`, `/apple-touch-icon.png`, `/icon-192.png`, `/icon-512.png`, `/icon-maskable-512.png`, `/site.webmanifest`.	Each returns 200 with its real content type (not the Home HTML) and the sizes in SEO spec 9. The manifest has name and short_name "Margins365", start_url "/", theme_color #34726B and lists the icons. The `<head>` links to them.	SEO 9, A11
SEO-20	P1	Run Home and Pricing through the Rich Results Test and the Schema.org validator.	Organization, WebSite and SoftwareApplication (WebApplication) parse with no errors. Offers are in GBP with prices 39/79/129/199 monthly and 390/790/1290/1990 annual, VAT included, matching the page. No `aggregateRating` or `review` unless genuine reviews are shown on the page.	SEO 10
SEO-21	P2	Help centre (and Pricing if it still shows an FAQ): validate FAQPage.	FAQPage parses with no errors and every question and answer matches the visible FAQ word for word. (No FAQ rich result is expected in Google since May 2026.)	SEO 10
SEO-22	P2	Every public page except Home: validate BreadcrumbList.	Valid; names and URLs match the page path (for example Home › Legal › Terms).	SEO 10
SEO-23	P1	Read `<html lang>` and the hreflang tags on every public page.	`lang="en-GB"`. `hreflang="en-GB"` and `hreflang="x-default"` both point to the page's own canonical URL.	SEO 13
SEO-24	P1	Lighthouse mobile (simulated throttling), 3 runs each, median, on Home, Pricing,	LCP < 2.5 s, CLS < 0.1, TBT < 200 ms, Performance ≥ 90, SEO 100, Best	SEO 12,

ID	P	What to do	Expected result	Ref
		Sample shop and Help centre.	Practices ≥ 95, Accessibility 100. No console errors when signed out. Record the scores. (Baseline 11 Nov: Home Performance 89, LCP 2.9 s, CLS 0.079.)	PERF-01, A8
SEO-25	P2	Public pages: total JavaScript downloaded on first load (compressed).	≤ 150 KB, and the signed-in app, charts and import code aren't downloaded on public pages.	SEO 12.2, PERF-05
SEO-26	P1	Response headers for `/assets/*` files and for public HTML.	Hashed assets: `public, max-age=31536000, immutable`, served from the Cloudflare cache (HIT on second request). Public HTML is cached briefly and refreshed on deploy. Signed-in and API responses stay `private, no-store`.	SEO 12.3, A9
SEO-27	P1	Public pages: check images.	Every content image has meaningful alt text and decorative images have empty alt; width and height set; modern format (WebP/AVIF) with fallback; below-the-fold images lazy-load and the LCP image does not.	SEO 11
SEO-28	P1	Legal pages: request each "Download PDF".	PDF loads (status 200) and sends `X-Robots-Tag: noindex`; the HTML page is the canonical version.	SEO 3.6, K74
SEO-29	P0	Load public pages in a fresh browser profile and list every cookie, storage item and third-party request before any interaction.	Only the essential items in the Cookie notice (`__cf_bm`, session, UI localStorage; `m365_consent` once a choice is made). **No analytics, advertising or tracking** requests or cookies before consent; analytics is only Plausible after Accept (suites CONS, ANL).	SEO 13, LEG-30, K79
SEO-30	P1	Akthar or the developer with access: open Google Search Console and Bing Webmaster Tools.	Domain property for margins365.com verified by DNS in both. Sitemap submitted and "Success". URL inspection of each public page shows "URL is on Google" or "indexing requested", with Google's rendered HTML showing the	SEO 13

ID	P	What to do	Expected result	Ref
			page content.	
SEO-31	P2	Two weeks after launch: Search Console Page indexing and Core Web Vitals reports.	No soft 404s, no "Duplicate without user-selected canonical" for public pages, no signed-in URLs indexed. Core Web Vitals "Good" or "Not enough data". Log the results for Akthar.	SEO 13
SEO-32	P2	Search Google and Bing for "margins365" and "margins 365".	margins365.com is the first result, with the new title. (If not, log it; this can take days to weeks after indexing.)	SEO 14
SEO-33	P1	Home: read the H1 in the raw HTML and on phone, iPad and desktop.	Exactly one H1: "Know your true profit and where it leaks". The Product section headline "See where your profit is leaking." is unchanged. The hero layout doesn't break (K48 scaling).	K78, 23.17
SEO-34	P1	`/profit-leak-checklist` and `/multi-channel-profit` (Phase 2): raw HTML, metadata, sitemap, links.	Prerendered; title, description and H1 exactly as SEO spec 15.1; canonical to itself; in the sitemap; linked from Home, the Help centre and the calculator pages with `<a href>`.	K77, SEO 15.1
SEO-35	P1	Each published help article (Phase 2).	One H1, "Updated [date]", author "Margins365 team", sources for every fee or tax fact matching spec 16.2/16.3, "Not tax advice" on tax content, BreadcrumbList valid, in the sitemap. The VAT article has the accountant's sign-off recorded.	K77, 23.16
SEO-36	P1	Search the site, sitemap and all copy for a competitor comparison page: request `/compare`, `/compare/trueprofit-beprofit-sellerboard`, and search for "vs TrueProfit", "alternative to".	404 for the routes; no comparison page, link or sitemap entry exists (not approved).	K77

Suite PCALC — Free public calculators (K76, spec 23.15, PC-1–PC-6) — Phase 2 release

Run when K76 is delivered, after the core v20 pass. Use the golden examples in spec 23.15 and enter the example exchange rate ($1 = £0.75) by hand where the calculator allows it, or recompute the

listing fee at the shown ECB rate.

ID	P	What to do	Expected result	Ref
PCALC-01	P0	Etsy UK calculator: enter the Etsy golden example.	Revenue £28.95; fees £4.23 (transaction £1.88, regulatory operating fee £0.14, processing £1.36, listing £0.15, VAT on fees £0.71); return cost £0.58; CM £13.34 (46.1%); true profit £13.34 (46.1%); Healthy; break-even ROAS 2.17×; target price £11.05; break-even price £9.28.	23.15, 12.0, 16.2
PCALC-02	P0	Amazon UK calculator: enter the Amazon golden example.	Revenue £16.66; fees £6.10 (referral £3.00, other £3.10); return cost £0.50; CM £5.56 (33.4%); true profit £4.06 (24.4%); Healthy; break-even ROAS 3.00×; target price £15.83 including VAT; break-even price £13.83.	23.15
PCALC-03	P0	Shopify UK calculator: enter the Shopify golden example.	Revenue £44.99; fees £1.15; return cost £2.25; CM £24.39 (54.2%); true profit £16.39 (36.4%); Healthy; break-even ROAS 1.84×; target price £25.68; break-even price £22.38.	23.15
PCALC-04	P0	Margin calculator: enter the generic golden example.	Revenue £15.00; fees £2.46; return cost £0.60; CM £2.59 (17.3%); true profit £1.59 (10.6%); Healthy; break-even ROAS 5.79×; target price £17.85 including VAT; break-even price £15.67.	23.15
PCALC-05	P0	**Same engine:** upload a one-order test file to a test shop with the same figures as PCALC-03 (and an Etsy file matching PCALC-01), then compare the Control room's order figures with the calculator.	Identical revenue, fees, CM, true profit, verdict and target price to the penny. Development confirms in writing that the calculators import the product's calculation module and preset configuration (no copied formulas).	PC-2, 12.0–12.3
PCALC-06	P0	Each calculator: enter the target price shown, then the target price minus £0.01.	At the target price net margin is ≥ 10.0%; 1p less is below 10.0%. Changing the target margin to 15% and 0% (break-even) behaves the same way.	12.3, PC-4
PCALC-07	P1	Rounding boundaries: choose inputs where the margin is 9.95%	9.95% shows 10.0% Healthy; 9.94% shows 9.9% Thin; .005 rounds up (half-up).	12.2,

ID	P	What to do	Expected result	Ref
		and 9.94%, and a money value ending in .005.	Rounding happens only for display (totals use unrounded values).	12.3
PCALC-08	P1	Losing money and Not reachable: price below costs; then return rate 50% and fees so that % costs + returns + target ≥ 100%.	Verdict Losing money with a negative profit shown clearly. Target price reads "Not reachable at this margin". Break-even ROAS reads "not reachable" when CM ≤ 0.	12.0, 12.3
PCALC-09	P1	Validation: negative cost, letters, blank price, price 0, return rate 150%, quantity 0.	Field-level 12.7 messages; results hidden rather than wrong; no crash; nothing sent to the server.	12.7, PC-4
PCALC-10	P1	Amazon: low price where 15% is under £0.25 (for example £1.20); change category to Clothing at £14, £18 and £25.	Referral becomes the £0.25 minimum; clothing rates follow the 16.2 UK table (5%, 10%, 15%). Show the maths names the rate and its source.	16.2
PCALC-11	P1	Etsy: Offsite Ads on at 15% and 12%; then an order large enough that 15% exceeds $100.	Offsite Ads shows under ad spend (not fees), and is capped at $100 converted at the ECB rate. Toggling "VAT-registered" removes VAT on fees.	16.2, 12.8
PCALC-12	P1	VAT: tick "Prices include VAT" at 20%, 5% and 0%; untick.	Revenue excludes VAT; the target price including VAT = unrounded ex-VAT target × (1 + rate), rounded up to the next 0.01.	12.3, 16.3
PCALC-13	P0	**Privacy:** with DevTools Network open (analytics accepted), type values into every calculator and copy the result.	No request contains any entered value (no server call, no analytics property, nothing in the URL, nothing in storage). Only a `Calculator used` event with the calculator name may be sent.	PC-3, AN-2
PCALC-14	P1	Preset sources: open Show the maths and the fee table on each page.	Every preset shows its rate, base, source link and "last checked" date, matching spec 16.2. The estimate and "not tax or accounting advice" notice is visible above the results.	PC-5
PCALC-15	P1	Calls to action: signed out; signed in without a plan; on a trial or paid plan.	Signed out: "start your 14-day free trial" and "Open the Sample shop". On a trial or paid plan: "Go to Control room" and **no** trial CTA (V10).	23.15, V10

ID	P	What to do	Expected result	Ref
PCALC-16	P1	Accessibility: keyboard only and with VoiceOver/NVDA; 200% zoom; phone, iPad portrait and landscape.	Every input labelled; results announced politely; no layout shift while typing (CLS < 0.1); 44 px targets; WCAG 2.2 AA (axe: no serious or critical).	15, PC-6
PCALC-17	P1	SEO for each calculator page: raw HTML, metadata, sitemap.	Prerendered with the default worked example visible in the HTML; title, description and H1 exactly as SEO spec 15.1; FAQPage and BreadcrumbList valid; listed in the sitemap; canonical to itself.	SEO 15.1, PC-6
PCALC-18	P2	Preset change: in staging, change a 16.2 preset value (for example Etsy processing to 4.5%) in the shared configuration.	Both the calculator and the signed-in product use the new value with no other change; revert afterwards.	PC-2

Suite CONS — Consent banner (K79, spec 23.18, AN-4)

ID	P	What to do	Expected result	Ref
CONS-01	P0	Fresh browser profile: open Home, Pricing, a calculator and a legal page.	The banner shows on the first public page, at the bottom, without covering the H1 or blocking the page. Text as spec 23.18, with a link to the Cookie notice.	23.18
CONS-02	P0	Compare the two buttons.	"Accept analytics" and "Reject" have equal size, weight, colour prominence and position on every breakpoint. No pre-ticked boxes; no third "manage" path that is easier than Reject.	ICO, AN-4
CONS-03	P0	Close the banner with X and with Escape; reload.	Treated as Reject: no analytics loads, `m365_consent` = rejected, banner not shown again on reload.	23.18
CONS-04	P1	Accept, then reload and visit other public pages.	Banner doesn't reappear. `m365_consent` stores accepted, the notice version and the date.	23.18
CONS-05	P0	Footer Legal column → **Cookie settings**: switch from Accept to Reject, and back.	Choice changes immediately. After Reject no further analytics requests are sent on this or later pages. Withdrawing takes no more steps than accepting.	AN-3
CONS-	P1	Set the stored date 12	The banner asks again in both cases.	23.18

ID	P	What to do	Expected result	Ref
06		months and a day back; separately, change the Cookie notice version in staging.		
CONS-07	P1	Keyboard and screen reader on the banner and Cookie settings.	Reachable, announced with meaningful names, visible focus, focus not trapped, 44 px targets; axe has no serious or critical issues; banner causes no layout shift (CLS < 0.1).	15, AN-4
CONS-08	P1	Signed in on a trial plan: open `/app`, `/account/info`, then a public page.	No banner on signed-in pages. On public pages the stored choice applies.	23.18
CONS-09	P1	Footer on every page.	The Legal column has Terms, Privacy, Refunds & cancellation, DPA & subprocessors, Cookies and **Cookie settings**; each works.	K64, K79

Suite ANL — Analytics gating and data (K79, spec 23.18, AN-1–AN-6)

ID	P	What to do	Expected result	Ref
ANL-01	P0	Fresh profile, DevTools Network, before any choice: load every public page.	**No request** to plausible.io or any analytics host; no analytics script in the page.	AN-1
ANL-02	P0	After Reject, after closing the banner, and with Global Privacy Control on (`Sec-GPC: 1`; Firefox or Brave setting).	No analytics request on any page. With GPC on, the banner is not shown and nothing loads; opting in later through Cookie settings is still possible and then works.	AN-1
ANL-03	P0	Signed in (any plan): use `/app/*`, `/account/*`, `/welcome`, `/invite/<token>`, `/sign-in`, `/reset-password` with analytics accepted.	No analytics request on any of them.	AN-1, 23.18
ANL-04	P0	After Accept: inspect every analytics request payload.	Page URL is the canonical path with no query string, token, email or ID. Only the events Calculator used (calculator name), Start trial clicked, Sample shop opened, Contact form sent and Checkout started	AN-2

ID	P	What to do	Expected result	Ref
			appear, with no personal data or entered values.	
ANL-05	P1	In the Plausible dashboard (Akthar's account): check page views and the five goals after a scripted test visit.	Views and goals are recorded for the test visit.	AN-2
ANL-06	P0	After Accept: list cookies and storage set by analytics.	None. Only the essential items in the Cookie notice v20.1 exist (`__cf_bm`, session, `m365_consent`, app preferences).	AN-5, LEG-30
ANL-07	P0	Published legal texts in the analytics release.	Cookie notice, Privacy Policy and DPA & subprocessors show **Version 20.1** and describe Plausible (provider, purpose, consent basis, EU location, no cookies, 24-month statistics retention), matching the live behaviour. Until analytics is live, the site still shows v20 texts.	AN-6, LEG-10
ANL-08	P1	Third-party requests with analytics accepted.	The only analytics host contacted is Plausible's (or a first-party proxy path to it). No Google Analytics, Meta, TikTok or other trackers.	LEG-32
ANL-09	P2	Performance with analytics accepted (Lighthouse, Home, mobile).	The analytics script loads asynchronously and doesn't push LCP over 2.5 s or CLS over 0.1.	SEO-24

Suite ERR — Errors and empty states

ID	P	What to do	Expected result	Ref
ERR-01	P1	404 and 500 pages.	Branded, with the right HTTP status and a way back. No stack traces.	G1
ERR-02	P1	The API is down (simulate it): load the Control room, Plan & billing and the contact form.	A clear error with a retry option. No blank screen and no false success.	—
ERR-03	P1	Stripe is unavailable at checkout.	A clear message. No trial is created.	12.10
ERR-04	P1	Every form shows an error for every server error code (400, 401, 403, 409, 413, 422, 429,	A human-readable message. 429 shows a wait-and-retry message.	—

ID	P	What to do	Expected result	Ref
		500).		
ERR-05	P2	Empty states: no shops (Scale with only one), no members, no invoices yet, no suggestions, no data.	A helpful empty state with the next action.	CR-11

Suite GAP — Gap audit 11 Nov 2026 (v20.1): one test per gap

Each test closes the gap with the same number in the Changes pack v20.1. Use the RG-2 method: network log, server record, Stripe Dashboard (test mode), SES inbox, second device.

ID	Pri	Steps	Expected	Ref
GAP-01	P0	Do it: Cancel trial / subscription reaches Stripe (12.5A, 23.10, K89). Then check the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	Stripe shows cancel_at_period_end (or canceled) and no upcoming invoice before any success; pop-up, email, status on every device (K89 CX-1–CX-9) Today: browser-only — Confirm cancel only changes browser state; no cancel route (8 probes return 405 like a made-up address); Stripe stays Trialing and would charge.	GA-01
GAP-02	P0	Check every part of: Trial is 14 days, set by the server (K38, 12.5).	The server always creates a 14-day trial and ignores any trial length from the browser; a request with 60 days still gives 14 in Stripe Today: partial — Server copy uses the trial length sent by the browser (`trialDays` in the request body); the browser sends 14, but any value is accepted.	GA-02
GAP-03	P0	Do it: One trial per account; per card by default (23.9, K40). Then check the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	The server refuses a second trial for the same account (and the same card fingerprint by default) with a clear message; a direct API call is refused too Today: browser-only — The “already used its free trial” check runs only in the browser; the server copy creates Checkout without checking.	GA-03
GAP-04	P0	Do it: No second subscription for an account that already has one (12.10 duplicate Checkout). Then check the network log, the server record, Stripe where relevant, and a second device or private	The server refuses Checkout when the account has a trialing, active or past-due subscription; two parallel Checkouts give one subscription Today: browser-only — “You already have an active plan” is checked only in the browser; the server copy	GA-04

ID	Pri	Steps	Expected	Ref
		window. Clear browser storage and check again.	creates a new Checkout for any signed-in user.	
GAP-05	P0	Prove with staging, current server code, Stripe test mode or SES: Founding price charged at Checkout: 50% for 6 monthly payments, 25% off the first annual year (12.5C, K72).	The server (not the browser) decides eligibility and applies the Stripe coupon; Checkout, the first invoice and Plan & billing show the founding amount to the penny; month 7 / year 2 is the full price Today: unverifiable from outside — Pricing shows £19.50 etc.; the browser sends `founding: true`; the server copy ignores it and applies no coupon. Live server may differ.	GA-05
GAP-06	P0	Prove with staging, current server code, Stripe test mode or SES: Founding places: first 100 paying users, safe under parallel Checkouts (FO-1–FO-7).	A place is counted once, atomically, at the point K72 defines; the 101st parallel Checkout gets the normal price; the Pricing counter equals the database count Today: unverifiable from outside — `/api/founding` returns cap 100, sold 0 from the server; no code seen that counts a place on payment or reserves it safely.	GA-06
GAP-07	P0	Check every part of: Stripe events update the account (12.10).	Every event in 12.10 maps to the documented state; no “free” plan; past-due, cancel scheduled and ended states shown in Plan & billing; replays are ignored Today: partial — Handles checkout completed, subscription updated (ignores cancel_at_period_end) and deleted (sets the retired “free” plan); no invoice.paid, invoice.payment_failed, trial_will_end or payment-action events.	GA-07
GAP-08	P1	Look for and use: Change plan: upgrade (prorated) and downgrade (at renewal); trial change keeps end date, no charge (23.8, 12.4, K69).	Owner can upgrade and downgrade; Stripe shows the new price with proration (paid) or the new day-15 amount (trial); limits change only after Stripe confirms Today: missing — Change plan opens the plans pop-up; choosing a plan shows “You already have an active plan”; no server plan-change route.	GA-08
GAP-09	P1	Look for and use: Change between monthly and annual at renewal (23.8).	Interval change is scheduled for renewal and shown in Plan & billing and Stripe Today: missing — No interval change anywhere in the app.	GA-09

ID	Pri	Steps	Expected	Ref
GAP-10	P1	Look for and use: Payment method and invoices through a Stripe-hosted page (12.10, 23.8).	Plan & billing opens a Stripe-hosted page for card and invoices and returns to Plan & billing; cancellation stays in Plan & billing Today: missing — No Update card or Invoices control; `/api/billing/portal` does not exist.	GA-10
GAP-11	P0	Do it: Paid access end date comes from Stripe (12.5A). Then check the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	Access end equals Stripe current_period_end (paid) or trial_end; never estimated Today: browser-only — Browser cancel uses “now + 30 days” when it has no period end.	GA-11
GAP-12	P1	Check every part of: Plan status is looked up reliably (12.10).	Plan is read from the stored Stripe customer and subscription IDs for that account Today: partial — Server copy finds the plan by scanning the last 40 completed Checkouts of all customers; after 40 sign-ups an account can lose its plan if a webhook was missed.	GA-12
GAP-13	P1	Look for and use: Daily Stripe ↔ account reconciliation with alerts (12.10).	A daily job compares every subscription with the account record and alerts on mismatches Today: missing — No scheduled job in the server code.	GA-13
GAP-14	P0	Check every part of: Refund ends access and schedules deletion per policy (12.5, 12.6).	A refund under the policy ends access and schedules the wipe with dated notice; no “free” plan Today: partial — Refund or lost dispute sets the retired “free” plan.	GA-14
GAP-15	P1	Check every part of: Stripe return addresses fixed by the server (12.10).	Server sets margins365.com return URLs; a request with another address is ignored Today: partial — Server copy takes success and cancel URLs from the browser.	GA-15
GAP-16	P0	Look for and use: Legal acceptance recorded: document, version, time (K74, LG, 23.13).	Sign-up/Checkout records the Terms and Refunds version accepted with a timestamp; Checkout shows the links; the trial email links to them Today: missing — No acceptance step or record at sign-up or Checkout; Checkout code has no terms consent.	GA-16
GAP-	P0	Look for and use: Trial started	K90 TS-1–TS-5 Today: missing — Server sends only	GA-

ID	Pri	Steps	Expected	Ref
17		email (23.12, K90).	verification and password emails.	17
GAP-18	P0	Look for and use: Trial reminder 3 days before the end (12.5A).	One reminder per trial, 3 days before, with plan, amount, date and Plan & billing link; none after cancel Today: missing — No scheduler and no trial_will_end handling.	GA-18
GAP-19	P1	Prove with staging, current server code, Stripe test mode or SES: Payment receipt and invoice (Link/Stripe) (23.12).	A test conversion produces a receipt with the Margins365 name and VAT-inclusive amount Today: unverifiable from outside — Depends on Stripe/Link email settings.	GA-19
GAP-20	P0	Look for and use: Payment failed / final failure (S7, 23.12).	Each failed charge sends the email with update-card link; final failure ends access with dated deletion notice Today: missing — No invoice.payment_failed handling, no email.	GA-20
GAP-21	P0	Look for and use: Cancellation confirmation (12.5A, K89).	K89 CX-3 Today: missing — No email exists.	GA-21
GAP-22	P0	Look for and use: Founding price ends soon, 14 days before month 6 ends (K72).	Founding accounts get one notice 14 days before the price rises, with both amounts and the date Today: missing — No scheduler.	GA-22
GAP-23	P1	Look for and use: 80% of order limit, owner and members (12.4).	First crossing of 80% in a billing month sends one email to owner and members Today: missing — Usage is counted only in the browser; no email.	GA-23
GAP-24	P1	Look for and use: Data deleted email when the wipe runs (12.6).	Sent once after the wipe; states what was deleted; contains no data Today: missing — No wipe job, no email.	GA-24
GAP-25	P1	Look for and use: Members get the dated warning when the owner cancels (23.3, 23.10).	Every active member gets the dated notice once Today: missing — No member list and no email.	GA-25
GAP-26	P1	Look for and use: Seat invitation email (23.3 ST-2).	Invite email with Accept link to /invite/:token arrives via SES; single use, 7 days Today: missing — Team screen says “Invite saved on the server… Email delivery follows the seats EML suite.” — no email.	GA-26

ID	Pri	Steps	Expected	Ref
GAP-27	P1	Look for and use: “You no longer have access” when a member is removed (23.3).	Removal sends the email and ends their sessions at once Today: missing — No remove-member function.	GA-27
GAP-28	P1	Prove with staging, current server code, Stripe test mode or SES: Contact notification and visitor confirmation (23.11, K84, K88).	A real test message reaches info.marginos@gmail.com with Reply-To the visitor; confirmation has the K88 sentence and no message text Today: unverifiable from outside — `/api/contact` exists; not sent from outside (no real messages); pop-up still says “can’t promise a reply time”.	GA-28
GAP-29	P1	Prove with staging, current server code, Stripe test mode or SES: Suggest a feature emailed to info.marginos@gmail.com (K83).	A test suggestion arrives with every K83 field and Reply-To the submitter Today: unverifiable from outside — Route needs sign-in; server copy stores only.	GA-29
GAP-30	P2	Check every part of: Brand “Margins365” in every email (K59).	Every subject and body says Margins365 Today: partial — Server copy: verification, reset and password emails say “Margins 365”.	GA-30
GAP-31	P2	Check every part of: No email asks for a reply to support (K86).	Wording points to Help centre Contact us; Reply-To follows K86 Today: partial — “Your password was changed” says “reply to this email or contact support from the privacy policy contact address”.	GA-31
GAP-32	P0	Prove with staging, current server code, Stripe test mode or SES: SES production access, DKIM, MAIL FROM, SPF, DMARC proof (K86).	K86 proof attached: SES identity verified, production access, headers pass SPF/DKIM/DMARC at Gmail, Outlook, iCloud Today: unverifiable from outside — Health check says SES configured; sandbox status and DNS proof not shown.	GA-32
GAP-33	P0	Check every part of: Password reset link always on margins365.com (5.1, K57).	The server builds every email link from a fixed margins365.com address; a request with another origin still produces a margins365.com link Today: partial — Server copy builds the reset link from an address the browser sends (`origin`); an attacker could make the email link point to another site.	GA-33
GAP-34	P0	Do it: No pretend sign-in, reset or verification when the server fails (fake-success ban). Then check	On any server or network failure, show an error and stay signed out; remove every demo fallback Today: browser-only — If the request fails, the app	GA-34

ID	Pri	Steps	Expected	Ref
		the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	falls back to a browser demo: “Signed in”, “Verification email sent”, reset success, with no server.	
GAP-35	P1	Check every part of: Google sign-in verified for this app (5.1).	Server verifies a Google ID token whose audience is the Margins365 client ID; tokens for other apps are refused Today: partial — Server copy accepts a Google access token and reads the profile without checking it was issued to Margins365.	GA-35
GAP-36	P1	Check every part of: Rate limits shared and durable (23.19.5, 5.1).	Limits are held in shared storage and survive restarts and multiple servers Today: partial — Server copy keeps sign-in and reset limits in memory per server; they reset on restart and are not shared.	GA-36
GAP-37	P1	Do it: Audit log on the server (12.10, 23.0, K89). Then check the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	Security, billing and admin events are written on the server and readable only by admins Today: browser-only — Audit events are kept in the browser (`marginos.audit.v1`, 200 events).	GA-37
GAP-38	P2	Check every part of: Health endpoint shows no configuration detail.	Public health check returns only ok Today: partial — `/api/health` publicly shows database, Stripe and SES configuration flags and region.	GA-38
GAP-39	P2	Check every part of: security.txt and stricter CSP (SEC suite).	security.txt published; inline scripts removed or hashed Today: partial — No /.well-known/security.txt; CSP allows inline scripts.	GA-39
GAP-40	P0	Do it: Product data stored on the server, per shop (F1, 23.13). Then check the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	All product data is stored server-side per account and shop; another device shows the same data; browser holds only preferences and a cache cleared at sign-out Today: browser-only — Order rows, costs, ads, saved datasets and scenarios are saved in the browser (`marginos.v6` and per-user keys); no upload or data routes (404).	GA-40

ID	Pri	Steps	Expected	Ref
GAP-41	P0	Do it: Hard monthly order limits enforced on the server (12.4, 12.4A). Then check the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	The server counts unique orders per account and period and blocks over-limit imports (12.4A tests); browser changes cannot bypass it Today: browser-only — Unique orders are counted in the browser from local data; clearing storage resets the count.	GA-41
GAP-42	P0	Look for and use: Data wiped when access ends; backups within 7 days (K39, 12.6, 18, 19).	An idempotent deletion job wipes every store at access end, writes a tombstone and sends the email; backups age out within 7 days Today: missing — No deletion job; data stays in the browser; account remains with a “free” plan.	GA-42
GAP-43	P0	Look for and use: Account closes at access end; members lose access (K51).	At access end the account and memberships close; sign-in explains the account is closed; a later sign-up starts empty Today: missing — No closure; webhook sets a “free” plan.	GA-43
GAP-44	P0	Check every part of: Privacy Policy matches what the product does (Privacy v20.1).	GA-40 and GA-42 are built before launch, so the policy is true; no policy change needed Today: partial — Policy says data is held at DigitalOcean London; live product data is in the browser (GA-40).	GA-44
GAP-45	P1	Check every part of: Download my data (CSV) for all the account’s shops, owner and members (12.6, 23.3).	Export is built on the server from all shops; same file on any device and for members Today: partial — CSV is built from data in this browser only.	GA-45
GAP-46	P1	Do it: Business Info saved on the server: country, address, VAT number, website (K70, 23.4). Then check the network log, the server record, Stripe where relevant, and a second device or private window. Clear browser storage and check again.	All Info fields saved on the server; members see them read-only Today: browser-only — Name, business name and phone go to the server; country, address, VAT number and website only to the browser (`m365_info_extra`).	GA-46
GAP-47	P1	Do it: Cancellation reason stored on the server (K71, CA-2). Then check the network log, the server record, Stripe where relevant,	Reason saved on the server with the 23.13 retention Today: browser-only — Saved in the browser (`m365_cancel_reasons`).	GA-47

ID	Pri	Steps	Expected	Ref
		and a second device or private window. Clear browser storage and check again.		
GAP-48	P1	Look for and use: Privacy requests: export and deletion handled within one month (Privacy v20.1).	An admin can export and delete one account on request, logged Today: missing — No admin tool to find, export or delete an account.	GA-48
GAP-49	P1	Check every part of: Shops: add, rename, remove, switch, per-shop data (23.2 SH-1–SH-7).	Owner can switch shops; each shop’s data is separate on the server; removal deletes that shop’s server data after confirmation Today: partial — Add, rename and remove call `/api/shops` (server, sign-in required); no shop switcher; shop data lives in the browser.	GA-49
GAP-50	P1	Look for and use: Invite, accept, members list, remove, roles and permissions (23.3 ST-1–ST-7).	ST-1–ST-7 pass: accept with the same verified email, members see account data, owner-only actions refused for members (403) Today: missing — Invites are saved on the server, but `/invite/:token` is a 404, there is no members list or remove, and members cannot see shared data.	GA-50
GAP-51	P2	Check every part of: No developer wording on screens (15.4).	Customer wording only Today: partial — Team screen: “Email delivery follows the seats EML suite”, “Pending invites are stored on the server”.	GA-51
GAP-52	P1	Check every part of: Plan & billing shows plan, interval, status, next charge date and amount, founding end, usage, shops and seats (23.8).	Every 23.8 item shown from server data, amounts matching Stripe Today: partial — Shows “Access: trial · Plan: pro · Features: …”.	GA-52
GAP-53	P1	Look for and use: Members see “Only the account owner can manage billing.” (23.8 PB-1).	Member opening /account/billing sees the message; billing APIs refuse members Today: missing — Text not in the app.	GA-53
GAP-54	P2	Check every part of: Trial banner shows first payment amount, date and founding wording (23.9).	Banner shows the 23.9 sentence Today: partial — Banner shows only “You’re on your [Plan] free trial until [date].”.	GA-54

ID	Pri	Steps	Expected	Ref
GAP-55	P1	Check every part of: No “Cancel before day 14 and pay nothing” (K81, K87).	Use “Cancel before your trial ends on [date] and pay nothing” Today: partial — Still in 3 places (trial line, plan text, Plan & billing).	GA-55
GAP-56	P2	Look for and use: Contact wording “Thank you for contacting us, we aim to respond within 24 hours.” (K88).	K88 HELP-33–HELP-37 Today: missing — Pop-up still says “We read every message, but we can’t promise a reply time.”.	GA-56
GAP-57	P1	Look for and use: Trial-start confirmation on screen (K90).	K90 TS-4 Today: missing — Return from Checkout opens the app with no confirmation.	GA-57
GAP-58	P2	Check every part of: Retired “Keep Pro” code and Free-plan wording removed (K69, v18 Free plan retired).	No Keep Pro code; no Free-plan or Free-upload wording (PUB-14) Today: partial — A browser-only “Keep Pro” plan change is still in the code (not shown); 3 screens still say “Free upload” (“Start fresh does not restore Free uploads for today.”).	GA-58
GAP-59	P1	Look for and use: Routes /sign-in, /reset-password, /welcome, /invite/:token (23.1, K63).	Each route works on refresh; reset and invite emails link to them Today: missing — All four return 404; the reset link uses /?reset=.	GA-59
GAP-60	P1	Check every part of: Phase 2 calculator and landing pages wait for their release gate (K76, K77, exit criterion 15).	Remove from sitemap and set noindex until the gate passes, or pass PCALC now Today: partial — Six Phase 2 pages are live and listed in sitemap.xml before PCALC and SEO-34–36 have passed.	GA-60
GAP-61	P2	Look for and use: Share image and favicon (SEO spec).	og:image on every public page; /favicon.ico served Today: missing — Pages declare a large share card but have no og:image; /favicon.ico is 404.	GA-61
GAP-62	P2	Check every part of: Prerendered content for legal and Sample shop pages (K75).	Prerendered HTML contains the full page text Today: partial — Legal pages prerender only a title and one line; full text needs JavaScript.	GA-62
GAP-63	P2	Check every part of: sitemap.xml served as XML; mixed-case URLs resolve; 404 has no canonical (SEO, NAV-16).	application/xml; case-insensitive redirect; no canonical on 404; JSON 404 for /api Today: partial — sitemap content type is application/octet-stream; /Pricing is 404; 404 pages carry a canonical; unknown /api GETs return the HTML 404.	GA-63

ID	Pri	Steps	Expected	Ref
GAP-64	P1	Prove with staging, current server code, Stripe test mode or SES: Pop-ups scroll on phones, banner removed, pages open at the top (K80–K82).	MOB-01–MOB-13 and NAV-33–NAV-36 pass on a real iPhone, Android and iPad Today: unverifiable from outside — Not re-tested on this bundle; last test (17:30) failed (G14–G16).	GA-64
GAP-65	P2	Prove with staging, current server code, Stripe test mode or SES: Admin inbox for contact messages, deleted after 12 months (23.11).	Owner-only admin view; 12-month deletion job Today: unverifiable from outside — No admin route visible.	GA-65
GAP-66	P1	Prove with staging, current server code, Stripe test mode or SES: Backups and scheduled clean-up (19).	Backup schedule, 7-day expiry and restore test documented and proven Today: unverifiable from outside — Not visible from outside.	GA-66

Suite E2E — Mandatory end-to-end matrix (v20.1, RG-4)

Run with real Stripe test-mode accounts on staging. For every flow record four things: the app on two devices, the Stripe Dashboard (test mode), the email actually received through SES (inbox, headers passing SPF, DKIM and DMARC), and the server record or audit entry. Use Stripe test clocks for trial ends, renewals and retries. A flow passes only if all four match. No live-mode trial is taken until every E2E test passes.

ID	Pri	Flow and steps	Expected	Ref
E2E-01	P0	Email sign-up → verification link → sign in on a second device.	App (2 devices): Signed in on both; verified flag on the server. Stripe Dashboard (test mode): — SES email received (inbox and headers): “Verify your email” received; link on margins365.com; SPF/DKIM/DMARC pass. Server record: User and session rows; audit entry.	RG-2, RG-4
E2E-02	P0	Google sign-in (new and existing account); a token from another app is refused.	App (2 devices): Same account on a second device. Stripe Dashboard (test mode): — SES email received (inbox and headers): — Server record: User linked to Google; refused token logged.	RG-2, RG-4
E2E-03	P0	Password reset → new password → old sessions ended; request sent with another origin.	App (2 devices): Signed in with the new password only. Stripe Dashboard (test mode): — SES email received (inbox and headers): Reset email with a margins365.com link (even with another origin); “Your password was changed”. Server	RG-2, RG-4

ID	Pri	Flow and steps	Expected	Ref
			record: Token used once; sessions cleared.	
E2E-04	P0	Start a trial on each plan (Starter, Growth, Pro, Scale), monthly and annual.	App (2 devices): Pop-up after server confirmation; Plan & billing shows plan, trial end, first charge; same on a second device. Stripe Dashboard (test mode): Subscription trialing, trial_end = start + 14 days, correct price; one subscription per account. SES email received (inbox and headers): Trial started email (K90) with every field. Server record: Account plan, trial end; audit.	RG-2, RG-4
E2E-05	P0	Founding trial (monthly and annual) → test clock through 7 monthly invoices / 2 annual.	App (2 devices): Founding amount shown, then full price. Stripe Dashboard (test mode): Coupon applied: 6 invoices at 50% (annual: first year 25% off), then full price; to the penny. SES email received (inbox and headers): Trial started with founding wording; founding ends soon 14 days before month 6 ends. Server record: Founding place counted once.	RG-2, RG-4
E2E-06	P0	Cancel a trial → test clock past trial end.	App (2 devices): Pop-up after Stripe check; “Cancelled — access until”; same on a second device; closed after end. Stripe Dashboard (test mode): cancel_at_period_end, no upcoming invoice; no charge; subscription ended. SES email received (inbox and headers): Cancellation email; data deleted email after the wipe. Server record: Cancellation and deletion records; tombstone; audit.	RG-2, RG-4
E2E-07	P0	Let a trial convert on day 15 (test clock), with a reminder 3 days before.	App (2 devices): Status active; next charge shown. Stripe Dashboard (test mode): Exactly one invoice for the displayed amount on day 15. SES email received (inbox and headers): Reminder 3 days before; receipt (Link/Stripe). Server record: Plan active.	RG-2, RG-4
E2E-08	P1	Upgrade a paid plan mid-period.	App (2 devices): New limits after Stripe confirms. Stripe Dashboard (test mode): Prorated invoice; new price. SES email received (inbox and headers): Plan change email (if K93 approved). Server record: Plan and audit.	RG-2, RG-4
E2E-09	P1	Downgrade a paid plan; change monthly → annual.	App (2 devices): Shown as scheduled for renewal. Stripe Dashboard (test mode): Subscription schedule / price change at renewal. SES email received (inbox and headers): Plan change email (if K93 approved). Server record: Scheduled change stored.	RG-2, RG-4

ID	Pri	Flow and steps	Expected	Ref
E2E-10	P1	Update the card and open invoices from Plan & billing.	App (2 devices): Returns to Plan & billing. Stripe Dashboard (test mode): Stripe-hosted page; new default payment method; invoices listed. SES email received (inbox and headers): — Server record: Audit entry.	RG-2, RG-4
E2E-11	P0	Payment failure: card that declines at renewal → retries → final failure.	App (2 devices): Past-due banner; then closed at the stated time. Stripe Dashboard (test mode): invoice.payment_failed events; subscription ends after retries. SES email received (inbox and headers): Payment failed emails; final failure; data deleted. Server record: State changes; deletion job; audit.	RG-2, RG-4
E2E-12	P0	Cancel a paid plan → access end → closure → wipe; resubscribe on a second account before the end.	App (2 devices): Dates from Stripe; resubscribe restores without a new trial. Stripe Dashboard (test mode): cancel_at_period_end then ended; resubscribe sets it false. SES email received (inbox and headers): Cancellation; data deleted; resubscribe confirmation. Server record: Records and audit.	RG-2, RG-4
E2E-13	P0	Refund the first payment from the Stripe Dashboard.	App (2 devices): Access ends; account closes and is wiped as the policy says; no “free” plan. Stripe Dashboard (test mode): Refund recorded. SES email received (inbox and headers): Closure / data deleted email as specified. Server record: State and deletion record.	RG-2, RG-4
E2E-14	P0	Cancel and resume a subscription in the Stripe Dashboard (provider-side).	App (2 devices): App shows the same status as an in-app cancel. Stripe Dashboard (test mode): Changes made in the Dashboard. SES email received (inbox and headers): Same cancellation email, once. Server record: Webhook processed once.	RG-2, RG-4
E2E-15	P0	Try a second trial and a second Checkout on the same account (UI and direct API), and 2 parallel Checkouts.	App (2 devices): Refused with a clear message. Stripe Dashboard (test mode): Only one subscription exists. SES email received (inbox and headers): — Server record: Refusals logged.	RG-2, RG-4
E2E-16	P0	Send 2 Checkouts in parallel when 1 founding place is left (staging).	App (2 devices): One founding price, one normal price. Stripe Dashboard (test mode): One coupon applied. SES email received (inbox and headers): — Server record: Counter = 100.	RG-2, RG-4

ID	Pri	Flow and steps	Expected	Ref
E2E-17	P1	Scale owner adds, renames, switches and removes shops; open on a second device.	App (2 devices): Same shops and per-shop data on both devices. Stripe Dashboard (test mode): — SES email received (inbox and headers): — Server record: Shops and per-shop data on the server.	RG-2, RG-4
E2E-18	P1	Pro owner invites a member → member accepts with the same verified email → sees data → owner removes them.	App (2 devices): Member sees account data, no owner actions; removal ends sessions. Stripe Dashboard (test mode): — SES email received (inbox and headers): Invitation; removed email. Server record: Invite and membership records; audit.	RG-2, RG-4
E2E-19	P0	Upload to 80% and then past the limit; repeat on a second device and after clearing browser storage.	App (2 devices): 80% notice; over-limit file not imported; same count on every device. Stripe Dashboard (test mode): — SES email received (inbox and headers): 80% email to owner and members, once. Server record: Usage counted on the server.	RG-2, RG-4
E2E-20	P1	Contact us signed out and signed in; Suggest a feature signed in.	App (2 devices): Pop-ups only after storage. Stripe Dashboard (test mode): — SES email received (inbox and headers): Notifications at info.marginos@gmail.com (Reply-To the sender); visitor confirmation with the K88 sentence and no message text. Server record: Stored messages.	RG-2, RG-4
E2E-21	P1	Download my data as owner and as member on a second device.	App (2 devices): Same CSV, all shops. Stripe Dashboard (test mode): — SES email received (inbox and headers): — Server record: Export built on the server.	RG-2, RG-4
E2E-22	P0	Force failures (server down, Stripe error, SES error) on sign-in, reset, Checkout, cancel, upload, invite, contact.	App (2 devices): Error shown, nothing changed, no success message (RG-1). Stripe Dashboard (test mode): Nothing changed. SES email received (inbox and headers): No success email. Server record: Failure logged.	RG-2, RG-4
E2E-23	P0	After a full session, inspect browser storage (RG-3).	App (2 devices): Only allowlisted keys. Stripe Dashboard (test mode): — SES email received (inbox and headers): — Server record: —	RG-2, RG-4

Suite REG — Regression of earlier decisions K22–K58

Each decision must still hold, unless v20 replaces it. Record Pass, Fail or Replaced.

K	What must still hold	Covered by
K22	Four tiers at £39, £79, £129 and £199 including VAT; annual = 10× monthly; lifetime licences already sold are honoured. *(Its 25% founding offer is still removed;* ***v20 adds a 50% founding offer for 6 months instead****, see OFF.)*	PUB-07, CHK-25, CHK-28, OFF
K23	Hard unique-order limits and all the L rules	LIM
K24	Tier features, history, shops, platforms, seats	CR-02, LIM-19–21, SHOP, SEAT
K25/K53	TikTok: the importer stays in development. Public copy says "Excel import coming soon"	PUB-13, IMP-18
K26	Light only, no dark mode	CR-09
K27	No PDF icon in the header. The PDF sits beside the results on Growth, Pro and Scale	CR-04
K28/K57	Google first, then email. Password reset	AUTH
K29/K51	No Delete account button. Cancelling closes the account	PROF-07, CAN, DEL
K30	Real public pages. Three settings sections	PUB-01, PROF-09
K31/K39	Managed Payments, retries, first-payment refund. Data wiped at access end, backups gone within 7 days	CHK-18–21, DEL
K36	SES Stockholm. DigitalOcean London	PRIV-02, EML-18
K38	14-day trial, card upfront, charged on day 15, one trial per account	CHK-01–10
K41	No support target or SLA (the K88 contact aim “we aim to respond within 24 hours” is the only allowed reply-time wording)	PUB-14, HELP-37
K42	**Replaced by V20** (founding offer brought back as 50% for 6 months)	OFF
K43	Trial wording (the banner part is **Replaced** by K81: banner removed)	MOB-12, MOB-13,

K	What must still hold	Covered by
		CHK-02
K44	"What files do I need?" and "How to use this platform"	PUB-05
K45/K48	Phone, iPad and layout rules	RESP
K46	One primary call to action, "Start 14-day free trial", when signed out. **Not shown when signed in with a trial or paid plan (V10)**	NAV-01, NAV-03
K47/K55	Shops and Seats explained as plain sub-text, with no (i) or "?"	PUB-07
K49/K55	Product section copy; headline "See where your profit is leaking."	PUB-05
K50	Cancellation only in-platform, by the owner	CAN, SEAT-09
K52	**Replaced by V17** (the trial is the tier you choose)	TRL
K54/K55	Centring; Most popular and "Command centre" on Pro; expanded comparison. **The FAQ moves to the Help centre (V7)**	PUB-07, HELP-02
K56	The differentiation line	PUB-05
K58	**Updated by V1** (Margins365, one word) and **V21** (move fully to margins365.com)	BR, DOM
K59–K74	All v20 decisions	Suites in section 3.2 (V1–V22)
Calculations	12.0–12.3 unchanged	CALC

7. How to report a defect

Use this template for every defect, one defect per report.

```
ID: DEF-[suite]-[number] (e.g. DEF-SHOP-004) Title: [Where] [what is wrong] (e.g. "Scale shop switcher: dashboard keeps shop 1 data after switching") Priority: P0 / P1 / P2 / P3 Test case: [e.g. SHOP-04] Spec reference: [e.g. V12, 12.4, S28] Environment: Staging / Production · build or commit · date and time (Europe/London) Device / OS: [e.g. iPad Air, iPadOS 19, landscape] Browser: [e.g. Safari 19.1] Viewport: [e.g. 1194×834] Account: [e.g. qa-scale-owner-02, Scale annual, founding] URL: [the exact URL] Steps: 1. ... 2. ... 3. ... Expected: [what the spec says should happen, quoting the spec where possible] Actual: [what happened] Evidence: [screenshot or video link; HAR file; email headers; Stripe event ID; server log
```

```
ID] Frequency: Always / Intermittent (x of y tries) Impact: [who is affected and how: money, legal, data, security, UX] Notes / tags: [SPEC-QUESTION | EXTERNAL-CONFIG | REGRESSION | KNOWN-GAP G#]
```

Re-test each fixed defect on the same device and browser, and once more on one other device class. Close it only with new evidence.

---

8. Exit criteria (release is blocked until all are met)

1. **Zero open P0 and P1 defects.** P2s are only allowed with Akthar's written agreement, and each one has a fix date.
2. **Every test case has been run** and has evidence. Every "Blocked" result is resolved, or Akthar has accepted it in writing.
3. **Every known gap G1–G24** has been re-tested and passes.
4. **All legal documents are live and public**: Terms, Privacy Policy, Refunds & cancellation, DPA & subprocessors and Cookie notice. Each has a version and an effective date, **no placeholders**, and every fact matching the product (LEG-07, LEG-09, LEG-10). Registered address, company number and ICO number to be added before launch if required (UK Companies Act trading disclosures). LEG-08 is a pre-launch check, not a P0 release blocker.
5. **Payments proven in Stripe test mode:** every tier and interval, trial, day-15 conversion, cancellation with no charge, founding months 1–6 at 50% and month 7 at full price, the 101st user at full price, upgrade and downgrade, retries, refund, dispute and webhook replay. The live proofs CHK-40–42 are done with Akthar.
6. **Deletion proven:** closure at access end, the login removed, backups gone within 7 days, and a restore test that doesn't bring data back.
7. **Isolation proven:** SEC-01–SEC-04 pass for accounts, shops and roles.
8. **Email authentication passes** (SPF, DKIM and DMARC aligned) for every email, and none links to marginos.online.
9. **Screenshot matrix complete** (RESP-01) with no fails. **Zero serious or critical axe issues**, and the keyboard and screen-reader journeys pass.
10. **The brand audit (BR-01) finds no "Margins 365", "MarginOS" or "MarginSeam"** shown to customers.
11. **The intuitiveness study (NAV-30/31) meets its targets**, or any misses have been fixed and re-tested.
12. **Every regression item (REG) passes**, or is marked "Replaced" by V-requirement.
13. **Suite SEO:** SEO-01 to SEO-29 and SEO-33 pass on production (SEO-30 to SEO-32 are post-launch checks logged for Akthar). No staging site is indexable.
14. **Suites CONS and ANL pass** (consent banner and analytics gating), and the v20.1 Cookie notice, Privacy Policy and DPA page are live with the analytics release.
15. **Phase 2 (K76, K77) has its own release gate:** every PCALC test and SEO-34 to SEO-36 pass, with zero open P0/P1 defects, before a calculator, landing page or article goes live.
16. **K80–K86:** suite MOB passes on a real iPhone (Safari, bar shown and hidden), Android phone and iPad; NAV-33–NAV-36, HELP-17–HELP-24, AUTH-21–AUTH-25, EML-22–EML-25 and OFF-17 pass; the K86 SES proof is attached.

17. **K88–K90:** HELP-33–HELP-37, CAN-14–CAN-25, CHK-43–CHK-46, EML-26 and EML-27 pass. A Stripe test-mode cancellation shows no upcoming invoice, and a test-clock run past trial end takes no charge (CAN-23). **Release is blocked until cancellation works.**
18. **v20.1 gap audit:** every GAP test for a P0 or P1 gap passes; P2 gaps are fixed or accepted in writing by Akthar.
19. **Release gate:** RG-1–RG-4 pass (spec 23.22), including every E2E test in Stripe test mode with SES receipts. No live-mode trial before this.

9. Sign-off checklist

#	Item	QA lead	Development lead	Akthar
1	All suites run, with evidence stored (link)	☐

	legal texts live			
12c	Phase 2: calculators pass PCALC (same results as the product); landing pages and articles pass SEO-34 to SEO-36	☐	☐	☐
12d	K80–K87 (incl. FAQ on Pricing and Help centre): pop-ups on phones, banner removed, instant top, Suggest a feature and Contact us reach info.marginos@gmail.com, forgot password end to end, SES proof attached	☐	☐	☐
12e	K88–K90: trial-start email and pop-up (only after the trial is confirmed); contact message “Thank you for contacting us, we aim to respond within 24 hours.”; cancellation cancels in Stripe (no upcoming invoice), pop-up, email, status on every device, Resubscribe, audit log	☐	☐	☐
12f	v20.1 gap audit: GAP-01–GAP-66 (P0 and P1 pass; P2 fixed or accepted)	☐	☐	☐
12g	Release gate RG-1–RG-4 and suite E2E (Stripe test mode, Dashboard checked, SES emails received)	☐	☐	☐
13	Release approved			☐

Only Akthar's sign-off on row 13 releases the build. Marketing gets nothing until it is built, working and tested.

10. Spec gaps and contradictions found while writing this prompt

Spec v20 (section 23) settled most earlier questions: founding places and annual handling, the Sample shop buttons, member permissions, removing shops, ownership transfer, where cancellation reasons are kept, the contact-form rules and onboarding. The points below are still open, or are risks QA must watch. Log each as a `SPEC-QUESTION` if it is still open when testing starts.

#	Gap or contradiction	Effect on testing
1	**The live build stores product data in the browser** (localStorage `marginos.*`), and has no server endpoints for uploads, shops, seats, cancellation, the portal, export or the contact form (G7, G8; spec finding F1). v20 23.0 requires the server to be the source of truth.	Most of SHOP, SEAT, LIM-08, LIM-15, CAN-07 and DEL are expected to fail until this is rebuilt. It is the biggest build risk.
2	**Resolved by K81 (banner removed).** Previously: the sticky banner stayed "From £39/mo" (K43, word for word) while the founding price is £19.50. That is lawful as a standard-price statement, but it is inconsistent with the founding line on Pricing.	PUB-15. Akthar to confirm the banner wording is kept.
3	**Grammar in an approved string:** "Your plan includes [n] seats" reads "1 seats" on Starter and Growth.	SEAT-02. A copy fix ("1 seat").
4	**Addressed by K84 (confirmation without the message text; needs Akthar's OK).** Previously: the copy to the visitor repeated their message to any address typed in. That can be used to send spam under the Margins365 domain (up to 3 an hour per address and 5 an hour per IP, so it can be spread across many IPs). It risks the SES account and how trusted margins365.com mail is.	HELP-09. Recommend sending the copy only to verified signed-in users, or leaving the message body out for signed-out senders. Needs Akthar's decision.
5	**info.marginos@gmail.com** keeps the old "marginos" name, is a personal Gmail, and is published in Terms v20 as the contact address. Google becomes a recipient of contact data, so it must be listed in the Privacy Policy and the DPA/subprocessor list.	DOM-01, LEG-10, HELP-15. Allowed under K65; recommend a margins365.com address later.
6	The trading name in the v20 legal documents is **Margins365**. Company type, country of registration, registered address, company number and ICO registration number have been removed for now. Registered address, company number and ICO number to be added before launch if required (UK Companies Act trading disclosures).	LEG-08 is a **pre-launch check, not a P0 release blocker**.
7	**Only Terms and Refunds & cancellation exist as v20 files** in `/workspace/v20/`. Privacy Policy, DPA & subprocessors and the Cookie notice v20 (named in K74) were not found yet.	LEG-01, LEG-10, LEG-11, LEG-30–33 can't pass until they are published.

#	Gap or contradiction	Effect on testing
8	**Cloudflare is in use** (the `__cf_bm` cookie). The v20 Cookie notice and DPA subprocessor list now include it; Privacy also lists Cloudflare as a recipient.	LEG-10, LEG-30: confirm the published documents still match the live cookies.
9	**The v19 tests replaced by v20** (L17, S36–S46, D13, the K42 "no founding" checks S3, S24, 10.1.11, 22.12.8 and 16.4.3, and the 3.2 FAQ answers about the Pro trial) must be marked Replaced, not reported as fails.	REG, TRL.
10	**marginos.online now 301-redirects keeping the path and query** (re-checked 11 Nov 2026, 14:27 Europe/London; www.marginos.online fails TLS), and K73 says the redirect stops when the domain is cancelled. Every old link will then break, and someone else could register the domain.	DOM-05, DOM-06. Recommend keeping it registered but parked.
11	**The Stripe statement descriptor** `LINK.COM* MARGINOS` may be controlled by Link or Managed Payments.	BR-06. Tag it `EXTERNAL-CONFIG` for Akthar.
12	**The webhook sets ended subscriptions to "free"** (G9), and the old founding-price fields equal the full prices (G11).	CHK-30, OFF-16.
13	**The account button falls back to the email** until a business name is saved (23.1). Akthar asked for the business name, not the email. First-run makes the business name required, so this case should be rare.	NAV-08. Low risk; noted for Akthar.
14	**Contact messages are kept 12 months**, both in the database and in the Gmail mailbox. Deleting them from Gmail is a manual step.	HELP-12. Needs a manual procedure, or the Privacy wording must reflect it.

Prepared by Business & Product for Akthar Uddin. Requirements and tests only: no code, no UI design, no changes to the site.
