Margins365 — SEO & Discoverability Spec v20 (K75–K79)

For	Design & Development (build), QA & Testing (suite SEO in the QA Prompt v20)
From	Business & Product, for Akthar Uddin
Date	11 November 2026 (Europe/London)
Status	**Approved by Akthar Uddin, 11 November 2026, 14:38 Europe/London.** K75 (technical SEO and metadata, Parts A–C) is approved for the v20 build. Also approved: the free calculator pages (K76), the keyword landing pages and help articles (K77), the keyword-based Home H1 (K78) and privacy-friendly analytics behind a consent banner (K79). **Not approved: a competitor comparison page. It has been removed from this document.**
Baseline	Spec v20 (K59–K74), route map 23.1, Cookie notice v20, QA Prompt v20

Requirements and acceptance criteria only: no code, no UI design. Nothing here changes prices, limits, formulas or legal texts.

> **Honest note.** No one can guarantee a #1 ranking on Google or Bing. Rankings depend on competitors, links, content quality and search-engine changes outside our control. This spec makes Margins365 **fully crawlable, correctly described and fast**, which is the part we control. Content and reputation (Part D and E) build rankings over months, not weeks.

---

1. Answer to Akthar's question

Are we fully SEO-optimised today? No. The live site has a meta description and a page title, and nothing else. Search engines see **one blank page** for every address. Section 2 lists what was checked. The fixes are in sections 3–13 and are written so the developers can build them inside v20.

---

2. Audit of the live site (11 November 2026, 14:24–14:30 Europe/London)

Method: fetched `index.html`, `robots.txt`, `sitemap.xml`, the v20 routes and unknown paths with curl; rendered Home, Pricing and Help in headless Chrome; ran Lighthouse 12 (mobile, simulated throttling) locally on Home. The Google PageSpeed Insights API refused the request (daily quota exceeded), so **there is no Google field data (CrUX)**; the site probably has too little traffic for it

anyway. Read alongside the live bundle `/workspace/app.js`.

2.1 Findings, most important first

#	Finding	Evidence	Effect	Fixed by
A1	**The HTML has no content.** Every address returns the same 771-byte shell (`<div id="root"></div>`); all text is drawn by JavaScript.	curl of `/`, `/pricing`, `/help`, `/legal/terms` returned identical HTML (same checksum).	Google can render JavaScript, but later and less reliably; Bing, social previews (LinkedIn, WhatsApp, X, Facebook) and many AI crawlers read only the HTML and see nothing.	§3
A2	**No real pages.** `/pricing`, `/sample-shop`, `/help`, `/legal/terms` all show Home after rendering.	Rendered DOM of `/pricing` and `/help` = Home (same H1).	Only one page can ever rank.	§4 (K63)
A3	**No links a crawler can follow.** The rendered Home has **0 `<a href>` links and 28 buttons**; navigation is button clicks.	Rendered DOM.	Crawlers cannot discover any other page even after routing is built.	§11
A4	**Soft 404s and fake files.** Unknown paths, `/robots.txt`, `/sitemap.xml`, `/favicon.ico` and `/site.webmanifest` all return **200 with the Home HTML**.	curl status codes.	Lighthouse marks robots.txt invalid; Search Console will report soft 404s; there is no sitemap.	§6, §7, §9
A5	**Same title and description on every address**, and the brand is spelled with a space: `Margins 365 — margin leak diagnosis`.	`index.html`.	Breaks K59; no page-specific relevance; "margin leak diagnosis" is not a phrase sellers search for.	§5
A6	**No canonical, no Open Graph or Twitter tags, no structured data, no web manifest, no hreflang.** `lang="en"` rather than `en-GB`.	`index.html`.	Shared links show no image or proper title; no brand/knowledge signals.	§5, §8, §9, §10
A7	**www and non-www both serve the site (200), with no redirect.** `/pricing/` also returns 200 alongside `/pricing`.	curl.	Duplicate URLs split signals.	§7

#	Finding	Evidence	Effect	Fixed by
A8	**Speed is close to, but not at, the target.** Lighthouse mobile: Performance 89, **LCP 2.9 s (target ≤ 2.5 s)**, FCP 2.5 s, TBT 130 ms, CLS 0.079, total 372 KiB, unused JavaScript ≈ 164 KiB. JS 256 KB compressed (871 KB raw), CSS 25 KB compressed.	Lighthouse JSON.	LCP fails the "good" threshold on mobile.	§12
A9	**Nothing is cached at the edge.** HTML and hashed assets are sent with `cache-control: private` and Cloudflare reports `BYPASS`.	Response headers.	Every visitor waits for the origin; slower repeat visits.	§12
A10	**No security headers** (HSTS, CSP, X-Content-Type-Options, Referrer-Policy, frame protection). A 401 console error appears on every signed-out page load (the session check).	Headers; Lighthouse "errors in console".	Lighthouse Best Practices 96; HSTS also matters for the http→https rule. Already QA gap G10.	§7, §12
A11	**Icons are incomplete.** `/favicon.png` is 32×32 only; `/favicon.ico` is the Home HTML; `/brand/icon-512.png` does not exist (returns HTML); apple-touch-icon points to a 192 px file.	curl.	Poor icons in Google results, bookmarks and home screens.	§9
A12	**marginos.online now 301-redirects with the path and query kept** (`/pricing` → `margins365.com/pricing`), cached for 24 h. `www.marginos.online` fails the TLS handshake. When the domain is cancelled (K73) the redirect stops.	curl.	Fine for now. Old links stop working after cancellation.	§7
A13	**Good already:** viewport tag, theme colour, images have alt text, Lighthouse accessibility 100, Brotli compression, HTTP/2 and HTTP/3, origin response ≈ 120 ms.	Lighthouse, headers.	Keep.	—
A14	**Not verified from our network:** plain `http://` requests returned 500 from the test network's proxy, so the http→https	curl.	QA checks from a normal connection (SEO-12).	§7

#	Finding	Evidence	Effect	Fixed by

redirect could not be confirmed.

Lighthouse's own SEO score is 92 because it only checks basics (title, description, status, robots.txt); it does not see A1–A3, which matter most.

---

3. Rendering: static HTML for public pages (fixes A1)

Google's guidance is that server-side or static rendering is the reliable option, and that dynamic rendering (serving bots a different version) is a workaround it no longer recommends (Google: JavaScript SEO basics; Google: Dynamic rendering as a workaround).

Requirements

1. **Prerender (static generation at build time) or server-render** every **public** route: `/`, `/sample-shop`, `/pricing`, `/help`, `/legal/terms`, `/legal/privacy`, `/legal/refunds-and-cancellation`, `/legal/dpa`, `/legal/cookies`, the 404 page, and the K76 calculator and K77 landing and help pages when they go live. Development chooses the method.
2. The HTML each route returns **before JavaScript runs** contains: the full visible text of the page (H1, headings, body copy, plan prices, FAQ answers, legal text), the header and footer navigation as real links, the page's own `<title>`, meta description, canonical, robots, Open Graph/Twitter tags and JSON-LD (sections 5, 8). The app then hydrates the same markup.
3. **Same content for people and bots.** No user-agent switching (cloaking). The prerendered page is the signed-out version; signed-in header changes (K67) happen after hydration, in space reserved so nothing shifts (CLS, §12).
4. **Live values.** The founding "[n] places left" count (K72) is either rendered by the server at request time or loaded after hydration in a reserved slot. Prices in the HTML are the standard prices plus the founding line exactly as shown to signed-out visitors.
5. **Signed-in app stays client-rendered** and is never indexed: `/app/*`, `/account/*`, `/welcome`, `/invite/*` (section 6).
6. Legal pages are HTML pages (K74). Their **Download PDF** files are not indexed separately (`X-Robots-Tag: noindex` on the PDF responses), so the HTML page is the one that ranks.

Acceptance: SEO-01, SEO-02, SEO-03.

---

4. Clean URLs (matches the v20 route map, 23.1)

- One address per page, lower case, hyphens, **no trailing slash** (except `/`), no `#` routing, no tracking parameters in internal links.

- Public routes exactly as 23.1: `/`, `/sample-shop`, `/pricing`, `/help`, `/sign-in`, `/reset-password`, `/legal/terms`, `/legal/privacy`, `/legal/refunds-and-cancellation`, `/legal/dpa`, `/legal/cookies`.
- `/sample-report` (old name) 301 → `/sample-shop`.
- Unknown paths return a real **404** status with the branded 404 page (A4), never Home with 200.
- Help topics, if they become separate pages later, live under `/help/<topic>`.

---

5. Per-page metadata (fixes A5)

Rules for every public page

- `<title>` ≤ 60 characters, unique, keyword first and **Margins365** (one word) included. Google truncates by pixel width, not a fixed count, so ≤ 60 is a safe target (Google: title links).
- Meta description ≤ 155 characters, unique, a true summary of the page (Google: meta descriptions). Google may rewrite it; that is normal.
- Exactly **one H1** per page, matching the page topic; H2/H3 in order without skipping levels.
- `<link rel="canonical">` = the absolute `https://margins365.com/...` address of the page itself.
- `<meta name="robots">` as in the table. The signed-in app also sends `X-Robots-Tag: noindex`.
- `<html lang="en-GB">`.
- Founding-offer wording is **not** put in titles or descriptions (it ends after 100 places and search results would go stale).

5.1 Exact proposed titles, descriptions and H1s (existing v20 pages)

Page	`<title>`	Chars	Meta description	Chars
Home	Margins365 | True Profit & Margin Leaks for Online Sellers	58	See your true profit across Shopify, Amazon and Etsy, and the margin leaks costing you most, in pounds. UK pricing inc VAT. 14-day free trial.	142
Sample shop	Sample Shop: A Margins365 Profit Diagnosis	42	Explore a sample shop's true profit, Health Score and margin leaks ranked by £ cost a month. Sample data, no sign-up needed to look.	132
Pricing	Margins365 Pricing: Plans from £39 a Month inc VAT	50	Starter £39, Growth £79, Pro £129, Scale £199 a month including VAT. Every plan starts with a 14-day free trial. Cancel in Plan & billing.	138
Help centre	Help Centre: Billing, Limits & Contact |	51	Answers on order limits, billing, trials, shops, seats, uploads and cancelling	129

Page	<title>	Chars	Meta description	Chars
	Margins365		Margins365, plus a contact form for anything else.	
Terms	Terms of Service | Margins365	29	The terms for using Margins365: plans, the 14-day trial, the founding offer, billing, cancellation and your data. Version 20.	125
Privacy Policy	Privacy Policy | Margins365	27	How Margins365 collects, uses, stores and deletes personal data under UK and EU GDPR, who processes it and how to use your rights.	130
Refunds & cancellation	Refunds & Cancellation Policy | Margins365	42	How to cancel a Margins365 trial or plan in Plan & billing, when access ends, when data is deleted and when refunds apply.	122
DPA & subprocessors	Data Processing Agreement & Subprocessors | Margins365	54	The Margins365 data processing terms and the current list of subprocessors, what each one does and where data is processed.	123
Cookie notice	Cookie Notice | Margins365	26	The essential cookies and browser storage Margins365 uses, what each one does and how long it lasts. No advertising cookies.	124
Sign in	Sign in | Margins365	20	Sign in to Margins365 with your email and password or with Google.	66
Reset password	Reset your password | Margins365	32	Reset the password for your Margins365 account.	47
404	Page not found | Margins365	27	This page doesn't exist. Go to the Margins365 home page, pricing or help centre.	80

Route, robots and H1

Page	Route	Robots	H1
Home	/	index,	Know your true profit and where it leaks

Page	Route	Robots	H1
		follow	(K78)
Sample shop	`/sample-shop`	index, follow	What a Margins365 diagnosis looks like (unchanged)
Pricing	`/pricing`	index, follow	Margins365 plans — 14 days free on every tier (unchanged apart from the brand spelling)
Help centre	`/help`	index, follow	Help centre
Terms	`/legal/terms`	index, follow	Terms of Service
Privacy Policy	`/legal/privacy`	index, follow	Privacy Policy
Refunds & cancellation	`/legal/refunds-and-cancellation`	index, follow	Refunds & cancellation
DPA & subprocessors	`/legal/dpa`	index, follow	DPA & subprocessors
Cookie notice	`/legal/cookies`	index, follow	Cookie notice
Sign in	`/sign-in`	noindex, follow	Sign in
Reset password	`/reset-password`	noindex, nofollow	Reset your password
404	`(any unknown path)`	noindex	We can't find that page

H1s marked "unchanged" are the current headings. The Home H1 changes to "Know your true profit and where it leaks" (K78, approved; spec 23.17).

---

6. robots.txt and indexing (fixes A4)

Serve `/robots.txt` as `text/plain`, status 200, with exactly:

```
User-agent: *
Allow: /
Disallow: /app/
Disallow: /account/
Disallow: /invite/
Disallow: /welcome
Disallow: /api/

Sitemap: https://margins365.com/sitemap.xml
```

- `/sign-in` and `/reset-password` stay crawlable but carry `noindex` (so the noindex can be seen). Reset-token URLs never appear in links or the sitemap.
- Staging sites send `X-Robots-Tag: noindex, nofollow` on every response **and** require a password, so they never get indexed. Production must not inherit that header (SEO-07).
- AI crawlers: no blocking by default (being cited by AI answers helps discovery). Akthar can opt out of AI training crawlers later without affecting Google Search.

7. Redirects and canonical host (fixes A7, A12, A14)

From	To	Type
`http://margins365.com/*`, `http://www.margins365.com/*`	`https://margins365.com/*` (same path and query)	301, in one hop
`https://www.margins365.com/*`	`https://margins365.com/*`	301
Trailing slash, e.g. `/pricing/`	`/pricing`	301
Upper case, e.g. `/Pricing`	`/pricing`	301
`/sample-report`	`/sample-shop`	301
`https://marginos.online/*`, `http://marginos.online/*`, `www.marginos.online/*`	`https://margins365.com/*` (same path and query)	301, until the domain is cancelled (K73)

- **HSTS** on margins365.com: `max-age` at least one year, `includeSubDomains` after checking every subdomain works on HTTPS. Preload only with Akthar's agreement (hard to undo).
- `www.marginos.online` currently fails TLS: either add it to the certificate so the redirect works, or accept that it will stop when the domain goes.
- After marginos.online is cancelled, nothing can redirect from it. Before cancelling, use Search Console's **Change of Address** tool from the old property, if it was ever verified, so Google moves signals to margins365.com.

8. Open Graph, Twitter cards and the OG image

Tags on every public page: `og:title` (same as `<title>` without " | Margins365" where it would repeat), `og:description` (= meta description), `og:url` (= canonical), `og:type` = `website`, `og:site_name` = `Margins365`, `og:locale` = `en_GB`, `og:image`, `og:image:width` = 1200, `og:image:height` = 630, `og:image:alt`; `twitter:card` = `summary_large_image`, `twitter:title`, `twitter:description`, `twitter:image`, `twitter:image:alt`. No `twitter:site` until a real X account exists.

OG image spec (Design produces):

- 1200 × 630 px, PNG or JPG, under 300 KB, absolute HTTPS URL on margins365.com, served with a long cache.
- Brand teal `#34726B` / navy `#061F45`, the Margins365 logo, one line of text: "True profit and margin leaks for online sellers". Keep text inside the centre 1000 × 520 px (some apps crop).
- One default image for all pages; optional variants for Pricing ("Plans from £39 a month inc VAT. 14-day free trial") and Sample shop (a sample-data screenshot labelled "Sample data").
- No founding-offer price in the image (it ends).

9. Favicons and web manifest (fixes A11)

File	Size	Use
`/favicon.ico`	16, 32 and 48 px in one file	Old browsers, Google results
`/icon.svg`	vector	Modern browsers (`rel="icon" type="image/svg+xml"`)
`/apple-touch-icon.png`	180 × 180, no transparency	iPhone and iPad home screen
`/icon-192.png`, `/icon-512.png`	192, 512	Manifest, Android
`/icon-maskable-512.png`	512, logo inside the central 80%	Android adaptive icons
`/site.webmanifest`	—	`name` "Margins365", `short_name` "Margins365", `start_url` "/", `display` "browser" (it is not an installable app), `theme_color` `#34726B`, `background_color` `#FFFFFF`, the icons above

Use the approved teal "M" set in `/workspace/brand/` (`icon-green-square-*`, `icon-180-ios.png`). Each file returns its real type with 200 (not the Home HTML). Google shows a site's favicon in results if it is at least 48 × 48 and crawlable.

10. Structured data (JSON-LD)

Validate with Google's Rich Results Test and the Schema.org validator. Values must match what the page shows.

Type	Page(s)	Properties	What it can earn
Organization	/	`name` "Margins365", `url`, `logo` (512 px PNG), `email` (contact address, once Akthar confirms which), `sameAs` (only real social profiles). No address or company number until Akthar publishes them.	Brand/logo understanding, knowledge panel signals
WebSite	/	`name` "Margins365", `alternateName` "Margins 365" (helps people who type it with a space), `url`. No SearchAction (there is no site search).	Site name in results
SoftwareApplication (`WebApplication`)	/, /pricing	`name`, `applicationCategory` `BusinessApplication`, `operatingSystem` "Web browser", `url`, `description`, `offers`: one `Offer` per plan in **GBP**, `price` 39.00 / 79.00 / 129.00 / 199.00, `priceCurrency` GBP, a `UnitPriceSpecification` with `billingDuration` P1M and `valueAddedTaxIncluded` true, plus annual 390 / 790 / 1290 / 1990 with P1Y.	Understanding only, for now (see note)
FAQPage	every page that shows an FAQ (Help centre's Hard limits & billing FAQ; any FAQ left on Pricing)	Each visible question and answer, word for word	**No rich result:** Google's Search Central changelog says the FAQ rich result "will no longer appear in Google Search starting May 7, 2026" and its documentation has been removed (Google Search Central: latest updates, 8 May and June 2026 entries, verified 11 November 2026; also reported by Search Engine

Type	Page(s)	Properties	What it can earn
			Journal). Still valid Schema.org; may help other engines and AI answers. Low cost, so keep it.
BreadcrumbList	every page except Home	Home › Page (and Home › Legal › Terms etc.)	Breadcrumb path in results

Note on ratings. Google's software-app rich result **requires a rating or review** (Google: SoftwareApplication). Margins365 has none yet, so it will not get star results. **Never add made-up ratings**: it breaks Google's rules (manual action) and UK law on fake reviews. Add `aggregateRating` only when genuine reviews are shown on the page.

11. Links, headings, images and accessibility (fixes A3)

- **Every navigation item is a real link** (`<a href="/pricing">`), including header, footer, "Start here" buttons that go to pages, Sample shop and Help links. Buttons are only for actions (submit, open a menu, toggle). Links can still route client-side without reloading.
- **Descriptive link text** ("See pricing", "Open the Help centre"), never "click here".
- **Internal linking map:** Home → Sample shop, Pricing, Help centre; Pricing → Help centre FAQ, Terms, Refunds & cancellation; Sample shop → Pricing; Help centre → Pricing, every legal page; every page → footer links (Help centre, Sign in, five legal pages). K76 and K77 pages link to Pricing, Sample shop and each other, and Home links to each platform page.
- **Headings:** one H1, logical H2/H3 order (also WCAG 2.2 "Info and relationships").
- **Images:** every content image has an alt describing it ("Sample shop Control room showing a Health Score of ..."); decorative images have empty alt. Charts have a text summary nearby. Width and height set to prevent layout shift.
- Images in WebP or AVIF with a fallback, sized for the screen (`srcset`), lazy-loaded below the fold, the hero/LCP image never lazy-loaded.
- These overlap with WCAG 2.2 AA (spec 15): lang attribute, link purpose, headings, alt text and contrast. Lighthouse accessibility is 100 today; keep it there.

12. Speed: Core Web Vitals (fixes A8–A10)

Targets (75th percentile, mobile): LCP < 2.5 s, INP < 200 ms, CLS < 0.1 — Google's "good" thresholds (Google: Core Web Vitals). Today: LCP 2.9 s (fails), TBT 130 ms (INP can't be measured in a lab; TBT is the proxy), CLS 0.079 (passes, small margin).

Requirements

1. Static HTML (§3) so text paints before JavaScript downloads.

2. Split the JavaScript: public pages must not download the signed-in app, charts or import code. Target ≤ 150 KB compressed JS on public pages (today 256 KB, with about 164 KB unused).
3. Cache hashed files in `/assets/` for one year (`public, max-age=31536000, immutable`) and let Cloudflare cache them. Cache prerendered public HTML for a short time (for example 5 minutes) and purge on deploy. Signed-in and API responses stay `private, no-store`.
4. Preload the main font (or use a system font stack), `font-display: swap`; preconnect only to origins actually used on the first view.
5. Reserve space for the signed-in header, founding counter and any banner (CLS).
6. Do not call the session check on public pages for signed-out visitors in a way that logs a console error (A10); a quiet "not signed in" response is fine.
7. Security headers on every HTML response: HSTS, `X-Content-Type-Options: nosniff`, `Referrer-Policy: strict-origin-when-cross-origin`, frame protection (`frame-ancestors 'none'` in CSP or `X-Frame-Options: DENY`), and a Content Security Policy that allows Stripe and Google sign-in. Already QA SEC-20–24.
8. Measure with Lighthouse on Home, Pricing, Sample shop and Help centre before each release; after launch, watch the Search Console Core Web Vitals report (real users).

13. Search Console, Bing and analytics consent

Google Search Console (Akthar's Google account owns it; developers get user access):

1. Add a **Domain property** for `margins365.com`, verified with a DNS TXT record at the DNS provider (Cloudflare).
2. Submit `https://margins365.com/sitemap.xml`.
3. URL-inspect and **Request indexing** for each public page after launch.
4. Watch: Page indexing (soft 404s, duplicates), Core Web Vitals, HTTPS, Enhancements (Breadcrumbs), Manual actions.

Bing Webmaster Tools: import the site from Search Console (fastest) or verify with DNS; submit the same sitemap. Bing's index also supplies results to Yahoo and several smaller search engines. Optional: IndexNow to tell Bing about updates instantly.

XML sitemap at `/sitemap.xml` (`application/xml`, 200): only the indexable public pages in §5.1 (`/`, `/sample-shop`, `/pricing`, `/help`, the five `/legal/...` pages, and Part D pages once live), absolute `https://margins365.com` URLs, a real `lastmod` from the last content change. No `priority` or `changefreq` (Google ignores them). Never signed-in, sign-in, reset or PDF URLs.

hreflang: the site has one language. Add `hreflang="en-GB"` and `hreflang="x-default"`, both pointing to the page itself, on every public page and in no other form. Google says hreflang is only needed for alternative language or region versions, so this is tidy rather than a ranking factor. Add other languages only with separate translated pages later.

Analytics and cookies (K79, approved). Search Console and Bing need no cookies and no code on the page. Analytics uses **Plausible Analytics** (EU-hosted, no cookies, no stored IP addresses) and loads **only after the visitor clicks "Accept analytics"** on a consent banner with equal Accept and

Reject buttons, for UK and EU visitors alike. No analytics in the signed-in app. The Cookie notice, Privacy Policy and DPA page move to v20.1 in the same release. Full requirements: spec 23.18.

- Background on the law: in the UK, since the Data (Use and Access) Act 2025, analytics used only for aggregate statistics can run without prior consent if visitors are told and can opt out (ICO: exceptions); EU ePrivacy rules are stricter. Gating on consent meets both.

---

14. Keyword research

14.1 How this was done and its limits

Web searches on 11 November 2026 for each candidate phrase, reading who ranks and what the pages do (search intent). **No source we can access publishes search volumes for these phrases**, so **this document gives no volume numbers**. To get them: Google Keyword Planner (free with a Google Ads account), or a paid tool such as Ahrefs or Semrush; after launch, Search Console shows the real searches that bring visitors. Rankings seen here also vary by location and person.

14.2 Keyword map

Cluster	Phrases (primary first)	Intent	Who ranks now (from our searches)	Opportunity for a new site, and target page
Brand	margins365, margins 365	Navigational	margins365.com already appears for "margins365" in a search index, with the old "Margins 365" title	**Must win.** Achievable once §3–§10 are built. Page: /
Profit leaks (our positioning)	ecommerce profit leak, shopify profit leak audit, margin leakage ecommerce, where is my profit going	Informational, problem-aware	Ecommerce Fastlane, Groundwork Metrics, Ad-Lab, StoreBuilt (UK), MarginLab (search)	**Best fit.** Small sites rank; matches the "six margin leaks" product exactly. Page: / now; /profit-leak-checklist (Part D)

Cluster	Phrases (primary first)	Intent	Who ranks now (from our searches)	Opportunity for a new site, and target page
True profit	true profit calculator, true profit ecommerce, net profit per order	Tool / informational	Margeny's "true profit calculator"; **TrueProfit is a competitor's brand name**, so "true profit" alone is ambiguous	Medium. Use "true profit" in copy, but don't build around the bare brand term. Page: /, Part D
Shopify	shopify profit calculator (uk), shopify profit margin calculator, shopify fees calculator uk	Tool	**Shopify's own calculator** (shopify.com/tools/profit-margin-calculator), Calcrux, MiniWebtool, Margeny, Bundly (search)	Hard for the head term (Shopify's authority). Realistic for the **UK + VAT** long tail if a free calculator exists. Page: /shopify-profit-calculator (Part D)
Amazon UK	amazon fee calculator uk, amazon fba calculator uk, amazon profit calculator uk vat	Tool	**Amazon's own Revenue Calculator** and sell.amazon.co.uk/pricing, plus Atlassa (UK/EU) (Amazon UK pricing; Atlassa)	Hard for the head term. Possible for "with VAT", "FBA fees 2026", the fuel surcharge change (1.5% → 2% from 2 Nov 2026). Page: /amazon-fee-calculator-uk (Part D)
Etsy UK	etsy profit calculator uk, etsy fee calculator uk, etsy fees uk vat	Tool	**Only small independent sites**: SellerFeesCalc, CraftKept, FreeEtsyCalculator, FeesLab (SellerFeesCalc; CraftKept)	**Most realistic platform win.** No big brand owns it; UK detail (VAT on fees, 0.48% regulatory operating fee) is already in spec 16. Page: /etsy-profit-calculator-uk (Part D)
Margin (generic)	ecommerce profit margin calculator uk, profit margin calculator vat,	Tool / informational	Small UK tool sites (No-Cap Tools, Scale Oxford, PayoutMath)	Good, if the page has a working calculator. Page: /ecommerce-profit-margin-

Cluster	Phrases (primary first)	Intent	Who ranks now (from our searches)	Opportunity for a new site, and target page
	contribution margin ecommerce			calculator (Part D)
Multi-channel	shopify amazon etsy profit dashboard, multi-channel profit tracking uk	Commercial	BeProfit is the named multi-channel option in comparison posts (Tera Ads comparison)	Good differentiator: three platforms, £, VAT, no store connection. Page: /multi-channel-profit (Part D)

14.3 Competitors (prices from their pages or recent reviews; USD unless stated)

Competitor	Focus	Entry price	Trial / free	Source
TrueProfit	Shopify net profit	$35/month (300 orders)	14-day trial	Tera Ads
BeProfit	Shopify + Amazon + WooCommerce, multi-shop	$49/month (450 orders)	14-day trial	Tera Ads
Lifetimely (AMP)	Shopify profit + LTV	Free plan; $49/month (500 orders); Amazon +$75	Free plan	Shopify App Store
Sellerboard	Amazon only	$19/month (3,000 orders); EU prices exclude VAT	1-month trial, no card	sellerboard.com; Method FBA
Profit Calc	Shopify	$39/month (500 orders)	15-day trial	ProfitShield comparison

Where Margins365 can win in search: UK-first (GBP, VAT-inclusive prices, UK fee rules), **Etsy** coverage (the big Shopify tools don't target Etsy), Shopify + Amazon + Etsy in one view, no store connection needed (CSV), and the "margin leak in £ a month" angle. **Where it can't easily win:** head terms owned by Shopify and Amazon's own calculators, and the bare "true profit" term.

---

15. Part D — Content plan (approved: K76 calculators, K77 landing pages and help articles)

Approved by Akthar on 11 November 2026, 14:38 Europe/London. These are built and published **after the core v20 QA pass**, and each goes live only after its own QA checks (suites PCALC and SEO). Calculator requirements: spec 23.15; landing pages and articles: spec 23.16.

15.1 Landing pages (proposed metadata)

Page	`<title>`	Chars	Meta description	Chars
Shopify landing	Shopify Profit Calculator UK, with Fees & VAT | Margins365	58	Work out true profit on Shopify after product cost, Shopify Payments fees, shipping, ads, refunds and VAT. In pounds, for UK sellers.	133
Amazon landing	Amazon UK Fee & Profit Calculator (FBA and FBM) | Margins365	60	See what each Amazon UK sale leaves you after referral, FBA, storage and digital services fees, ads, returns and VAT.	117
Etsy landing	Etsy Profit Calculator UK with VAT on Fees | Margins365	55	Etsy UK profit after transaction, processing, listing and regulatory operating fees, VAT on fees, postage and Offsite Ads.	122
Margin cluster	Ecommerce Profit Margin Calculator UK | Margins365	50	Gross margin, contribution margin and true profit per order for online sellers, with UK VAT handled correctly. Free to use.	123
Profit leak cluster	Ecommerce Profit Leak Checklist | Margins365	44	The six margin leaks that cost online sellers most, how to spot each one in your own orders and what it is worth a month.	121
Multi-channel	Shopify, Amazon & Etsy Profit in One Place | Margins365	55	One true-profit view across Shopify, Amazon and Etsy from your own CSV exports. No store connection needed. Built for UK sellers.	129

Page	Proposed route	H1
Shopify landing	`/shopify-profit-calculator`	Shopify profit calculator for UK sellers
Amazon landing	`/amazon-fee-calculator-uk`	Amazon UK fee and profit calculator
Etsy landing	`/etsy-profit-calculator-uk`	Etsy profit calculator for UK sellers

Page	Proposed route	H1
Margin cluster	`/ecommerce-profit-margin-calculator`	Ecommerce profit margin calculator
Profit leak cluster	`/profit-leak-checklist`	Find the profit leaks in your shop
Multi-channel	`/multi-channel-profit`	Shopify, Amazon and Etsy profit in one place

- The four calculator pages carry a **working free calculator** that uses the product's own calculation module and fee presets (K76, spec 23.15), so the word "calculator" in the title matches what searchers want.
- Each page: 600–1,200 words of genuinely useful content, a worked UK example in £, the fee table with "last checked" date and source links (as spec 16 does), a link to the Sample shop and Pricing, FAQ section, BreadcrumbList.
- **No competitor comparison page** (not approved by Akthar).
- TikTok Shop: no landing page until the importer passes the K53 restore gate.

15.2 Help articles and guides (`/help/<topic>`; 2 a month is realistic)

1. How Margins365 works out true profit (links to the formulas in plain English).
2. How to export orders from Shopify / Amazon Seller Central / Etsy (one each; also cuts support).
3. Amazon UK seller fees in 2026, explained (referral, FBA, storage, fuel surcharge, digital services fee).
4. Etsy UK fees explained: VAT on fees and the regulatory operating fee.
5. Shopify Payments fees in the UK.
6. Break-even ROAS and maximum cost per order.
7. Contribution margin vs gross margin for online sellers.
8. The six margin leaks and how to fix each one.
9. Reading your Health Score.
10. VAT basics for marketplace sellers (clearly "not tax advice"; accountant review, as spec 12.8).

Each article: one search topic, a clear H1, date updated, author "Margins365 team", links to related articles and Pricing.

16. Part E — Listings and links (approved, after QA passes)

Where	Fit today	Note
G2	Yes	Free vendor profile; ask real customers for reviews (no incentives that

Where	Fit today	Note
		break G2's rules or UK fake-review law).
Capterra (with GetApp and Software Advice, one Gartner listing)	Yes	Free basic listing; categories "Ecommerce analytics", "Profit analysis".
Product Hunt	Yes, once	Launch day after QA passes and the site is stable; prepare the OG image, screenshots and Sample shop link.
Shopify App Store	**Not today**	Listing requires a real Shopify app built on Shopify's APIs and passing Shopify's review. Margins365 uses CSV uploads, so this needs its own product spec (a Shopify integration) before it can be built; it is not part of K75–K79. Biggest single source of Shopify merchants if built.
Amazon Selling Partner Appstore, **Etsy app listing**	Not today	Same: needs API integration.
Others	Yes	SaaSHub, AlternativeTo, BetaList, UK small-business and ecommerce directories; guest articles and podcasts for UK seller communities; a free calculator (Part D) is the most linkable asset.

Avoid paid link schemes and link swaps: they break Google's spam policies.

---

17. Build checklist for Development (K75)

1. Prerender/SSR public routes (§3) — after K63 routes.
2. Real `<a href>` links everywhere (§11).
3. Per-page head tags from §5.1, canonical, robots, `lang="en-GB"`, hreflang (§5, §13).
4. robots.txt, sitemap.xml, real 404 status (§4, §6).
5. Redirects and HSTS (§7).
6. OG/Twitter tags and image; favicons and manifest (§8, §9).
7. JSON-LD (§10), validated.
8. Speed and caching (§12), Lighthouse ≥ 90 performance on mobile with LCP < 2.5 s.
9. Hand Akthar the DNS TXT records for Search Console and Bing; he verifies and submits the sitemap (§13).
10. K78 Home H1 with the prerendered Home page.
11. K79 consent banner, then Plausible analytics, with the v20.1 Cookie notice, Privacy Policy and DPA page in the same release.

12. QA runs suites SEO, CONS and ANL (QA Prompt v20) with the core v20 pass.
13. After the core pass: K76 calculators (QA suite PCALC), then K77 landing pages and help articles (SEO checks per page).

18. Sources

- Google Search Central: JavaScript SEO basics; Dynamic rendering as a workaround; Title links; Meta descriptions; Core Web Vitals; SoftwareApplication structured data.
- Search Engine Journal, Google drops FAQ rich results (10 May 2026).
- ICO, Storage and access technologies: exceptions.
- Search results pages and competitor pages cited in section 14 (all read 11 November 2026).
- Live audit files: `/workspace/v20/audit/seo/` (Lighthouse JSON, rendered DOM), `/workspace/app.js`.

Prepared by Business & Product for Akthar Uddin. Requirements only: no code, no UI design, no changes to the site.
