Margins365 spec v20 — Developer change pack (K59–K86)

Status: APPROVED — Akthar Uddin, 11 November 2026, 13:36 Europe/London, with his follow-up decisions the same afternoon (founding offer 6 months; Sample shop buttons and full product architecture delegated to the Business & Product Agent). For: Design & Development. **Baseline:** FINAL v19 (K1–K58) and the 7 November 2026 Help centre and footer handoff, which K64 and K65 replace. **Companion:** `/workspace/v20/Margins365-Spec-v20.md` (full spec, section 23 holds the product architecture). Legal documents: `/workspace/v20/Margins365-*-v20.md`.

Requirements and acceptance criteria only: no code, no UI design. Formulas in spec 12.0–12.3 do not change. Prices and order limits do not change. Nothing here goes to Marketing until it is built and tested.

Will QA make the changes? No. Developers build everything in this pack. QA then tests the built site with `/workspace/Margins365-QA-Prompt-v20` and reports failures back to Development. See “Hand to QA when”.

Decision summary

ID	Decision	Replaces
K59	Brand is **Margins365**, one word, everywhere	K58 spelling
K60	Header: Home / Sample shop / Pricing. “Sample report” is renamed “Sample shop” everywhere	—
K61	Home “Start here” green area keeps three buttons; Compare plans and Sample shop swap places	—
K62	Every navigation opens at the top of the page	—
K63	Real URL routes: refresh keeps the page; deep links and back/forward work	—
K64	Footer: copyright line; old sentence removed; Help and Legal columns	7 Nov footer handoff
K65	New Help centre page with the Hard limits & billing FAQ and a Contact us form	7 Nov form rules
K66	Sample shop page buttons: new text; second button becomes a shop icon	K55 button text

ID	Decision	Replaces
K67	Signed-in header: no trial CTA, business-name account button and menu, Info and Control room	15.4 signed-in rules
K68	Shops/multi-shop and seats/multi-seat fully built	OD5, Q22, Q23 defaults
K69	The trial gives the tier the customer chose	K52 reverse trial
K70	Professional account profile (Info)	5 “Profile & sign-in”
K71	Optional cancellation reason in the cancel flow	—
K72	Founding offer: 50% off for 6 months for the first 100 paying users	K42 (in part)
K73	Move fully to margins365.com; remove every marginos.online reference	K58 cutover wording
K74	Legal documents published on the site (approved v20 texts)	7 Nov “sign in to view” idea
K75	SEO and discoverability for the public site (`Margins365-SEO-v20`)	Single-shell HTML, one title for every page
K76	Free public calculators (Etsy UK, Amazon UK, Shopify UK, ecommerce margin), sharing the product's calculation module	—
K77	Keyword landing pages and help articles (no competitor comparison page)	—
K78	Home H1 “Know your true profit and where it leaks”	“Stop guessing your e-commerce unit economics.”
K79	Consent-gated Plausible analytics; consent banner; Cookie notice, Privacy Policy and DPA page v20.1	K74 “essential only, no banner”
K80	Every pop-up works on a phone (fits the visible screen, scrolls inside, buttons always reachable, page behind locked); site-wide mobile check	—
K81	Remove the "14 days free. Cancel before day 14 and pay nothing. From £39/mo" banner everywhere	K43 banner

K82	Every page opens at the top instantly, with no animated scroll (fixes K62 on iPhone)	—
K83	Suggest a feature is emailed to info.marginos@gmail.com (and stored)	Q33 store-only default (S58)
K84	Contact us reaches info.marginos@gmail.com signed in and out; visitor gets a confirmation without the message text (*needs Akthar's OK*); in-page pop-up; spam limits	23.11 "copy of what they wrote"
K85	Forgot password works end to end; no browser-only fallbacks; reset link built on the server	—
K86	SES email set up and proven before release (verified domain, DKIM, MAIL FROM, production access, SPF, DMARC)	—

What the live site does today (checked 11 November 2026, live bundle)

- Brand shows “Margins 365” (with a space). No “Margins365” string.
- No page routing: refresh always returns to Home; pages don't scroll to the top on change.
- “Help centre” in the footer is text, not a link. No Help centre page and no contact form.
- The footer still shows “Margins 365. Plans from £39/month including VAT after trial. Cancel in Plan & billing — there is no email cancellation route.” There is no copyright line.
- No screen to add or switch shops and no invite flow. Tier limits for shops and seats exist only as configuration.
- A profile with name, business name and phone (all required) exists.
- Account and product state is kept in the browser (localStorage `marginos.*`). See finding F1 in spec 23.13.
- No analytics, advertising or tracking scripts found. Essential cookies: the httpOnly session cookie (`marginos_session`, 30 days) and Cloudflare’s `__cf_bm` security cookie (30 minutes).

Part A — Decisions K59–K74

K59 — Brand: Margins365, one word

Requirement. `PRODUCT_NAME` = **Margins365** (one word, capital M, no space). Every interface string, page title, meta tag, PDF, email (subject, body, From name), legal document, Stripe product name and Google consent screen uses it. “Margins 365” (with a space), MarginOS and MarginSeam do not appear in customer-facing text. Code identifiers (CSS `--mo-*`, cookie and storage key names, file names) may stay. **Acceptance.** A text search of the built site, emails, PDFs and legal pages finds no “Margins 365”, “MarginOS” or “MarginSeam”. Page titles read “Margins365 — …”. **v19 sections**

affected. Front matter, 2, 5.1, 6, 11, 12.9, 15.4, 17.3, 17.7, 20.4–20.5, 22, S73, K58.

K60 — Header navigation and the Sample shop rename

Requirement. The public header has three navigation buttons: **Home**, **Sample shop**, **Pricing**, plus Sign in and the primary action (23.1). The public page formerly called “Sample report” is now **Sample shop** at `/sample-shop`, with its heading “What a Margins365 diagnosis looks like” kept. Every link, button, heading, FAQ answer, email and document that said “Sample report” now says “Sample shop”. `/sample-report` redirects permanently to `/sample-shop`. **Acceptance.** Header shows exactly Home, Sample shop, Pricing in that order on every public page and device. No “Sample report” text remains. The old address redirects. **v19 sections affected.** 3.2, 7, 10.1, 15.2, 15.4, 17.5, 17.7, S31, S52, S61.

K61 — Home “Start here” area

Requirement. The green area at the bottom of Home is titled **Start here** and keeps three buttons. Swap the positions of **Compare plans** and **Sample shop**; the third button stays where it is. Signed out, the trial button keeps the label “Start 14-day free trial”. Signed in on a trial or paid plan it becomes **Go to Control room** (K67). **Acceptance.** Title “Start here”; three buttons; Sample shop and Compare plans have swapped; each opens its page at the top. **v19 sections affected.** 15.4, 17.7.

K62 — Open every page at the top

Requirement. Any click that opens a different page (header, footer, buttons, links in FAQ, emails landing on the site) shows the new page from the top. In-page anchors (for example “Compare plans” to the comparison table on Pricing) scroll to their target. Back/forward restore the previous position. **Acceptance.** From the bottom of every page, every link to another page lands at the top, on phone, iPad and desktop. **v19 sections affected.** 15.1, 15.2.

K63 — Real routes; refresh keeps the page

Requirement. Every public and signed-in screen has its own address (route map in 23.1). Refresh reloads the same screen and, signed in, the same shop. Deep links work signed out (public pages) and signed in (after sign-in, the user returns to the requested page). Back and forward work. Each page has its own title and canonical URL on margins365.com. Unknown addresses show a 404 page. **Acceptance.** Refresh on every route stays on that route. Pasting a signed-in link while signed out asks for sign-in, then opens that link. Back/forward move through visited pages. **v19 sections affected.** 10.1 #3, 11, 15.1.

K64 — Footer

Requirement. On every page:

- Copyright: **© 2026 Margins365. All rights reserved.** The year updates automatically each year.
- Remove in full, with no replacement: “Margins 365. Plans from £39/month including VAT after trial. Cancel in Plan & billing — there is no email cancellation route.”
- **Help** column: Help centre, Sign in (signed out) or Control room (signed in).
- **Legal** column: Terms, Privacy, Refunds & cancellation, DPA & subprocessors, Cookies. Each opens the published document in a new tab (K74).
- No Contact link (the form is in the Help centre). **Acceptance.** Exact copyright text; the old sentence is absent; every footer link works; legal links open in a new tab at the top of the document. **v19 sections affected.** 10.1, 15.4; replaces the 7 November footer handoff.

K65 — Help centre and Contact us form

Requirement. New public page `/help`, reachable from the footer and the account menu. The **Hard limits & billing** FAQ moves here from Pricing (Pricing keeps a one-line link “Questions about limits and billing? See the Help centre.”). The Contact us form has **Name, Phone number, Business name, Email, Country, Message**. Submissions go to **info.marginos@gmail.com**, a pop-up confirms success, and a copy is emailed to the visitor's address through SES. Full behaviour, validation, limits and spam protection: spec 23.11. **Acceptance.** HC-1 to HC-6 in spec 23.11. **v19 sections affected.** 3.2, 10.1, 15.4, Q33; replaces section 1 of the 7 November handoff (fields, notification and reply rules).

K66 — Sample shop page buttons

Requirement.

- **First button** (opening section, green): signed out **Start your own shop** → starts the 14-day trial journey (sign-up, then Choose a plan); signed in without a plan **Choose a plan**; signed in on a trial or paid plan **Go to Control room**.
- **Second button** (bottom of the first dashboard section): a **shop icon** button, at least 44 × 44 px, with the accessible name and tooltip **Open Sample Shop**. It opens the sample shop's Control room (`/app/sample`); signed out it asks the visitor to sign in or create an account first, then opens it.
- The header keeps “Start 14-day free trial” for signed-out visitors. **Why these words.** On a page now called “Sample shop”, two buttons both reading “Open Sample Shop” no longer say anything different from the page itself. “Start your own shop” says the next step after looking at an example: make your own. It is a secondary button, so it does not compete with the one primary label (K46). Signed-in users already have a shop, so for them the useful next step is their Control room. The icon keeps the second action compact while the accessible name keeps it clear for screen readers. **Acceptance.** Button text changes with sign-in state as above. The icon button has the accessible name “Open Sample Shop” and opens the sample Control room. **v19 sections affected.** 15.4, 17.7, S52, S61; replaces the K55 button text.

K67 — Signed-in header, account menu and Control room

Requirement. Spec 23.1. In short: signed-in users on a trial or paid plan never see “Start 14-day free trial”. The green top-right button shows the **business name** and opens the account menu. On Scale (trial or paid) the menu includes the **shop switcher**. The menu includes **Info** and **Control room**. The signed-in identity shows the business name, not the email. The Control room is one click from every signed-in page. **Acceptance.** IA-1 to IA-6 in spec 23.1. **v19 sections affected.** 5, 10.1, 15.4, 22.

K68 — Shops, multi-shop, seats and multi-seat

Requirement. Spec 23.2 (shops) and 23.3 (seats, roles, invites). Shops 1/1/1/3; seats 1/1/2/5; order limit account-wide on every plan; data separated per shop; owner-only billing, cancel, shops and team. **Acceptance.** SH-1 to SH-7 and ST-1 to ST-7. **v19 sections affected.** Open decisions (OD5, Q22, Q23 now decided), 3, 6, 8, 12.7, 17.3. Live today: not built.

K69 — The trial gives the chosen tier

Requirement. A Starter trial gives Starter, Growth gives Growth, Pro gives Pro, Scale gives Scale, each with its own order limit. This replaces the K52 reverse trial: no Pro-for-everyone trial, no Keep Pro, no “Every trial includes Pro features”, no lock-on-conversion. Changing plan during the trial is allowed (same end date, no new trial, no charge today). Checkout lead for every plan: “Your 14-day free trial of [Plan] starts today. We'll ask for a card now so your plan can continue after the trial. You pay nothing today. Unless you cancel, we will automatically charge £[amount] including VAT on [date] for your [monthly or annual] [Plan] plan. Cancel any time before [date] in Plan & billing — it takes one click. We'll email you a reminder before you're charged.” Full lifecycle: spec 23.9. **Acceptance.** TR-1 to TR-5. S17, S36–S46, L17 and D13 are replaced as listed in spec 12.11. **v19 sections affected.** 3, 3.1, 3.2, 6, 7, 10.1, 12.4A, 12.5, 12.5A, 12.5B, 12.10, 12.11, 12.12, 16.4, 16.5, 22.10.

K70 — Account profile (Info)

Requirement. Spec 23.4. Sign-up stays short; Info collects name, business name, country, email (required) and phone, business address, VAT number, website (optional), with currency and time zone. Phone becomes optional. **Acceptance.** IN-1 to IN-6. **v19 sections affected.** 5.

K71 — Cancellation reason

Requirement. Spec 23.10. Optional reason picker and free text on the single cancel confirmation screen. Never required, never a second step, never delays Confirm cancel. Stored for reporting; unlinked from the account at access end. **Acceptance.** CA-1 to CA-4. **v19 sections affected.** 12.5A.

K72 — Founding offer: 50% off for 6 months, first 100 paying users

Requirement.

- The first **100 paying accounts** get **50% off for their first 6 monthly payments**. From payment 7 the normal price applies.
- Founding monthly prices: **Starter £19.50, Growth £39.50, Pro £64.50, Scale £99.50** a month including VAT for 6 months, then £39 / £79 / £129 / £199.
- Annual plans: the same value is given as **25% off the first year** (half price for 6 of the 12 months): **£292.50, £592.50, £967.50, £1,492.50** for the first year, then £390 / £790 / £1,290 / £1,990. (Product decision: annual payments are yearly, so “6 months at half price” becomes 25% off the first annual payment.)
- **Counting.** A place is **reserved** when a trial starts through Checkout and **confirmed** when the first payment succeeds. A reservation is released if the trial is cancelled, the first payment finally fails or the first payment is refunded. Reserved + confirmed never exceeds 100. One place per account. The counter lives on the server.
- **Plan changes** during the 6 months keep 50% off the new plan until the 6 months end. Cancelling ends the offer; a later account does not get it again.
- **Honest display.** While places remain, Pricing and Checkout say: “Founding offer: 50% off your first 6 months — for the first 100 paying customers. [n] places left.” The number is the real server count. When it reaches zero the offer disappears everywhere automatically. No countdown timers, no invented scarcity, no reset.
- **Disclosures.** Checkout, the trial-started email, Plan & billing and the reminder show the founding amount, how many payments it lasts, the date the normal price starts and the normal amount. A “Founding price ends soon” email goes 14 days before the 6th month ends.
- **Stripe.** A 50% coupon lasting 6 monthly invoices for monthly plans; a 25% one-off coupon for annual plans; applied server-side only when a place is reserved. **Acceptance.** FO-1 Only 100 places can ever be confirmed, even with simultaneous Checkouts. FO-2 Payments 1–6 charge the founding amount; payment 7 the normal price. FO-3 Annual first year charges 75% of the annual price. FO-4 Released places return to the counter. FO-5 The displayed count equals the server count; the offer vanishes at zero. FO-6 All disclosures show founding amount, duration and normal price. FO-7 The ends-soon email is sent. **v19 sections affected.** 2, 3, 3.1, 3.2, 7, 10.1 #11, 12.5, 12.10, 12.11 (S3, S24), 16.4, 16.5, 22.12 #8; K42 is superseded for the new offer only (the old 25% offer stays removed).

K73 — Move fully to margins365.com

Requirement. margins365.com is the only domain. Remove every reference to marginos.online: links, canonical and Open Graph URLs, sitemap, emails (From, links, reply-to), Google OAuth origins and redirect URIs, Stripe success/cancel/portal/webhook URLs, SES sending identity, environment examples and documents. SES sends from a verified margins365.com identity with SPF, DKIM and DMARC passing (the 11 November check found the apex SPF and the SES domain verification still missing). Ask Stripe/Link to update the statement descriptor from “MARGINOS” to Margins365. **When marginos.online is cancelled, its redirect to margins365.com stops**, so old bookmarks, old emails and any link still pointing there will break; that is why every reference must be gone first. **Acceptance.** Text search of code, built site, emails and consoles finds no marginos.online. Test mail passes SPF/DKIM/DMARC. Google sign-in and Stripe returns work on margins365.com only. **v19 sections affected.** Front matter, OD3, 11, 16.5, 20.3–20.5, 22, S74, S75.

K74 — Legal documents on the site

Requirement.

- Publish the approved v20 texts: **Terms**, **Privacy Policy**, **Refunds & cancellation**, **DPA & subprocessors**, **Cookie notice**, at the `/legal/...` routes in 23.1, as web pages with a **Download PDF** link. Each shows its version (v20) and effective date.
- **Public:** readable without signing in (UK GDPR requires privacy information before data is collected; Terms must be available before purchase).
- **Linked from:** the footer Legal column, the sign-up screen, Stripe Checkout (terms and refund links in the Checkout page settings) and the Help centre. These links open in a new tab.
- **Consent:** sign-up shows “By creating an account you agree to the Terms and have read the Privacy Policy.” Checkout shows the Terms and Refunds & cancellation links. Store per account: document, version, time accepted. A material change to the Terms shows the new version at next sign-in for acceptance.
- The trading name in the documents is Margins365. Registered address, company number and ICO number to be added before launch if required (UK Companies Act trading disclosures).
- **Cookies:** the live site sets two essential cookies: `marginos_session` (30 days) and Cloudflare’s `__cf_bm` security cookie (30 minutes), and uses localStorage. No analytics or tracking was found, so the Cookie notice states essential-only (and lists Cloudflare) and there is no banner. Development confirms nothing non-essential is added; if anything is, a consent banner is needed first. Cloudflare is listed as a subprocessor in the DPA. **Updated by K79:** analytics (Plausible, cookieless) is added behind a consent banner, and the Cookie notice, Privacy Policy and DPA page move to v20.1. **Acceptance.** LG-1 Every document loads signed out, on every device, at its route and as a PDF. LG-2 Footer, sign-up, Checkout and Help centre links open the right document in a new tab. LG-3 Version and effective date shown. LG-4 Acceptance stored. LG-5 No placeholder text is published. **v19 sections affected.** 10.1 #3, 12.6, 15.4, 16.4, 20.4.

K75 — SEO and discoverability

Status. Approved by Akthar, 11 November 2026, 14:38 Europe/London. Full requirements: **`/workspace/v20/Margins365-SEO-v20.md`** (and `.pdf`). **Why.** The 11 November audit found the site is not search-ready: every address returns the same empty HTML shell with one title (“Margins 365 — margin leak diagnosis”), there are no `<a href>` links, robots.txt, sitemap.xml and unknown paths return Home with status 200, there is no canonical, Open Graph, structured data or manifest, www and non-www both serve the site, and mobile LCP is 2.9 s (target < 2.5 s). **Requirement (SEO spec Parts A–C).** Prerendered/server-rendered HTML for public pages (Home, Sample shop, Pricing, Help centre, five legal pages, 404); signed-in app `noindex`; the exact titles, meta descriptions, H1s, canonicals and robots in SEO spec 5.1; real `<a href>` navigation; robots.txt and XML sitemap; real 404 status; 301s to `https://margins365.com` (http, www, trailing slash, `/sample-report`, marginos.online path-preserving until cancelled) and HSTS; Open Graph/Twitter tags with a 1200 × 630 image; favicon set and web manifest; JSON-LD (Organization, WebSite, SoftwareApplication with GBP offers, FAQPage, BreadcrumbList; no invented ratings); `lang="en-GB"` and self-referencing hreflang; Core Web Vitals LCP

< 2.5 s, INP < 200 ms, CLS < 0.1; asset caching; Search Console and Bing verified by DNS with the sitemap submitted. No analytics or other non-essential cookies without the Cookie notice update and consent where required. **Related.** The calculators, landing pages and help articles, Home H1 and analytics are K76–K79 below. **The competitor comparison page was not approved and has been removed. Acceptance.** QA suite **SEO** (SEO-01 to SEO-32) in the QA Prompt v20. **v19 sections affected.** 15 (performance and accessibility), 22 (brand assets: OG image, favicons); v20 23.1 (route map).

K76 — Free public profit calculators

Status. Approved by Akthar, 11 November 2026, 14:38 Europe/London. **Build after the core v20 QA pass. Requirement.** Four public, no-sign-up calculators: `/etsy-profit-calculator-uk`, `/amazon-fee-calculator-uk`, `/shopify-profit-calculator`, `/ecommerce-profit-margin-calculator`. They **must call the product's own calculation module and fee/tax configuration** (12.0, 12.2, 12.3 rounding and target/break-even price, 12.7 validation, 16.2 presets with "last checked" dates, 16.3 VAT rates, ECB rates). Outputs: revenue, every fee line, return cost, contribution margin, true profit per order, net margin, verdict, break-even ROAS/ACOS, break-even and target price, optional monthly totals, Show the maths. Calculation runs in the browser; **entered values never leave the browser** or reach analytics. Inputs, outputs, behaviour and golden examples: spec 23.15. **Acceptance.** PC-1 to PC-6 (spec 23.15); QA suite **PCALC**. The golden examples were computed with the spec formulas (`/workspace/v20/src/calc_examples_v20.py`).

K77 — Keyword landing pages and help articles

Status. Approved by Akthar, 11 November 2026, 14:38 Europe/London. **Publish after the core v20 QA pass. Requirement.** `/profit-leak-checklist` and `/multi-channel-profit`, then the 10 help articles in SEO spec 15.2 under `/help/<topic>` at about 2 a month. Metadata from SEO spec 15.1, prerendered, in the sitemap, every fee/tax/product fact sourced and dated, tax content marked "not tax advice" and the VAT article checked by the accountant. **No competitor comparison page.** Spec 23.16. **Acceptance.** LP-1 to LP-3; QA SEO-34 to SEO-36.

K78 — Home H1

Status. Approved by Akthar, 11 November 2026, 14:38 Europe/London. **Requirement.** Home's only H1 reads **“Know your true profit and where it leaks”**, replacing “Stop guessing your e-commerce unit economics.”. The supporting sentence and the Product section headline (K55) stay. Spec 23.17. **Acceptance.** H1-1; QA SEO-33.

K79 — Consent-gated analytics and the consent banner

Status. Approved by Akthar, 11 November 2026, 14:38 Europe/London. **Requirement. Plausible Analytics** (EU-hosted, cookieless, no stored IP addresses) on public pages only, loaded **only after "Accept analytics"**. Banner with equal **Accept analytics** and **Reject**, no pre-ticks, close = reject,

Global Privacy Control = reject, choice stored as `m365_consent` for 12 months or until the notice changes, **Cookie settings** in the footer Legal column to change it. No analytics in the signed-in app, sign-in/reset pages or emails; events carry no personal data and no entered values. Publish the **v20.1** Cookie notice, Privacy Policy and DPA & subprocessors page in the same release. Spec 23.18. **Acceptance.** AN-1 to AN-6; QA suites **CONS** and **ANL**.

Part A (continued) — Decisions K80–K86: Akthar's iPhone test, 11 November 2026

Status. K80, K81, K82, K83 and K85 are fixes **Akthar asked for on 11 November 2026** after testing the live site on his iPhone. K84 and K86 are what it takes for his contact-form and email requests to work. **One item needs Akthar's OK before it's built:** within K84, the visitor gets a **confirmation without their message text**. That's a Business & Product security recommendation. Two small legal-wording follow-ups (K83, K84) also need his approval before the next legal version. Full requirements and acceptance criteria are in spec **23.19** (reproduced as B.19 below).

Live findings behind K80–K86 (checked 11 November 2026, 17:30 Europe/London)

Checked on the live site (bundle `index-DrtqBa1f.js`), with safe API probes (no real messages sent, no accounts created), DNS lookups, a phone-sized browser test (390 × 664) and the server code snapshot from 11 November 13:38.

#	Issue	What happens now (evidence)	Root cause	Broken live?
1	Free-trial pop-up can't scroll	At 390 × 664 the plans pop-up is **1,541 px tall**. Its top (Close button and the Starter to Pro tiles) sits **893 px above the screen**. Swiping scrolls the page behind it, not the pop-up. On iPhone Safari the bottom, with the **Start 14-day free trial** button, falls behind the browser toolbar, as in Akthar's screenshot.	Every pop-up uses one of two shared containers. Both are pinned to the full screen with **no maximum height and no scrolling inside**. The page behind isn't locked. The cookie banner sits on a **higher layer than pop-ups**, so on a first visit it can cover a pop-up's buttons.	**Yes.** Same fault in sign-in / sign-up / profile / reset, plans & trial, Clear sample data, Delete my shop data, and Cancel trial / subscription (which also holds the reason list)
2	Banner	Exact text: **"14 days free. Cancel before**	The K43 banner is still	Present on every

#	Issue	What happens now (evidence)	Root cause	Broken live?
		day 14 and pay nothing. From £39/mo". It's one component at the top of the public site frame, sticky with the header, so it shows on **every public page** (Home, Sample shop, Pricing, Help centre, legal pages), signed in or out. Dismissing it lasts only for that browser session. Header and banner together take **199 px of a 664 px phone screen**.	built in.	public page
3	Pages open at the bottom	A page change now updates the address and asks the browser to go to the top. But the stylesheet turns on **smooth scrolling for the whole page**, so the jump becomes an animation of about 1 second that starts from the old position. Trace from the bottom of Home: the new page starts at y ≈ 1,900–6,000 and animates upwards. iPhone Safari stops that animation when the new page changes height or when the user touches the screen, which leaves them at or near the bottom. With smooth scrolling switched off, the same clicks land at the top instantly.	Smooth scrolling applied to page changes, and the scroll fires before the new page has rendered.	**Yes on iPhone** (Akthar saw it; the animation was reproduced in a phone emulator)
4	Suggest a feature	Signed in only. The text goes to the server (`/api/feature-suggestions`), which **saves it in the database** and replies "saved for review". **No email is sent** (server code). Signed out, the server replies 401 "Sign in first".	Built to the old Q33 default (store only).	**Not sent to info.marginos@gmail.com**
5	Contact us	The same Help centre form is used signed in and signed out (signed in, the fields are pre-filled). It posts name, phone, business name, email, country and message to `/api/contact`. The page doesn't send the recipient, which is right, but it doesn't include the account details either. There's **no honeypot and no minimum fill time**. Success shows the **browser's own alert box**. The limit is 4,000 characters against	Delivery depends on the SES setup (row 7).	**Delivery unproven**

#	Issue	What happens now (evidence)	Root cause	Broken live?
		the spec's 5,000. Validation works (empty fields and an over-long message are refused with 400). Who the server sends to **couldn't be confirmed without sending a real message**, so that wasn't done. The request works: a made-up @example.com address gets the neutral 200 response, a bad address gets 400, and a bad reset token gets 400 "invalid or expired". **But:** (a) if the server fails, for example because SES refuses the email (HTTP 502), the page **quietly switches to a built-in demo routine** that keeps a fake token in the browser and still says "If an account exists, we've sent a reset link." The user is told it worked when no email went out. (b) The server builds the reset link from an **"origin" value the browser sends** (server code). Anyone could ask for a reset for someone else's email with their own website as the origin, so the real reset email would carry a link to their site (**password-reset link poisoning, P0 security**; Development to confirm against current code). (c) `/reset-password` returns **404**; the link uses `/?reset=`. (d) Email sign-in and Google sign-in also fall back to a **browser-only "signed in"** state on network errors. (e) Server email text still says “Margins 365” and invites replies to an address that has no inbox.		
6	Forgot password		Demo fallbacks left in the production build; the server trusts a browser-supplied origin; SES status unknown.	**Partly working, not proven end to end**
7	Email (SES) setup	DNS (17:30): `mail.margins365.com` has MX `feedback-smtp.eu-north-1.amazonses.com` and SPF `include:amazonses.com`. That means a custom MAIL FROM is configured, so a margins365.com identity exists in SES eu-north-1. `_dmarc` is `v=DMARC1; p=none;` with no reporting address. The apex has **no SPF and no MX**. `_amazonses` TXT is absent. `/api/health` reports `sesConfigured: true`,	Can't be confirmed from outside.	**Unknown. Development must check the SES console (K86)**

#	Issue	What happens now (evidence)	Root cause	Broken live?
		region eu-north-1. **Correction to the earlier note:** `_amazonses` is the old verification method. SES now verifies a domain with 3 DKIM CNAME records whose names are random and can't be listed from outside, so their absence **doesn't prove** the domain is unverified. **Sandbox status can't be seen from outside either.** If SES is still in the sandbox, it only delivers to verified addresses: the notification to info.marginos@gmail.com could arrive while every reset email, verification email and visitor confirmation to a real customer fails.		

Also found (existing rules; no new decision needed):

- **D-1 (P0) Founding prices are rounded to whole pounds** in the plans pop-up: £19.50 shows as £20, £39.50 as £40, £64.50 as £65 and £99.50 as £100. The annual founding prices are rounded the same way. Akthar's screenshot shows "£100/month" and "we will automatically charge £40". The trial disclosure therefore states a charge of **£40 when the real charge is £39.50**. This breaks K72 / 12.5C and the pre-contract disclosure (12.5A). Show pence wherever a price isn't a whole pound.
- **D-2** The cookie banner sits above pop-ups and has no bottom safe-area padding (K80 fixes it).
- **D-3** The viewport tag has no `viewport-fit=cover`, so the site's safe-area padding does nothing today. That's harmless now, but it matters once anything is pinned to the bottom (K80).

K80 — Every pop-up works on a phone, plus a site-wide mobile check

Requirement. Every pop-up, sheet, drawer and confirmation (sign-in and reset, plans and trial, Clear sample data, Delete my shop data, Cancel with reason, contact success, account menu, shop switcher, team, phone menu, cookie banner) must:

- fit the **visible** screen, on iPhone Safari with the address bar shown or hidden and with the keyboard open;
- scroll inside, with the title and Close always visible;
- keep its buttons reachable (never behind the browser toolbar, home indicator or cookie banner), with safe-area spacing at the bottom;
- lock the page behind it and restore the position on close;
- sit above every other layer;
- trap focus and return it on close.

A site-wide mobile check runs on every page and screen at 320–430 px, on iPad, iPhone Safari,

Android Chrome and Samsung Internet. Spec 23.19.1. **Acceptance.** MOB-1 to MOB-6; QA suite **MOB**.

K81 — Remove the "14 days free" banner

Requirement. Remove the sticky banner **"14 days free. Cancel before day 14 and pay nothing. From £39/mo"** from every page and device, signed in and out, together with its dismiss button and saved setting. There's no replacement. This supersedes the K43 banner. The trial terms on Pricing, in the plans pop-up, at Checkout and in Plan & billing stay. Spec 23.19.2. **Acceptance.** BN-1 to BN-3; QA MOB-12, PUB-15 (rewritten).

K82 — Every page opens at the top, instantly

Requirement. Every change of page lands at the very top **with no animated scroll**, from any entry point, on every device. The cause on the live site is smooth scrolling applied to the whole page. Smooth scrolling is allowed only for in-page jumps. Late-loading content must not push the page down. Back and forward may restore the earlier position. This fixes K62 on iPhone. Spec 23.19.3. **Acceptance.** NV-1 to NV-4; QA NAV-33 to NAV-36.

K83 — Suggest a feature is emailed to info.marginos@gmail.com

Requirement. Suggest a feature stays signed in only. The server stores each suggestion, then emails it through SES to **info.marginos@gmail.com**. The email has the account email, business name, plan and status, role, number of shops and the time, with Reply-To set to the submitter. The success message is shown in the page. If sending fails, the server alerts and retries. Limits: 5 per hour and 20 per day per account. The FAQ wording is updated. This replaces the Q33 store-only default (S58). Spec 23.19.4. **Acceptance.** FS-1 to FS-5; QA HELP-17 to HELP-19.

K84 — Contact us reaches info.marginos@gmail.com, signed in and signed out

Requirement.

- One form and one server route. The server always sends to **info.marginos@gmail.com**; the page never chooses the recipient. Reply-To is the visitor.
- Signed-in sends add the account context from the session.
- The visitor gets a **confirmation without their message text**. *(Needs Akthar's OK.)*
- The success pop-up is shown in the page, not the browser alert box, and only after the message is stored.
- Failures: alert and retry.
- Spam protection: a honeypot, a 3-second minimum fill time, 5 per IP and 3 per email per hour in shared storage, the real client IP, and header-injection checks.
- Message length 10–5,000 characters.

Spec 23.19.5 (adds to 23.11). **Acceptance.** HC-7 to HC-12; QA HELP-20 to HELP-24 (HELP-06 and

HELP-08 updated).

K85 — Forgot password works end to end

Requirement.

- No browser-only fallback for any account action. Server errors show a clear "couldn't reach Margins365" message.
- The reset link is built on the server from `https://margins365.com` only, never from a browser-supplied origin. This closes a reset-link poisoning risk.
- The link opens a real `/reset-password` page, which is 404 today.
- SES failures alert and retry while the user still sees the neutral message.
- The K57 / Q34 limits and expiry are unchanged.
- Emails use "Margins365" and don't invite replies.

Spec 23.19.6. **Acceptance.** PR-1 to PR-6; QA AUTH-21 to AUTH-25.

K86 — Email sending set up and proven before release

Requirement.

- The SES eu-north-1 margins365.com identity is **Verified**, with Easy DKIM and MAIL FROM **Successful**.
- **Production access** (out of the sandbox).
- Bounce and complaint handling.
- An apex SPF record, and DMARC reporting moving later to quarantine.
- From is on margins365.com, with Reply-To set on every email (the domain has no inbox).
- Before QA, each email is proven to pass SPF, DKIM and DMARC at Gmail, Outlook and iCloud, and to reach an unverified external address.

This blocks release of K83–K85 and every email. Spec 23.19.7. **Acceptance.** ES-1 to ES-5; QA EML-22 to EML-25.

D-1 (defect against K72, P0). Founding prices must show pence: £19.50, £39.50, £64.50, £99.50, £292.50, £592.50, £967.50, £1,492.50, in the plans pop-up, on cards, at Checkout, in Plan & billing and in emails. The trial disclosure must state the exact amount that will be charged. QA OFF-17.

Build order

1. K73 domain and K59 brand (configuration; unblocks emails and sign-in).
2. K63 routes and K62 scroll (every other change depends on addresses).
3. Server-side data store per shop (finding F1), then K68 shops and seats.
4. K70 Info and K67 account menu and identity.

5. K69 trial tier, then K72 founding offer (Stripe test mode).
6. K71 cancellation reason.
7. K60, K61, K66 navigation, Home and Sample shop page.
8. K64 footer, K65 Help centre and form (SES).
9. K74 legal pages, links and acceptance records.
10. K75 SEO and K78 Home H1: prerendering and head tags alongside K63 routes; robots.txt, sitemap, redirects, OG image, icons and JSON-LD; then speed and caching; Search Console and Bing last, on production.
11. K79 consent banner first, then Plausible analytics behind it, with the v20.1 Cookie notice, Privacy Policy and DPA page published in the same release.

K80–K86 (Akthar's iPhone test), slotted into the order above: K86 SES setup and production access go **with step 1** (every email depends on it). K82 scroll fix goes with step 2. K80 pop-ups, site-wide mobile check and K81 banner removal go with step 7. K85 forgot password goes with step 4. K83 and K84 go with step 8. Fix D-1 (pence in founding prices) goes with step 5.

Phase 2 (after the core v20 QA pass):

12. K76 calculators on the shared calculation module; QA suite PCALC before they go live.
13. K77 landing pages, then help articles at about 2 a month; SEO checks per page.

Hand to QA when

All of these are true:

- Every K59–K75, K78 and K79 item is built on a staging site at margins365.com (or a staging subdomain of it).
- Developers have run their own checks against each acceptance list and the spec 12.11 and 12.12 tables.
- Stripe test mode has all prices, trials and both founding coupons; SES sends from margins365.com and passes SPF/DKIM/DMARC.
- K80–K86 and fix D-1 are built. The K86 proof is attached: SES console screenshots (identity Verified, DKIM and MAIL FROM Successful, production access) and passing headers for each email at Gmail, Outlook and iCloud.
- Registered address, company number and ICO number to be added before launch if required (UK Companies Act trading disclosures).

K76 and K77 (Phase 2) get their own QA pass (suites PCALC and SEO-34 to SEO-36) before they go live.

Then QA runs `/workspace/Margins365-QA-Prompt-v20` and reports pass/fail with evidence. QA does not change code; failures go back to Development, then QA re-tests. Nothing goes to Marketing until QA passes.

Part B — Product architecture (spec section 23, reproduced; B.n = spec 23.n)

Approved by Akthar Uddin, 11 November 2026 (Europe/London). Akthar asked for the product to be designed as a whole working product, not only a list of changes. Where his messages left gaps, the Business & Product Agent made the product decisions in this section under that instruction. These are requirements, not UI design: Design decides how screens look; this section fixes what the product does. Formulas in 12.0–12.3 are unchanged. K numbers refer to Appendix B.

B.0 Shared rules for every area

- **Server is the source of truth.** Plan, entitlement, role, shop, seat, founding-offer and trial state come from the server. The browser never decides access. Product data (orders, costs, ads, scenarios, results) is stored server-side per shop. Browser storage holds only UI preferences and a non-sensitive cache that is cleared on sign-out and at account closure (see 23.13, finding F1).
- **Every screen has an address (K63).** Refresh, back, forward and shared links reopen the same screen. Every navigation opens at the top of the new page (K62). Going back restores the previous scroll position, which is normal browser behaviour.
- **Time.** Dates and times shown to customers use the account time zone and name it. Stored times are UTC.
- **Words.** The product name is `PRODUCT_NAME` = **Margins365** (K59). Plan names are Starter, Growth, Pro and Scale.
- **Accessibility and devices.** Everything in this section meets 15.1–15.5 (WCAG 2.2 AA, 44 px targets, phone, iPad portrait and landscape, desktop).
- **Audit events.** Owner actions that change billing, shops, seats, roles or the account write a privacy-safe audit event: type, time, account ID, actor user ID and plan. No message bodies, no card data.

B.1 Signed-in information architecture and account menu

Route map (K63). Public: `/` Home, `/sample-shop` Sample shop, `/pricing` Pricing, `/help` Help centre, `/sign-in`, `/reset-password`, `/legal/terms`, `/legal/privacy`, `/legal/refunds-and-cancellation`, `/legal/dpa`, `/legal/cookies`. Signed in: `/app` Control room (current shop), `/app/upload`, `/app/products`, `/app/leaks`, `/app/calculators`, `/app/scenarios`, `/app/costs`, `/app/shops`, `/app/team`, `/account/info`, `/account/billing`, `/account/data`, `/app/sample` (sample shop Control room), `/invite/:token`, `/welcome` (first-run). The current shop is part of the address (for example `?shop=<id>` or `/app/s/<shopId>/…`; Development chooses the form) so a refresh keeps the same shop. Unknown routes show a helpful 404 with links to Home and, when signed in, the Control room.

Header, signed out. Logo (links Home), **Home**, **Sample shop**, **Pricing** (K60), **Sign in** (quiet), primary **Start 14-day free trial** (K46).

Header, signed in with no trial or plan yet. Home, Sample shop, Pricing, primary **Choose a plan**, and the account button.

Header, signed in on a trial or paid plan. Home, Sample shop, Pricing; no “Start 14-day free trial” anywhere on any page (K67); the green top-right **account button** labelled with the **business name** (K67). Until a business name is saved it shows the user's first name, then the email as last fallback. Long names truncate with the full name available to screen readers and on focus.

Account menu (opens from the account button; keyboard and screen-reader operable; closes on Escape or outside tap):

Item	Who sees it	Goes to
Business name, signed-in person's name and email, role badge (Owner or Member), plan badge (for example “Growth · Trial ends 25 Nov”)	Everyone	—
Shop switcher (list of shops, current one ticked, **Add shop** if allowed)	Scale (trial or paid)	Switches the current shop; Add shop goes to `/app/shops/new`
Info	Everyone	`/account/info`
Control room	Everyone	`/app` for the current shop
Shops	Owner	`/app/shops`
Team	Owner on Pro or Scale; members see read-only	`/app/team`
Plan & billing	Owner	`/account/billing`
Data & privacy	Owner; members see their own export only	`/account/data`
Help centre	Everyone	`/help`
Sign out	Everyone	Signs out this device

On Starter, Growth and Pro the shop name shows in the Control room header with **Rename** for the owner; there is no switcher because there is one shop.

Settings sections. The three Settings sections (5) become **Info** (business profile and sign-in), **Plan & billing** and **Data & privacy**. Info replaces “Profile & sign-in”.

Control room in one click (K67). From any signed-in page the Control room is one click away: via the account menu and via the logo when signed in (logo goes to `/app` when signed in, Home when

signed out).

Acceptance. IA-1 Every route above loads directly, survives refresh and back/forward. IA-2 Signed-in trial or paid users see no “Start 14-day free trial” on any page, including public pages, banners and emails. IA-3 The account button shows the business name; it falls back to first name then email only until a business name is saved. IA-4 Menu items match the table per role and plan; hidden items are also refused by the server. IA-5 Control room is reachable in one click from every signed-in page. IA-6 Every navigation opens at the top.

B.2 Shops and multi-shop (K68)

Entity. Shop: id, account, name (1–60 characters, unique in the account), platforms enabled (within tier slots), currency, created, status `active` or `deleting`. Every order, cost, ad, overhead, saved dataset, scenario, result and upload belongs to exactly one shop. Settings that are per account: plan, billing, team, time zone. Settings that are per shop: platforms, currency, tax settings, target margin, FX settings.

Tier limits. Starter 1, Growth 1, Pro 1, Scale up to 3 (trial or paid). The monthly unique-order limit is **account-wide** on every plan (one bucket across all shops). Platform slots apply per shop (Starter 1, Growth up to 2, Pro and Scale all 3, while TikTok is coming soon).

Flows.

1. **First shop.** Created in first-run (23.5): name and platform. Required before upload.
2. **Add shop (Scale, owner).** Account menu → Add shop, or Shops → Add shop → name, platforms → Create → the new shop opens empty with its own first-run upload prompt. At the limit the button is replaced by “Scale includes up to 3 shops” (no upgrade beyond Scale).
3. **Add shop on Starter, Growth or Pro (owner).** The Add shop action is shown and opens an upgrade explainer: “Add up to 3 shops on Scale (£199/mo).” It never creates a second shop below Scale.
4. **Rename (owner).** Inline; takes effect everywhere at once.
5. **Switch (Scale, everyone).** From the account-button switcher or Shops. Switching changes the current shop in the address, keeps the same page type (for example Leaks → Leaks), and opens at the top.
6. **Remove (owner, Scale, when more than one shop).** Shops → Remove → confirmation states the shop name, the item counts that will be deleted and “This can't be undone”; the owner types the shop name to confirm. The shop's product data is deleted (12.6 scope, backups within 7 days). Order usage already counted this billing month is **not** refunded. The last remaining shop cannot be removed; Start fresh (17.3) empties it instead.
7. **Combined view (Scale).** The Control room offers “All shops” as a read-only combined summary: true profit, revenue and leak £ per shop side by side and in total. The Health Score stays per shop (it is not averaged), so formulas are unchanged.

Downgrade from Scale. Applies at renewal (Q27). Before it applies, the owner chooses which one shop stays active. Other shops become **locked** (kept, not visible, not uploadable) and unlock on

upgrade. If the owner does not choose, the oldest shop stays active. Locked shops are deleted only when access ends (K39).

Errors and edge cases. Duplicate name → inline error. Upload while a shop is being removed → refused with a clear message. A member removed mid-session loses access on next request. Two owners' tabs removing the same shop → second gets “This shop has already been removed”.

Acceptance. SH-1 Starter/Growth/Pro cannot create a second shop by any route (UI or API). SH-2 Scale can create, rename, switch and remove up to 3 shops. SH-3 Data never appears in another shop (orders, costs, results, exports, PDF, search). SH-4 The order limit is counted once across all shops; re-uploading the same orders to the same shop does not add usage. SH-5 Removing a shop deletes its data and keeps usage; the last shop cannot be removed. SH-6 Switching survives refresh. SH-7 Scale downgrade locks, not deletes, extra shops; upgrade restores them.

B.3 Seats, roles and invites (K68)

Entities. Membership: user, account, role `owner` or `member`, status `active`, `locked` (over the seat limit after a downgrade) or `removed`. Invite: email, invited by, created, expires (7 days), status `pending`, `accepted`, `expired`, `revoked`. Exactly one owner per account.

Seat limits. Starter 1, Growth 1, Pro 2, Scale 5 (trial or paid). Seats used = active members including the owner + pending invites.

Permissions matrix.

Action	Owner	Member
View Control room, products, leaks, calculators, scenarios in every shop	Yes	Yes
Upload, review import, edit costs, ads and overheads	Yes	Yes
Create and edit saved datasets and scenarios; download the PDF (tiers that include it)	Yes	Yes
Download my data (CSV) for the account's shops	Yes	Yes
Add, rename or remove shops	Yes	No
Invite, revoke invites, remove members	Yes	No
Edit business Info (business name, country, VAT number, address)	Yes	View only
Edit own name, phone, password, Google link	Yes	Yes (own

Action	Owner	Member
		only)
Plan & billing: change plan, payment method, invoices	Yes	No
Cancel trial or subscription	Yes	No (K50)
Start fresh, Clear sample data	Yes	No
Transfer ownership	Not in v20 (see below)	No

Invite flow. Team → Invite → email → Send. The server checks the seat limit, the email is not already a member, and the inviter is the owner. SES sends “[Business name] invited you to Margins365” with an Accept button linking to `/invite/:token`. The invitee signs in or creates an account (Google or email) **with the same email**; the email must be verified. Accept → membership `active` → lands in the Control room of the current shop. Wrong email signed in → “This invite is for a different email. Sign out and use [masked email].” Expired or revoked → “This invite is no longer valid. Ask the account owner for a new one.” A person can belong to one account at a time in v20; inviting someone who already belongs to another account shows “This person already uses Margins365 with another business.”

At the limit. Invite is disabled with “Your plan includes [n] seats. Pro includes 2, Scale includes 5.” and, for Starter/Growth, an upgrade link.

Remove a member (owner). Confirmation → membership `removed`, sessions ended at once, an email “You no longer have access to [Business name] on Margins365”. Their uploads and edits stay with the account.

Downgrade below current seats. At renewal the owner chooses who stays; others become `locked` (cannot sign in to this account; told why on sign-in) until an upgrade. If no choice, the most recently added are locked first.

Ownership transfer is not offered in v20; the Help centre explains that the owner must keep control of billing. (Product decision: it touches billing identity and cancellation rights and is not needed for launch.)

Account closure. When the owner's cancellation reaches access end, every membership ends with the account (K51). Members get the same dated warning email when the owner confirms cancel.

Acceptance. ST-1 Seat limits enforced on the server, counting pending invites. ST-2 Invite emails arrive via SES from the margins365.com identity; tokens are single use and expire in 7 days. ST-3 Accept requires a verified sign-in with the invited email. ST-4 Members cannot reach owner actions by UI or API (403). ST-5 Removal ends sessions immediately. ST-6 Downgrade locks, not deletes; upgrade

restores. ST-7 Members never see “Cancel subscription”.

B.4 Account profile — Info (K70)

Sign-up stays short. Create account asks only: email and password (or Continue with Google), and acceptance of the Terms with a link to the Privacy Policy (K74). Everything else is completed in first-run (23.5) and kept in Info.

Info fields.

Field	Required?	Why (UK GDPR data minimisation)
Your name	Required	Identify the person signed in and on the team
Business name	Required	Account identity, header button, invoices context, invites
Country (business location)	Required	Tax and VAT handling, home currency default, legal terms that apply
Email (sign-in)	Required	Sign-in, verification, account emails. Changing it needs re-verification
Phone number	Optional	Only to reach the owner about the account if email fails. Never used for marketing
Business address	Optional	Shown on the owner's own records; invoices come from Link
VAT number	Optional	Reference for the customer's own records
Website or main shop URL	Optional	Context for support
Home currency and time zone	Required (defaults from country and browser)	Calculations and dates
Linked Google account, password, sign out of all devices	—	Sign-in management (existing 5 / 5.1 rules)

The live build currently requires phone; v20 makes it optional (minimisation). Validation: name and business name 1–100 characters; phone in international format; VAT number free text up to 20 characters; country from a list. Owners edit business fields; members edit their own name, phone and sign-in only. Changes save with a visible “Saved” confirmation and survive refresh. The data is

deleted with the account (12.6).

Acceptance. IN-1 Sign-up asks only email/password or Google plus Terms acceptance. IN-2 First-run cannot finish without name, business name and country. IN-3 Optional fields can be left empty. IN-4 Business name immediately updates the account button. IN-5 Email change requires verification before it takes effect. IN-6 Members cannot edit business fields (UI or API).

B.5 Onboarding and first run

Steps (each its own route, resumable after refresh or sign-out):

1. **Verify email** (email sign-ups; Google verified counts, 5).
2. **About your business** (`/welcome`): your name, business name, country. Continue.
3. **Choose a plan** (if the person arrived without one): plan cards with monthly/annual toggle, the founding-offer line while places remain (K72) → Stripe Checkout (12.5A disclosure). Coming back from Checkout lands on step 4. Cancelled Checkout returns to step 3 with “No card was charged.”
4. **Add your first shop**: shop name and platform(s) within the plan's slots.
5. **Upload**: platform file guidance from 17.5 for the chosen platform(s); upload; review import.
6. **Add costs**: product CSV template or type in.
7. **First results**: Control room with the highest-£ fix first (10.1 #5).

The sample shop is always available from the Control room header and from the Sample shop page; it never consumes allowance and clears under 17 rules. A progress indicator shows steps 4–7 until a first real upload succeeds; it can be dismissed.

Edge cases. Leaving mid-way resumes at the first incomplete step. A member joining by invite skips steps 3–4 (the account already has them) and only completes their own name. A trial whose Checkout fails or is abandoned has no subscription; the person stays “signed in, no plan” (23.1 header).

Acceptance. ON-1 A new user can go from sign-up to first results without help on phone, iPad and desktop. ON-2 Refresh at any step resumes that step. ON-3 Abandoned Checkout charges nothing and returns to Choose a plan. ON-4 Invited members skip plan and shop steps.

B.6 Control room

What it is. The signed-in workspace for the current shop: `/app`. Order of content (10.1 #5): highest-£ ranked fix, top three leaks with £ monthly impact, Health Score with band and confidence, true profit and net margin, products with verdicts, then detail (calculators, scenarios, costs, uploads). Usage counter (“1,240 of 2,000 orders this billing month”) and trial or founding-price status sit in a quiet strip.

States. Empty (no uploads): “Upload your first file” with platform guidance and a link to the sample shop. Sample: labelled Sample data everywhere. Importing: progress and the ability to keep working. Results: as above. Over 80%: notice naming the next plan. At limit: existing results stay; uploads blocked with the 12.4 message. Locked features (after a downgrade): shown with the plan that

restores them. Past due: persistent banner with Update card and the deletion warning (12.5). Cancelled: banner with access-end and deletion date and Download my data.

Scale “All shops” view as in 23.2.

Acceptance. CR-1 One click from any signed-in page. CR-2 Each state above renders as described. CR-3 Highest-£ fix leads on every device. CR-4 Sample data is labelled and never counted.

B.7 Upload and import

Existing rules stay (6, 12.4, 12.7, 16.1, 17). v20 adds: uploads go to the **current shop**, shown by name on the upload screen; the file picker accepts only the shop's enabled platforms; usage is checked account-wide before import; members can upload; a blocked upload names the shop, the overage and the Upgrade route (owner) or “Ask the account owner to upgrade” (member). Errors: wrong file type, missing required columns, empty file, file too large (Q10 defaults), unknown platform (TikTok until S47), duplicate-only re-upload (“No new orders — nothing counted”).

Acceptance. UP-1 Upload lands in the current shop only. UP-2 Account-wide limit and atomic block apply. UP-3 Members see the member version of the blocked message. UP-4 Raw files deleted in every outcome (10.2 #4).

B.8 Plan & billing (owner only)

Shows: plan, interval, status (trial / active / past due / cancelling), next charge date and amount (including the founding price and the date it ends, K72), usage, shops and seats used, invoices (from Link), payment method (Stripe-hosted update), Change plan, and **Cancel trial** or **Cancel subscription** (12.5A).

Change plan. Upgrade: immediate, prorated (paid) or immediate with no charge today (trial, K69). Downgrade: at renewal (paid); during a trial it applies immediately to features and to the day-15 charge, and if usage already exceeds the lower limit, new uploads are blocked as in 12.4. Interval change at renewal. Downgrades that exceed new shop or seat limits ask the owner to choose what stays active (23.2, 23.3).

Members opening `/account/billing` see “Only the account owner can manage billing.”

Acceptance. PB-1 Owner-only by UI and API. PB-2 Amounts match Stripe, including founding prices. PB-3 Upgrade/downgrade timing as above. PB-4 Cancel action visible without hunting.

B.9 Trial lifecycle (K69, K72)

States: `none` → `checkout_open` → `trialing` (day 1–14) → `active` (day 15 charge succeeded) or `past_due` (charge failed; retries up to 14 days) or `cancel_at_period_end` (owner cancelled; access to the original trial end) → `ended` (closed and wiped). One trial per account; per-card prevention where Stripe supports it (recommended default).

Rules. The trial runs on the plan the customer chose (K69): Starter trial = Starter features and 500 orders; Growth = Growth and 2,000; Pro = Pro and 5,000; Scale = Scale and 15,000. Changing plan during the trial keeps the same trial end, creates no new trial and charges nothing today. Day 15 charges the chosen plan's price, or the founding price if the account holds a founding place (K72).

Emails: trial started (plan, amount, first charge date, founding price and end date if applicable, how to cancel in Plan & billing); reminder 3 days before the end (default, configurable) with the same facts and a link to Plan & billing; first payment receipt (Link); payment failed; cancellation confirmation.

In-app trial banner (signed in): “You're on your [Plan] free trial until [date]. Your first payment of £[amount] is on [date]. Cancel any time in Plan & billing.” For founding accounts: “£[founding amount] a month for 6 months, then £[full amount].”

Acceptance. TR-1 Each tier's trial grants exactly that tier. TR-2 Day 15 charges the displayed amount once. TR-3 Plan change during trial keeps the end date and charges nothing today. TR-4 Cancelled trials are never charged. TR-5 Reminder content as above.

B.10 Cancellation (K50, K51, K71)

Flow (owner, Plan & billing): Cancel trial / Cancel subscription → **one** confirmation screen with: the 12.5A wording (access end, closure and deletion date, Download my data), an **optional** “Why are you cancelling?” picker (Too expensive; Not using it enough; Missing a feature I need; Hard to use; My data or files didn't work; Switching to another tool; Business closed or paused; Other) and an optional free-text box (up to 500 characters), then **Confirm cancel** and **Go back**. The reason is never required; Confirm cancel works with it empty; there is no second step and no retention offer.

After confirm: in-app confirmation and email (12.5A); members receive the dated warning; the reason is stored (23.13 retention).

Undo: “Keep my plan” in Plan & billing until access end if Stripe still shows it active (12.5A).

Cancellation outside the product. Link's own subscription tools may let a customer cancel. The webhook (12.10) treats any provider-side cancellation the same way: schedule closure and deletion at the period end, send the same confirmation email.

Acceptance. CA-1 Cancel completes with the reason empty in one confirmation. CA-2 Reason options and text are stored when given. CA-3 No email or phone route. CA-4 Provider-side cancel triggers the same schedule and email.

B.11 Help centre and support (K65)

Page `/help`, public. Contents: search-free list of help topics; the **Hard limits & billing** FAQ moved from Pricing (3.2 copy); short answers for sign-in and password reset, shops and seats, uploads and file types, cancelling (Plan & billing only), data and deletion; links to the legal documents; the **Contact us** form.

Contact form fields: Name (required), Phone number (optional), Business name (optional), Email (required), Country (required, list), Message (required, 10–5,000 characters). Signed in: name, business name, email and country prefill and stay editable. A short notice: “We use these details to answer your message. Don't include passwords or card details. See our Privacy Policy.” A hidden honeypot field and a minimum fill time protect against bots; no third-party captcha. Limits: 5 submissions per IP per hour and 3 per email per hour (configurable).

On submit: server validates → stores the message → sends a notification to **info.marginos@gmail.com** through SES (subject “Margins365 contact: [Name] — [Business name]”, all fields, reply-to set to the visitor's email) → sends a **copy** to the visitor's email (“We've received your message” + a copy of what they wrote; no promise of a reply time). Then a **pop-up confirmation**: “Thanks, [Name]. Your message has been sent. We've emailed a copy to [email].” The pop-up has a Close button, traps focus, and returns focus to the form, which is then cleared. If storage fails: error and keep the content. If email sending fails after storage: show success (the message is stored) and alert the admin; retry sending.

The form is not a cancellation route; if the message mentions cancelling, the copy email includes one line: “To cancel, the account owner uses Plan & billing.”

Stored messages are viewable in an authenticated admin inbox (owner of the business operating Margins365 only) and are deleted 12 months after receipt.

Acceptance. HC-1 The FAQ is on `/help`, not on Pricing. HC-2 Form validation, limits and spam protection work signed in and signed out. HC-3 Notification arrives at info.marginos@gmail.com with reply-to the visitor. HC-4 The visitor receives the copy. HC-5 Pop-up appears only after storage succeeds. HC-6 No duplicates on double-click.

B.12 Notifications and emails

All sent through Amazon SES `eu-north-1` from the **margins365.com** identity (K73), with SPF, DKIM and DMARC passing. Payment receipts and invoices come from Link (Stripe). No marketing emails exist in v20.

Email	Trigger	To
Verify your email	Email sign-up, email change	Person
Reset your password / Your password was changed / Your sign-in (Google-only)	5.1	Person
Invitation	Owner invites	Invitee
You no longer have access	Owner removes member	Member
Trial started	Checkout complete	Owner

Email	Trigger	To
Trial reminder	3 days before trial end (default)	Owner
Founding price ends soon	14 days before month 6 ends (K72)	Owner
80% of order limit	First time usage crosses 80% in a billing month	Owner and members
Payment failed / final failure	Stripe events	Owner
Cancellation confirmation	Cancel confirmed or provider cancel	Owner; dated notice to members
Data deleted	Wipe completed	Owner's last email
Contact notification / contact copy	Help centre form	info.marginos@gmail.com / visitor

No email offers cancellation by reply. Every email uses `PRODUCT_NAME` and links to margins365.com only.

B.13 Data held, retention and findings

Data	Where	Kept until
Product data per shop	DigitalOcean London	Access end; backups within 7 days
Account, Info, memberships, invites	DigitalOcean London	Account closure; invites 30 days after they end
Cancellation reason	DigitalOcean London	Linked to the account until access end, then kept without any account or personal link for reporting
Founding place record	DigitalOcean London	Account closure; a count without personal data is kept to honour the 100 limit
Contact messages	DigitalOcean London and the info.marginos@gmail.com	12 months after receipt

Data	Where	Kept until
	mailbox	
Legal acceptance (document, version, time)	DigitalOcean London	Account closure, then as a billing record where needed
Billing records	Stripe/Link and our records	As the law requires (UK records: normally 6 years)

F1 (live finding, 11 Nov 2026). The live bundle keeps account and product state (including costs and scenarios) in the browser's localStorage under `marginos.*` keys. v20 requires product data to live server-side; browser storage may hold only UI preferences and a cache that is cleared on sign-out and account closure. Otherwise deletion at access end and per-shop separation cannot be guaranteed.

B.14 SEO and discoverability (K75)

The public site's search requirements are in the companion **`/workspace/v20/Margins365-SEO-v20.md`** (SEO spec v20): prerendered HTML for public routes in B.1 and `noindex` for signed-in routes; exact per-page titles, meta descriptions, H1s, canonicals and robots (SEO 5.1); real `<a href>` links; robots.txt and XML sitemap; real 404 status; 301 redirects to `https://margins365.com`; Open Graph/Twitter tags and image; favicon set and manifest; JSON-LD; `lang="en-GB"`; Core Web Vitals targets (LCP < 2.5 s, INP < 200 ms, CLS < 0.1, in line with 15.2.10); Search Console and Bing. **Status: approved by Akthar, 11 November 2026, 14:38 Europe/London.** The free calculators, keyword landing pages and help articles, the Home H1 and analytics are K76–K79 (B.15–B.18). **No competitor comparison page** (not approved). Acceptance: QA suite SEO.

B.15 Free public profit calculators (K76)

Approved by Akthar, 11 November 2026, 14:38 Europe/London. Four public, free, no-sign-up calculators, each on its own landing page (SEO spec 15.1):

Calculator	Route	Fee presets used (16.2, UK row)
Etsy profit and fee calculator UK	`/etsy-profit-calculator-uk`	Transaction fee 6.5% and regulatory operating fee 0.48% of item + shipping; payment processing 4% + £0.20 of the order total; listing fee $0.20 per unit sold, converted at the ECB rate; optional Offsite Ads 15% or 12% (capped at $100 per order, converted) counted as **ad spend**
Amazon UK fee and profit calculator (FBA	`/amazon-fee-calculator-uk`	Referral fee by category from the 16.2 Amazon table, default "Everything else" 15%, minimum £0.25 per item, on the total the buyer pays

Calculator	Route	Fee presets used (16.2, UK row)
and FBM)		(Development confirms the fee base on sell.amazon.co.uk and records the source, as 16.2 requires); FBA fulfilment, storage and other Amazon fees are **entered by the user per unit** (no FBA preset exists in 16.2), with a link to Amazon's Revenue Calculator
Shopify profit calculator UK	`/shopify-profit-calculator`	Shopify Payments UK online card rate by plan (Basic 2% + 25p default; Grow, Advanced, Plus selectable; Amex/international 3.1% + 25p option)
Ecommerce profit margin calculator UK	`/ecommerce-profit-margin-calculator`	No preset: the user enters a percentage fee and a fixed fee per order

One calculation engine (mandatory). The calculators call the **same calculation module and the same fee-preset and tax-rate configuration** as the signed-in product. They do not re-implement any formula. Rules reused, unchanged: revenue, contribution margin and net profit (12.0); product verdict Healthy / Thin / Losing money (12.2); decimal half-up rounding, money to 0.01 and percentages to 0.1%, rounded only for display (12.3); target price, break-even price and the VAT-inclusive "rounded up to the next 0.01" display (12.3); break-even ROAS = 1 ÷ CM % and break-even ACOS = CM % (12.0); input validation (12.7); fee presets and their "last checked" dates (16.2); UK VAT rates (16.3); currency conversion at the ECB rate (section 6). A change to any of these changes the calculators automatically; the 6-monthly preset recheck (12.3) covers them.

Inputs (one order; defaults pre-filled so the prerendered page shows a worked example): selling price per unit; quantity (default 1); "Prices include VAT" with VAT rate (default: not VAT-registered, so no VAT; UK rates from 16.3 when ticked); shipping charged to the buyer; product cost per unit; packaging per unit; shipping cost the seller pays per order (hidden for FBA orders); expected return cost as % of revenue (default 0%); ad spend per order (default £0); "The platform charges me VAT on its fees" (default **on** for Etsy and Amazon when not VAT-registered, **off** for Shopify Payments processing; label: "Check your fee invoices; not tax advice"); the platform options in the table above; optional units sold per month for a monthly projection.

Outputs: revenue excluding VAT; each fee line and total fees (VAT on fees as its own line where it applies); return cost; contribution margin (£ and %); ad spend; **true profit per order** (net profit before overheads) and net margin; verdict; break-even ROAS and ACOS; **break-even price** and **target price for a 10% margin** (12.3; the user can change the target margin); optional monthly totals; a **Show the maths** panel listing every line with its rate, base and source link. Above the results: "Estimate based on [platform]'s published UK rates, last checked [date]. Not tax or accounting advice."

Behaviour.

- Results update as the user types; changes are announced politely to screen readers (`aria-live`), with no layout shift.
- Calculation runs **in the browser**. Entered numbers are **never sent to the server, stored, put in the URL, or sent to analytics**. A "Copy result" button copies a text summary.
- Invalid input (negative amounts, non-numbers, price of 0) shows the 12.7 message next to the field and hides the results instead of showing nonsense. Return rate is limited to 0–100%.
- If the target price can't be reached (percentage costs + return rate + target margin ≥ 100%), it shows "Not reachable at this margin" (12.3).
- Minimums and caps (Amazon £0.25 minimum referral, Offsite Ads $100 cap) are applied, and the target price is verified by recomputing: the shown target reaches the margin and 1p less does not.
- Calls to action under the results: signed out "See this for every order: start your 14-day free trial" and "Open the Sample shop"; signed in on a trial or paid plan "Go to Control room" (V10: no trial CTA).
- Each page: H1 and metadata from SEO spec 15.1, 600–1,200 words of help text with a worked UK example in £, the fee table with "last checked" date and sources, an FAQ (FAQPage JSON-LD), BreadcrumbList, links to the other calculators, Pricing and the Sample shop. Prerendered (SEO 3). WCAG 2.2 AA, 44 px targets, phone, iPad and desktop (15).

Golden examples (computed with the spec formulas by `/workspace/v20/src/calc_examples_v20.py`; QA uses them, with the stated example exchange rate of $1 = £0.75 entered manually):

Example	Inputs	Expected results
Etsy UK	Not VAT-registered; price £25.00; shipping charged £3.95; product £7.00; packaging £0.60; shipping cost £3.20; returns 2%; no ads; VAT on fees on	Revenue £28.95; fees £4.23 (transaction £1.88, regulatory £0.14, processing £1.36, listing £0.15, VAT on fees £0.71); return cost £0.58; CM £13.34 (46.1%); true profit £13.34 (46.1%), Healthy; break-even ROAS 2.17×; target price £11.05; break-even price £9.28
Amazon UK (FBA)	VAT-registered, prices include 20% VAT; price £19.99; referral 15%; other Amazon fees £3.10 per unit; product £4.50; returns 3%; ads £1.50 per order; VAT on fees off	Revenue £16.66; fees £6.10 (referral £3.00, other £3.10); return cost £0.50; CM £5.56 (33.4%); true profit £4.06 (24.4%), Healthy; break-even ROAS 3.00×; target price £15.83 (incl. VAT); break-even price £13.83
Shopify UK	Not VAT-registered; Basic; price £40.00; shipping charged £4.99; product £12.00; packaging £1.00; shipping cost £4.20; returns 5%; ads £8.00	Revenue £44.99; fees £1.15; return cost £2.25; CM £24.39 (54.2%); true profit £16.39 (36.4%), Healthy; break-even ROAS 1.84×; target price £25.68; break-even price £22.38

Example	Inputs	Expected results
Margin (generic)	Prices include 20% VAT; price £18.00; fee 12% + £0.30; product £6.00; packaging £0.40; shipping cost £2.95; returns 4%; ads £1.00	Revenue £15.00; fees £2.46; return cost £0.60; CM £2.59 (17.3%); true profit £1.59 (10.6%), Healthy; break-even ROAS 5.79×; target price £17.85 (incl. VAT); break-even price £15.67

Acceptance. PC-1 Every golden example gives the expected results exactly. PC-2 The calculators and the signed-in product give the same figures for the same order (shared module). PC-3 No entered value leaves the browser. PC-4 Validation, minimums, caps and "Not reachable" behave as above. PC-5 Presets show their source and "last checked" date. PC-6 Pages meet SEO spec 15.1 and WCAG 2.2 AA.

B.16 Keyword landing pages and help articles (K77)

Approved by Akthar, 11 November 2026, 14:38 Europe/London.

- **Landing pages:** `/profit-leak-checklist` (the six margin leaks, how to spot each in your own orders, what each is worth a month, linking to the Sample shop) and `/multi-channel-profit` (Shopify, Amazon and Etsy in one true-profit view from CSV exports; no store connection). Metadata in SEO spec 15.1. Prerendered, linked from Home, the Help centre and the calculator pages, and listed in the sitemap.
- **Help articles** under `/help/<topic>`: the 10 topics in SEO spec 15.2, about 2 a month. Each has one H1, an "Updated [date]" line, author "Margins365 team", sources for any fee or tax fact, links to related articles, the relevant calculator and Pricing, and BreadcrumbList. Tax content says "Not tax advice"; the VAT article is checked by the accountant before publishing.
- **Accuracy rule:** every fee, tax and product claim matches spec v20 and the 16.2/16.3 tables at publication, with the date checked. Product claims match what the product does today (TikTok stays "coming soon", K53).
- **No competitor comparison page** (not approved). Competitors may be named only where needed for fact (for example "Amazon's own Revenue Calculator").
- **Acceptance.** LP-1 Pages live, prerendered, with SEO 15.1 metadata, in the sitemap. LP-2 Every fact has a source and date. LP-3 No `/compare` page or comparison content exists.

B.17 Home H1 (K78)

Approved by Akthar, 11 November 2026, 14:38 Europe/London. The Home H1 becomes **"Know your true profit and where it leaks"** (replacing "Stop guessing your e-commerce unit economics."). The supporting sentence below it stays as it is. The Product section headline "See where your profit is leaking." (K55) is unchanged. Exactly one H1 on Home. **Acceptance.** H1-1 Home's only H1 reads exactly as above in the prerendered HTML and on every device, without breaking the hero layout (K48 scaling).

B.18 Analytics and the consent banner (K79)

Approved by Akthar, 11 November 2026, 14:38 Europe/London.

Provider: Plausible Analytics (Plausible Insights OÜ, Estonia). Chosen because it sets **no cookies and uses no browser storage**, stores no IP addresses or persistent identifiers (a daily-rotating salted hash counts unique visitors), keeps all visitor data in the EU (Hetzner, Germany; UpCloud, Finland; Bunny CDN, Slovenia) and provides a DPA to every customer (Plausible DPA; EU hosting; compliance). Margins365 is the controller; Plausible is its processor.

Gating (stricter than the law requires, by Akthar's instruction). The analytics script is **not loaded and makes no request** until the visitor clicks **Accept analytics**. This works the same for UK and EU visitors. Reject or no choice means no analytics. A Global Privacy Control signal (`Sec-GPC: 1`) is treated as Reject: the banner is not shown and nothing loads, though the visitor can still opt in through Cookie settings.

Consent banner.

- Shown on the first visit to any public page, at the bottom, without covering the main heading or blocking use of the page (no cookie wall).
- Text: "We'd like to use privacy-friendly analytics (no cookies, no tracking across sites) to see which pages help people. You can change this at any time in Cookie settings." with a link to the Cookie notice.
- Two buttons of **equal size, weight and prominence: "Accept analytics" and "Reject"**. No pre-ticked boxes; closing the banner (X or Escape) counts as Reject.
- The choice is stored in browser local storage as `m365_consent` (value, notice version, date). Storing the choice is strictly necessary and is listed in the Cookie notice. It is asked again after 12 months or when the Cookie notice version changes.
- **Cookie settings** link in the footer (Legal column) reopens the choice at any time; withdrawing is as easy as giving consent and takes effect immediately (the script is removed and no further events are sent).
- Keyboard and screen-reader operable, focus not trapped, WCAG 2.2 AA, 44 px targets; doesn't cause layout shift (CLS < 0.1).
- Signed-in users see the banner only on public pages.

What is measured. Public pages only: `/`, `/sample-shop`, `/pricing`, `/help` and help articles, legal pages, the calculators and landing pages. **No analytics in the signed-in app** (`/app/*`, `/account/*`, `/welcome`, `/invite/*`), on sign-in or reset pages, or in emails. Page views use the canonical URL with no query string. Events (no personal data, no entered numbers): `Calculator used` (property: calculator name), `Start trial clicked`, `Sample shop opened`, `Contact form sent`, `Checkout started`. Never sent: email, names, business names, account or shop IDs, invite or reset tokens, form contents, calculator inputs.

Data and retention. Aggregate statistics only. Margins365 deletes site statistics older than 24 months (manual yearly task until automated). Plausible is added to the Privacy Policy recipients and to the DPA page's list of service providers for Margins365's own website (it does not process Customer shop data).

Legal documents. The Cookie notice, Privacy Policy and DPA & subprocessors page move to **v20.1** (approved texts in `/workspace/v20/`), published in the **same release** that turns analytics on. Until then the site shows v20.

Acceptance. AN-1 No request to Plausible (or any analytics host) before Accept, after Reject, with GPC, or on signed-in pages. AN-2 After Accept, page views and the listed events arrive in Plausible with no personal data or entered values. AN-3 Withdrawal stops sending immediately. AN-4 Banner: equal choices, no pre-ticks, close = reject, re-ask rules, accessible. AN-5 No cookies are set by analytics. AN-6 v20.1 legal texts published with the release.

B.19 Phones, pop-ups, page position, forms and email delivery (K80–K86)

Source. Akthar's iPhone test of the live site on 11 November 2026. K80–K83 and K85 are fixes he asked for. K84 and K86 make his contact and email requests work. Within K84, sending the visitor a **confirmation without their message text** is a Business & Product security recommendation for Akthar to confirm. Live findings are in the v20 change pack under "Live findings behind K80–K86".

B.19.1 Every pop-up works on a phone (K80)

Applies to every pop-up, sheet, drawer and confirmation, now and in future. That includes sign in, sign up, verify, profile completion, forgot password and set new password; plans and free trial; Clear sample data; Delete my shop data; Cancel trial / subscription with the optional reason; the Help centre success pop-up; account menu; shop switcher; invite and remove member; the phone navigation menu; the cookie banner and Cookie settings.

- **Fits the visible screen.** A pop-up is never taller than the part of the screen the user can see. It is sized to the visible viewport (not the full-height `100vh` measure) with a small margin. This holds on iPhone Safari with the address bar shown or hidden, in landscape, and while the on-screen keyboard is open.
- **Scrolls inside.** If the content is longer than the screen, it scrolls inside the pop-up. The title and **Close** stay visible at the top.
- **Buttons always reachable.** The primary and secondary buttons (for example **Start 14-day free trial** and **Not now**) can always be reached without zooming. They are never cut off, and never behind the browser toolbar, the home indicator or the cookie banner. Bottom spacing respects the device's safe area.
- **Page behind stays still.** While a pop-up is open the page behind doesn't scroll, including on iOS, and swipes inside the pop-up don't pass through to the page. Closing it returns the page to exactly where it was.
- **On top of everything.** Pop-ups sit above every other layer, including the sticky header and the cookie banner.
- **Plans pop-up.** On a phone, the user can see which plan is selected next to the trial terms and the button, without scrolling back up. The terms box always names the selected plan and its exact price (D-1).
- **Keyboard and screen reader.** Focus moves into the pop-up and stays there. Escape and Close both close it, and focus returns to the button that opened it. A focused form field is never

hidden by the phone keyboard.
- **Resilient.** Rotating the device, 200% text size and the largest iOS text size keep every control reachable.

Site-wide mobile check (K80). Every public page and signed-in screen is checked at 320, 375, 390, 414 and 430 px wide, on iPad portrait and landscape, and on desktop. Browsers: iPhone Safari (address bar shown and hidden), Android Chrome, Samsung Internet and iPad Safari. Pass means:

- no sideways page scrolling;
- nothing hidden behind fixed bars;
- every button reachable and at least 44 × 44 px;
- forms usable with the keyboard open;
- no pinch-zoom needed for body text;
- in portrait, the sticky header takes no more than about a sixth of the phone screen's height.

Acceptance.

- MOB-1: Each listed pop-up, on iPhone Safari (bar shown and hidden), Android Chrome and iPad, can reach its last control. Close stays visible.
- MOB-2: The page behind doesn't move while the pop-up is open, and is in the same place after closing.
- MOB-3: The cookie banner never covers a pop-up control.
- MOB-4: Keyboard open: the focused field and the submit button are reachable.
- MOB-5: Focus is trapped and returned, and Escape works.
- MOB-6: Site-wide mobile check passes on every page and screen.

B.19.2 The "14 days free" banner is removed (K81)

Remove the sticky banner whose text is exactly **"14 days free. Cancel before day 14 and pay nothing. From £39/mo"**:

- from every page, public and signed in, on every device;
- including its dismiss button and its saved "dismissed" setting.

There is no replacement banner. This supersedes the K43 banner (approved 6 November 2026, 00:34 Europe/Madrid) and the banner lines in 3, 12.5A, 15.3, 15.4, S23 and S46.

What stays. The trial terms required before purchase stay where they are now: the Pricing cards, the trial terms in the plans pop-up, Checkout (K43 Option 1 and the K69 disclosure) and Plan & billing. The header keeps its single primary button (K46). Other live lines that contain "Cancel before day 14" are not the banner, so they aren't removed under K81. The signed-in trial status line (12.5B, "You're on your [Plan] free trial until [date]…") is also not this banner and stays.

Acceptance.

- BN-1: A text search of the built site and the prerendered HTML finds no "Cancel before day 14

and pay nothing. From £39/mo" and no "14 days free." banner.
- BN-2: The header is the top element on every page, with no empty strip.
- BN-3: The trial terms are still shown on Pricing, in the plans pop-up and at Checkout.

B.19.3 Every page opens at the top, instantly (K82, fixes K62)

Any change of page shows the new page **at the very top, instantly, with no animated scrolling**, on every device. "Any change of page" covers:

- the header, footer, Start here and Sample shop buttons, and Pricing buttons;
- the account menu;
- links inside FAQs, Help articles and legal pages;
- email links landing on the site;
- the redirect after sign-in and Stripe returns.

Rules:

- Smooth scrolling is allowed only for jumps within the same page (for example **Compare plans** to the table on Pricing). It must never apply to a page change.
- The top position holds after the new page finishes loading. Late content (lazy sections, images, fonts) must not push the user down.
- The new page's heading isn't hidden under the sticky header.
- For screen readers, focus moves to the new page's main heading.
- Back and forward may restore the previous position (normal browser behaviour). Refreshing a page may keep the position on that page.

Acceptance.

- NV-1: From the very bottom of Home on iPhone Safari, every page change lands at the top with no visible scrolling animation. The position is still the top 2 seconds later.
- NV-2: The same from the bottom of every page, on Android Chrome, iPad and desktop.
- NV-3: In-page jumps still scroll to their target.
- NV-4: Back restores the earlier position.

B.19.4 Suggest a feature is emailed to info.marginos@gmail.com (K83)

Replaces the Q33 store-only default (S58). Suggest a feature stays **signed in only**.

On send:

1. The server checks the text (1–1,000 characters).
2. It stores the suggestion, as today, for the admin list.
3. It sends a notification through SES from the margins365.com identity to **info.marginos@gmail.com**. The recipient is a server setting and is never in the page code.

The notification:

- **Subject:** "Margins365 feature suggestion: [Business name] ([Plan])".
- **Body:** the suggestion text; the submitter's name and account email (taken from the session); business name; plan and status (trial or paid); role (owner or member); number of shops; internal account ID; the date and time (Europe/London); and the screen it was sent from.
- **Reply-To:** the submitter's account email.

Behaviour:

- **Success** is shown in the page: "Thanks, your suggestion has been sent to the Margins365 team." No promise of a reply, and no copy is sent to the user.
- **Failures.** If storing fails, show an error and keep the text. If storing works but sending fails, show success (the suggestion is stored), raise an admin alert and retry automatically until it is sent.
- **Limits.** 5 per account per hour and 20 per day, held in shared storage. A double tap sends once. HTML is shown as text everywhere.
- **FAQ wording** (3.2 and the Help centre): "Signed in, open Suggest a feature, write a short note and send it. It goes straight to the Margins365 team. We can't promise a reply."

Legal follow-up (needs Akthar's approval): the Privacy Policy and DPA list the Gmail mailbox for contact messages only. In the next legal version, add "and feature suggestions" to the Google (Gmail) recipient line, and add a "Feature suggestions" row: account name, email, business name, plan and text; purpose "improve the product"; basis "legitimate interests"; kept 24 months.

Acceptance.

- FS-1: A suggestion arrives at info.marginos@gmail.com with every listed field. Reply-To is the submitter.
- FS-2: It is stored and visible in the admin list.
- FS-3: Signed out, the form isn't offered and the server refuses the request.
- FS-4: The limits hold and a double tap sends once.
- FS-5: The SES-failure path shows success, raises an alert and is delivered after the retry.

B.19.5 Contact us delivers to info.marginos@gmail.com, signed in and signed out (K84; adds to 23.11)

Where this differs from 23.11, this applies.

Sending:

- One form and one server route for both states. The server always sends to **info.marginos@gmail.com** (a server setting); the page never chooses the recipient.
- Sent server-side through SES from the margins365.com identity, From name **Margins365**.
- **Notification subject:** "Margins365 contact: [Name] — [Business name]". It contains every field, and **Reply-To is the visitor's email**, so Akthar can reply straight from Gmail.
- **Signed in**, the notification also shows, taken from the session rather than the form: the account email, the business name on the account, plan and status, role, internal account ID,

and a flag when the form email differs from the account email. **Signed out**, it is marked "Signed-out visitor".

Visitor confirmation (security):

- It is a **confirmation without their message text**. Subject: "We've received your message — Margins365". Body: "Thanks, [Name]. We received your message from the Margins365 Help centre on [date, time]. We read every message, but we can't promise a reply time."
- Add "To cancel, the account owner uses Plan & billing." when the message mentions cancelling.
- Reply-To is info.marginos@gmail.com.
- It contains no message text, phone number or other fields, so the form can't be used to send someone else spam content.
- This replaces "a copy of what they wrote" in 23.11 and HC-4.

On screen:

- **Success pop-up.** It is shown in the page, not in the browser's alert box, and only after the message is stored: "Thanks, [Name]. Your message has been sent. We've emailed a confirmation to [email]." It has a Close button and follows K80. The form is then cleared.
- **Failures.** If storing fails, show an error and keep everything typed. If storing works but the notification fails, show success, raise an admin alert and retry until it is sent; both emails must eventually arrive. A failed visitor confirmation never blocks success.

Spam and abuse:

- A hidden honeypot field and a minimum fill time of 3 seconds. Bot submissions are refused silently.
- Server limits: 5 per IP per hour and 3 per email address per hour, held in shared storage so they survive restarts and work across servers.
- The visitor's IP is taken from Cloudflare's connecting-IP header, never from a value the visitor can set.
- A neutral "please wait" message when a limit is hit.
- Line breaks are removed from name and email (no header injection).
- No third-party captcha.

Message length: 10–5,000 characters, enforced in the page and on the server (live is 4,000).

Legal follow-up (needs Akthar's approval): in the Privacy Policy, change "Answer your message and send you a copy" to "Answer your message and send you a confirmation".

Acceptance.

- HC-7: Signed out and signed in, each send produces exactly one notification at info.marginos@gmail.com, with Reply-To set to the visitor.
- HC-8: Signed-in notifications carry the account context from the session.

- HC-9: The visitor confirmation has no message text.
- HC-10: The in-page pop-up appears only after storage succeeds.
- HC-11: The honeypot, fill time, limits and injection checks hold.
- HC-12: The failure paths behave as above.

B.19.6 Forgot password works end to end (K85; adds to 5.1, 16.5 and K57)

The journey: Sign in → **Forgot password?** → enter email → neutral message → email → link → set a new password → signed in, with other sessions signed out → "Your password was changed" email. It must work on iPhone Safari, Android Chrome and desktop, including when the link is opened on a different device.

Requirements:

- **No browser-only fallbacks** for any account action: sign in, Google sign-in, verification, reset request, set new password or profile save. If the server can't be reached or returns an error, show "We couldn't reach Margins365. Check your connection and try again." and change nothing. Remove the demo routines from the production build.
- **Reset request.** The server always returns the neutral message "If an account exists, we've sent a reset link." for any well-formed email, with similar timing. If SES fails, the server keeps the request, retries, raises an alert and logs it for Development; the user still sees the neutral message, so nothing reveals whether an account exists.
- **Reset link.** The server builds it only from a fixed setting (`https://margins365.com`), **never from a value the browser sends**. It points to a real `/reset-password` page (today that address is 404). The token is removed from the address bar once the page loads, never sent to analytics and never leaked in the referrer.
- **K57 / Q34 rules unchanged:**
- the link lasts 60 minutes and works once;
- older links stop working;
- 3 requests per email and 10 per IP per hour, held in shared storage;
- Google-only accounts get "Your Margins365 sign-in";
- a successful reset signs out every other session and sends "Your password was changed".
- **Email copy:** the brand is one word (the server text still says “Margins 365”). No email asks the reader to "reply to this email", because margins365.com has no inbox. Point to the Help centre instead.

Acceptance.

- PR-1: The full journey works for a real test account on the three platforms.
- PR-2: With the server blocked, every account action shows the error and creates no local session or token.
- PR-3: A reset requested with a forged origin still produces a margins365.com link.
- PR-4: `/reset-password` loads and refreshes. The token is gone from the address bar.
- PR-5: An SES failure still shows the neutral message, raises an alert, and the email arrives after the retry.

- PR-6: The K57 limits, expiry, single use and the Google-only email all behave as specified.

B.19.7 Email sending is set up and proven before release (K86; adds to 20.5.4 and 23.12)

Development does this with Akthar. It blocks release of K83–K85 and every email in 23.12.

1. **SES eu-north-1:** the margins365.com domain identity shows **Verified**. Easy DKIM (3 CNAME records added at the domain's DNS host, GoDaddy) shows **Successful**. The custom MAIL FROM `mail.margins365.com` shows **Successful** (its MX and SPF are already published).
2. **Production access** is granted (out of the sandbox), with a daily quota and sending rate that cover peak use. If the account is still in the sandbox, request production access; AWS asks for the use case, how bounces and complaints are handled and how recipients opted in.
3. **Bounces and complaints** go to a notification destination. Bounced and complained addresses are flagged and not mailed again, and the rates stay below AWS's review levels (bounces 5%, complaints 0.1%).
4. **DNS:** - publish an apex SPF record (`v=spf1 include:amazonses.com ~all`); - keep DMARC at `p=none` but add a reporting address Akthar reads (`rua=`), then move to `p=quarantine` after 2–4 weeks of clean reports.
5. **From and Reply-To:** - From is on margins365.com (for example no-reply@margins365.com), with the name "Margins365". - margins365.com has no inbox (no MX), so Reply-To is set on every email: notifications to Akthar → the sender; everything sent to customers → info.marginos@gmail.com. - No marginos.online identity is used for sending.
6. **Proof before QA.** Send one of each email (verify, reset, Google-only sign-in, password changed, contact notification and confirmation, suggestion notification, invite) to Gmail, Outlook and iCloud. Each must show SPF pass, DKIM pass with `d=margins365.com`, DMARC pass and aligned, and land in the inbox rather than spam. Send one more to an **unverified external address** to prove production access. Attach the SES console screenshots (identity, DKIM, MAIL FROM, account dashboard) to the QA handover.

Acceptance.

- ES-1: The identity, DKIM and MAIL FROM all show verified or successful.
- ES-2: Production access is shown on the account dashboard.
- ES-3: Every listed email passes SPF, DKIM and DMARC at three providers.
- ES-4: Bounce and complaint handling has been tested with the SES mailbox simulator.
- ES-5: The apex SPF and DMARC reporting records are published.

Files

- `/workspace/v20/Margins365-v20-Changes.md` and `.pdf` (this pack)
- `/workspace/v20/Margins365-Spec-v20.md` and `.pdf`
- `/workspace/v20/Margins365-Terms-v20`, `-Privacy-Policy-v20`, `-Refunds-and-Cancellation-v20`, `-DPA-and-Subprocessors-v20`, `-Cookie-Notice-v20` (`.md` and `.pdf`)
- `/workspace/v20/Margins365-SEO-v20.md` and `.pdf` (K75–K79, SEO and discoverability)
- Cookie notice, Privacy Policy and DPA & subprocessors are now **v20.1** (K79), in the same files

- Calculator golden examples: `/workspace/v20/src/calc_examples_v20.py` and `calc_examples_v20_results.txt`
- QA prompt (written separately): `/workspace/Margins365-QA-Prompt-v20` (now includes suite SEO)
- v19 files are unchanged archives.
